Contributors

Ellen T. Baird is a professor emerita of art history at the University of Illinois at Chicago. She is the author of *The Drawings of Sahagún's "Primeros Memoriales": Structure and Style* (University of Oklahoma Press). Her articles on the Sahaguntine corpus drawings consider the implications of gridded space, the representation of history, and the transformation of the pictorial text, as well as the identity of the indigenous artists. With Cristián Roa-de-la Carrera, she cocurated the 2016 exhibition *The Aztecs and the Making of Colonial Mexico* (Newberry Library, Chicago; <http://www.newberry.org/aztecs-and-making-colonial-mexico>). Her work in progress focuses on the depiction of disease in the Florentine Codex.

Molly Bassett is an associate professor in the Department of Religious Studies at Georgia State University. Her book *The Fate of Earthly Things: Aztec Gods and God-Bodies* was published by the University of Texas Press in 2015. Her work focusing on the intersection between religion and the natural world in Aztec (Nahua) culture has appeared in *Material Religion*, *History of Religions*, and *Religion Compass*. With Vincent Lloyd, she coedited *Sainthood and Race: Marked Flesh, Holy Flesh* (Routledge, 2014).

Elizabeth Hill Boone, a specialist in the art of the Aztecs of Mexico and their method of writing with images rather than letters and words, holds the Martha and Donald Robertson Chair in Latin American Art at Tulane University. Among her many edited and coedited books are

Writing without Words and *Their Way of Writing: Scripts, Signs, and Pictographies in Pre-Columbian America*. Among her single-authored books are *The Codex Magliabechiano*, *Stories in Red and Black: Pictorial Histories of the Aztecs and Mixtecs*, and *Cycles of Time and Meaning in the Mexican Books of Fate*.

Pablo Escalante Gonzalbo is a professor and researcher at the Universidad Nacional Autónoma de México. He specializes in the transformation of indigenous art and culture in the sixteenth century, especially syncretism in religious art. His many publications include *Los códices mesoamericanos antes y después de la conquista española: Historia de un lenguaje pictográfico* (Fondo de Cultura Económica, 2010). Most recently, his article "La cruz, el sacrificio y la ornamentación cristiano-indígena: Luces sobre un taller de alfarería de mediados del siglo XVI en el Valle de México" appeared in the *Anales del Instituto de Investigaciones Estéticas*, no. 113.

Diana Magaloni Kerpel studied restoration and mural painting at the Instituto Nacional de Antropología e Historia in Mexico City and earned her graduate degrees in art history from the Universidad Nacional Autónoma de México and Yale University. Her research examines Mesoamerican and indigenous pictorial techniques in the sixteenth century. She has written extensively on pre-Hispanic mural art and the Florentine Codex. Dr. Magaloni served as the director of the Museo Nacional de

Antropología in Mexico City and is now the director of the Program for the Art of the Ancient Americas at the Los Angeles County Museum of Art.

Barbara E. Mundy is a professor of art history at Fordham University. With Dana Leibsohn, she cocreated the online resource *Vistas: Visual Culture in Spanish America, 1520–1820*. Her recent book *The Death of Aztec Tenochtitlan, the Life of Mexico City* (University of Texas Press, 2015) was awarded prizes from the Latin American Studies Association, the Association for Latin American Art, and the Conference on Latin American History; the book has been published in Spanish as *La muerte de Tenochtitlan, la vida de México* (Grano de Sal, 2018).

Guilhem Olivier is a research professor at the Institute of Historical Research at the Universidad Nacional Autónoma de México. He has authored *Mockeries and Metamorphoses of an Aztec God: Tezcatlipoca, “Lord of the Smoking Mirror”* (University Press of Colorado, 2008) and *Cacería, sacrificio y poder en Mesoamérica: Tras las huellas de Mixcoatl* (Fondo de Cultura Económica; UNAM, 2015). On Sahagún’s work, he recently published “The Mexica Pantheon in Light of Graeco-Roman Polytheism: Uses, Abuses, and Proposals,” in *Altera Roma: Art and Empire from Mérida to Mexico*, edited by John M. D. Pohl and Claire L. Lyons (Cotsen Institute of Archaeology Press, 2016).

Jeanette Favrot Peterson, a research professor at the University of California, Santa Barbara, focuses on pre-Columbian and colonial Latin American visual culture. She has authored *The Paradise Garden Murals of Malinalco* (1993, Charles Rufus Morey Book Award) and *Visualizing Guadalupe: From Black Madonna to Queen of the Americas* (2014); and she coedited, with Dana Leibsohn, *Seeing Across Cultures: Visuality in the Early Modern Period* (2012). Her most recent publications on Sahagún’s work include “Crafting the Self: Identity and the Mimetic Tradition in the Florentine Codex” (2003) and “Translating the Sacred: The Peripatetic Print in the Florentine Codex” (2018).

Eloise Quiñones Keber is a professor emerita of art history at the City University of New York’s Baruch College and the Graduate Center, where she taught pre-Columbian and colonial Latin American art. Her research and publications center on Aztec (Nahua) art before and

after the conquest and issues involved in the intersection between indigenous and European art and cultural traditions in colonial central Mexico. She is the author of *Codex Telleriano-Remensis: Ritual, Divination, and History in a Pictorial Aztec Manuscript* and editor of several books and numerous articles dealing with early colonial Mexican manuscripts, including the works of Sahagún.

Ida Giovanna Rao received a laureate degree in Italian philology and wrote her dissertation on the *Profugiorum ab aerumna* of Leon Battista Alberti. Appointed library conservator in the Biblioteca Medicea Laurenziana of Florence, she worked on the study, cataloguing, and restoration of the library’s rare codices. Recently, she served as director of the Laurentian Library. She also taught codicology for two years at the University of Lecce. Her numerous publications range from codicological analyses and critical studies of manuscripts for facsimile editions, to catalogues of the holdings of the Laurentian Library and those of other institutions, including the Biblioteca Apostolica Vaticana.

Lisa Sousa is a professor of history at Occidental College, where she teaches colonial Latin American history. She is the author of *The Woman Who Turned Into a Jaguar, and Other Narratives of Native Women in Archives of Colonial Mexico* and is a cotranslator and coeditor of *Mesoamerican Voices: Native-Language Writings from Colonial Mexico, Oaxaca, Yucatan, and Guatemala* and *The Story of Guadalupe: Luis Laso de la Vega’s “Huei tlamahuiçoltica” of 1649*. She has published articles on indigenous women of Mexico and the conquest of Mexico. Her current research focuses on iconoclasm and violence in colonial Mexico.

Kevin Terraciano is a professor of history and the director of the Latin American Institute at the University of California, Los Angeles, where he received his PhD. He specializes in colonial Latin American history, especially Mexico, and indigenous writings and languages of Mesoamerica (Nahuatl, Mixtec, and Zapotec, in particular). He is the author of *The Mixtecs of Colonial Oaxaca* and several prizewinning publications and has received many awards for his teaching and graduate mentoring at UCLA. He is a founding member of the Digital Florentine Codex Project, directed by the Getty Research Institute in Los Angeles.

Index

Notes: Topics in *italic type* separated by a “/” symbol represent singular/plural forms of the Nahuatl word. Page numbers in *italics* indicate topics represented in images or image captions.

- acculturation: and dual legacy of codex imagery, 28, 33; Europeanization of Nahua imagery, 33, 85, 88, 96; rhetoric as, 180–181
- acuitlachtli* (water bear) anecdote, 125, 133–136
- adulteress (*tetzaubcioatl*), 17, 186, 195–196, 197
- agriculture and irrigation, 127, 128
- Ahuelitocztin, 58–59
- ahuiani* (“one who indulges in pleasure”), 185, 186, 189, 195–196. *See also* prostitutes
- Ahuitzotl, 50, 98, 127–128
- Albricus (philosopher), 10, 101–102
- Alcántara Rojas, Berenice, 116–117, 158
- Alciato, Andrea, 64, 72–73
- Alfonso X (Alfonso el Sabio, monarch), 11
- altepetl* (communities), 2, 4, 128, 145
- Alvarado, Pedro de, 56–57, 118
- Álvares Cabral, Pedro, 122n73
- amanteca* (feather artisans), 111
- Anderson, Arthur, 2, 12, 25–27, 60n6
- Androvandi, Ullisse, 10
- Anglicus, Bartholomeus, 9, 11, 95
- animals: *acuitlachtli* (water bear) anecdote, 125, 133–136; *ocelotl* (jaguar/ocelot), 16, 63–64, 147–150; parts of and mythic powers, 63, 149–150; sources used for textual representations, 63–64; taxonomy (Nahua) and symbolism of, 148–150; water-associated, 133. *See also* feathers
- annals histories as sources, 54, 61n54, 96–97, 98, 99, 107

Acknowledgments

Among the colleagues who taught and helped us from the start were John V. Murra and Donald F. Solá. We thank them deeply. For discussions, communications, clarifications along the way, and the occasional productive disagreement, we owe our thanks to many scholars, including but not limited to Rodolfo Cerrón-Palomino, the late Antonio Cusi-huamán, Roswith Hartmann, Bruce Mannheim, María Rostworowski de Diez Canseco, John H. Rowe, Karen Spalding, John J. Swetnam, Jan Szemiński, Gerald Taylor, Lorena Toledo, Terence Turner, Freda Y. Wolf, and R. Tom Zuidema. Blenda Fe-

menias' able editing is greatly appreciated. To the late John Treacy, who compiled the map, we owe a special and lasting debt of gratitude. And we thank our students for many good questions.

We also thank our institutional benefactors: the National Endowment for the Humanities, the Instituto de Estudios Peruanos in Lima, and the University of Wisconsin's Institute for Research in the Humanities as well as its Cartographic Laboratory. The William F. Vilas Trust Estate afforded valuable support through its Associateship program. All shortcomings, of course, are our own.

THE HUAROCHIRÍ MANUSCRIPT

Introductory Essay: The Huarochirí Manuscript

Frank Salomon

The manuscript as testament

The Huarochirí manuscript alone of all colonial sources records a prehispanic religious tradition of the Andes in an Andean language. It tells us of a remote age when cannibal deities preyed on otherwise immortal humans, of the mountain deity Paria Caca who emerged to expel the fire deities of antiquity, of the human groups that traced their victories from Paria Caca's five simultaneous avatars, of Paria Caca's brotherhood with the fivefold female power Chaupi Ñamca, and of the society ritually organized in their names around a grand complementarity of male and female superhumans. It unfolds the splendor of ceremonies that prehispanic priests devoted to a landscape alive with the diverse sacred beings called *huacas*. It recalls memories of Inca rule and of how unknown invaders, the Spanish, brought new gods to displace the children of Paria Caca and of Chaupi Ñamca. Nothing else in all the sources from which we seek the Andean "vision of the vanquished" (Wachtel 1971) rivals it for immediacy, strangeness, and beauty.

But the voices we hear in its pages do not relay to us a verbatim record of what was said and believed before the Spanish invasion. It is true that when Father Francisco de Avila reworked part of the same or similar testimony to make his 1608 *Treatise on the False Gods* . . . (hereafter referred to as *Tratado*), he judged that the narrative "does not refer to the present but to history" (Arguedas and Duviols 1966: 198). Yet the way people recalled their ancient tradition and the occasion of their recalling it were themselves facets of a colonial situation the tellers had already endured throughout their whole lives. The telling could not but be influenced by the seventy preceding years of colonial turbulence, during which one potent innovation

was the art of writing itself. Andean peoples used no writing before the Spanish "Vira Cochas" arrived. So the process of capturing their culture as text in the alphabet of the padres and bureaucrats was inextricably bound up with forced conversion and persecution, even when the actual authors were themselves Andean and the actual narrators at least partly faithful to the old *huacas*.

The manuscript is a complex composite testimony of these changes as well as a compendium of ancient memories. The research it contains was apparently sponsored by a clerical persecutor, Father Francisco de Avila, who seems to have used it as secret intelligence for his assault on American deities from 1608 onward. The text does contain opportune denunciations of "idols" (as the Spanish called the sacred beings of the Andes) and of those who steadfastly fed and served them in secret long after official conversion. Yet at least one of the actual makers of the text seems to have thought of the task as one of historical remembrance. The untitled preface to the manuscript looks to a future in which the ancient deities would be remembered with pride, promising a monument of Andean greatness to match Spanish chronicles:

If the ancestors of the people called Indians had known writing in earlier times, then the lives they lived would not have faded from view until now.

As the mighty past of the Spanish Vira Cochas is visible until now, so, too, would theirs be.

But since things are as they are, and since nothing has been written until now,

I set forth here the lives of the ancestors of the Huarochiri people, who all descend from one forefather;

What faith they held, how they live until now, those things and more.

Village by village it will all be written down: how they lived from their dawning age onward.

One gets a strong impression that the creator of these lines was engaged in reconceptualizing the Andean mythic tradition rather than destroying its memory.

The exact process of composition is unknown, but this passage differs from the wholeheartedly anti-Andean viewpoint that Avila expressed in other writings. It may contain the words of a native writer or editor to whom Avila gave some leeway in compiling the text. A measure of unselfconscious candor would have increased its intelligence value. Whether or not he was present at its composition, Avila did read and annotate at least part of it; his devastating subsequent attacks on the deities mentioned suggest that the stratagem of leaving the witnesses some freedom of expression succeeded. But the text's partly intra-Andean genesis also had a paradoxical long-term effect: because it was composed in relative independence from Spanish preconceptions about native religion, it has in the end provided a uniquely authentic monument of the very beliefs Avila meant to destroy.

Whoever composed the untitled preface thought of the manuscript as a totalizing book about inherited tradition, custom, and lifeways that would give Andean memory, like Spanish literate memory, immortal visibility. The usual genre term by which the text identifies the separately remembered and narrated traditions could hardly be more oral; it is *simi*, which the greatest Quechua lexicographer of the age glossed as "mouth, language, commandment, law, mouthful, news, the word and its answer" (González Holguín [1608] 1952: 326). Clearly the testimonies are products of a culture in which orality encompassed the weightiest functions of language. But the book is not conceived simply as a body of speech on paper. It partakes of the assumption that written language, and specifically book language, should subsume and subordinate orality. The conception of a totalizing book that underlies the manuscript seems to be influenced at one or more levels by the Hebrew or Old Testament Bible and to some extent by the New Testament. Of course, few Indians studied the Vulgate. But the Huarochirí area had been missionized with special intensity by Jesuits in 1570–1571, with the conscious intent of popularizing Christian lore in Quechua. In the late sixteenth century, both officially promulgated catechetical summaries and popular-

ized summaries of Bible stories called *historias sagradas* were widely read by or read to laypeople. Literate Indians c. 1600 usually knew traditions from both Hebrew antiquity and the New Testament through publications of the Third Council of Lima. Those who had access to churchmen's libraries or discussions could learn much more.

Although the manifest content of the manuscript only rarely syncretizes biblical material with Andean, the text as a whole has an "astonishingly Biblical" overall architecture (Turner 1988: 249). Like the Bible, the manuscript begins with myths that contrast the human condition with an imagined alternative, a time when the relations between humans and deity were radically different (chaps. 1, 2). A flood myth (chap. 3) signals the end of this era. Like the Bible, the manuscript pictures antiquity as the story of hero-ancestors who share a common descent and a covenantlike relation to an ethnic deity (including an episode resembling Abraham's averted sacrifice of Isaac; chap. 8, secs. 99–103). Its collective subject is a set of groups, each of which considered itself the progeny of a focalized ancestor. As with the biblical tribes, these groups relate to each other, at least in ideology, approximately as a phratry. As in the biblical redactions, their disparate traditions of origin and separate cults have been welded *ex post facto* onto the unifying argument of kinship and imperfectly articulated with apical priestly cults. Their story, like that of the biblical tribes, is intensely concerned with control over specific resources in a sacralized landscape, many of its myths encode political struggles with surrounding peoples and even internecine struggles as mythic combats with superhuman intervention. Also like the Bible, the manuscript is greatly concerned with the relation between the local *sacra* and the leaders and priests of immense invading empires—first the Inca, later the Spanish. The manuscript shares the biblical tendency to accrete genre within genre. Texts about priesthood, sacrifice, ritual law, and prophecy jostle with vernacular myth, claims concerning land and water, and mythicized remembrance of historic events. Bits of oracular response, religious formulas, and perhaps songs have become embedded in the text, too. And finally, as in the Bible, particularly the Deuteronomic books and later prophets, one clearly senses the pressure of contemporary political defeat on religious testimony.

We do not know all the reasons for the resemblances. One possibility is that Father Avila imposed European opinions on the text itself or indirectly on others who processed it (for example, by

preparing a questionnaire or by overseeing the editing). Much European opinion of the time held that pagan myths, Andean ones included, reflected ancient traces of "true" (that is, biblical) religious and historical knowledge, which Satan's deceptions had distorted in intervening centuries. The tendency to force non-Christian testimony into patterns congruent with "universal history" and a unified Bible-based chronology is conspicuous in many Peruvian chronicles, both indigenous and Spanish, and Avila's *Tratado* shows that he partook of it (Arguedas and Duviols 1966: 206–208). The person who arranged or edited the myths expressed frustration at the difficulty of arranging episodes into one scheme of chronology (e.g., chap. 14, sec. 189; chap. 15, sec. 199), a step required for correlation with Bible-centered history. This literal-minded historicist reading of myth, which seems misleading to modern readers, was then thought to be a correct way of restoring American data to their "true" place in a unified world scheme of salvation history.

But above and beyond this exogenous process, the myths themselves seem Bible-like in their style of mythifying. Like the biblical writers, and unlike some myth-tellers from more "tribal" Amazonian societies, the Huarochirí narrators tend to intertwine mythic (miraculous) processes with social causation, rather than locating them in a primordial age before the world began to be as it is. Perhaps the likeness is multilayered or overdetermined: it may result in part from intra-Andean facts distinguishable from the European influences that also affected it. Such forms of synthesis may arise endogenously in societies of a certain scale, setting, and organizational form. Terence Turner (1988) offers a complex argument that a generically rather than locally biblical type of mythology occurs in societies whose status is intermediate between autonomy and complete subsumption in larger states; certainly this was the condition of Huarochirí-area societies for many centuries before the European invasion.

There is a third possibility for explaining the biblical parallel. After seven decades of exposure to European culture, Andean people had consciously or unconsciously gone far in reconceptualizing their mythology as a systematic response to imposed belief. By 1600 this reconceptualization seems to have coalesced into a distinctive ideology. Andean literati of the first generation born after conquest—Felipe Guaman Poma de Ayala and Joan de Santa Cruz Pachacuti Yamqui Salcamaygua—were not simple nativists; they partook of a Renaissance consensus in arguing that Andean people had

already passed through ages of antiquity strictly parallel to those of pre-Christian biblical antiquity. But they dissented from the Spanish in their evaluation of the Andean achievement as a part of it. Where writers like Avila, Cabello Valboa, or Antonio de Calancha saw in Andean myth only a deteriorated and diabolically confused memory of original connections with biblical humanity, and therefore a culture worthy of being forgotten, some native intellectuals believed their history and its memory to be not only parallel with that of the Spanish, but equal in value. The theories of these bicultural "native chroniclers" shored up waning hopes of Andean privilege under Christian rule and appear characteristic of Andean natives descended from noble families but deprived of colonial power. Although we do not know the identity of the person(s) who selected the oral material for inclusion and/or wrote the ethnographic and editorial material in the manuscript, the final redaction of the text does seem to partake of this mentality.

And what of those who actually told the myths to the book creators? What revisions of religious thought had occurred among less bicultural natives during these decades? It is important to remember that by the date when the manuscript was written the cults of the *huacas* had coexisted with Christianity for a whole lifetime. If *huaca* priests had retained the loyalty of people officially bound to Christianity, it was in all likelihood because they had succeeded, under the adverse conditions of clandestinity and church hegemony, in presenting *huaca* religion as comparable in cogency with the church's teachings. It is possible that by 1600 local thinkers and perhaps priests had been engaged (consciously or not) in remobilizing and reconceptualizing the inheritance of *huaca* religion so as to construe it as a *religion*, a "faith" (as the preface to the manuscript says, using the Spanish word) whose overall claims and dimensions could bear comparison with those of the imposed church. It is not beyond possibility that the welding of the Andean deities into a unified kindred partook of post-1532 efforts. Individual *huaca* myths seem to accord the *huaca* cults many of the same attributes as Christian religion: for example, a covenantal concept of obligation, an image of superhuman action as law giving, a notion of history as the continuing interaction of deity and society, and a tendency to express "moral economy" norms in terms of prophetic action. As has been suggested, it is likely that any or all of these may be overdetermined facts, arising from preexisting, and now remobilized, prototypes in aboriginal culture as well as

from European models. Perhaps there would have been an Andean story like the rescue of Isaac even if Spaniards had never invaded. Nonetheless, it would be unrealistic not to consider apologetic processes arising in *huaca* priests' efforts to match Catholic priests in the breadth of their claims while at the same time maintaining distinctness from Catholicism. The importance of such interactive processes in sustaining *huaca* religion is attested by Father Avila's remark that the *huaca* cults thrived most not in the areas where they had remained unmolested, but in the villages where Catholic priests had been most zealous (Arguedas and Duviols 1966: 205).

Despite the importance of all these factors, in the end nothing could be more wrong than to think of the manuscript as merely an Andean counter-Bible. For one thing, obviously, the mythic material overall is radically foreign to Europe; few books in the world give the Western reader such a powerful sense of encountering a cultural unknown. Another and more fundamental reason is that the structuring of myth—the formal architecture of event and process that gives each story internal regularity and resolution—owes everything to Andean patterns and resembles biblical ones little if at all. The dominant model in the stories is that of passage from mere difference (for example, the juxtaposition of antagonistic deities strange to each other) to complementary difference (for example, a revised juxtaposition in which the deities become male and female spouses or siblings embodying opposite ecological principles). This pattern occurs at the greatest and smallest levels of the mythology, in domains from the cults of apical deities Paria Caca and Chaupi Ñamca to the household relationship between in-laws. To imagine this pattern consistently applied to the battles of biblical Adonai is difficult. Comparison with non-Andean South American material (a task scarcely begun) may offer another path to the isolation of underlying prehispanic content. R. Tom Zuidema (1977: 44–47) argues that some Huarochirí myths share specific structures with a myth of the Brazilian Bororo, presumably because the two mythologies share roots much older than Spanish domination.

Andean religion and "Inca religion"

Much of what is published (especially in English) about prehispanic and colonial Andean religion treats the terms "Inca" and "Andean" as near synonyms. Vira Cocha, popularized as the invisible

"creator god of the Incas" (Demarest 1981; Pease 1986; Rowe 1960; Szemiński 1985b; Urbano 1981) fascinated colonial Spaniards who thought they detected in him a possible intuition via "natural religion" (MacCormack 1985) of Christendom's supreme deity. This idea still absorbs modern scholars captivated by the sophistication of Tawantinsuyu, the Inca Empire. The Incas partly persuaded non-Inca Andean people, too. As we learn from chapters 18, 19, 20, 22, and 23, the Incas tried to reorganize local cults into a hierarchy capped by Inca numina, and partly succeeded. Indeed, their persuasions lasted longer than their sovereignty. By the mid-colonial era, when Inca rule had receded into the golden mists of ideological nostalgia, many Peruvian Indians themselves came to recall the deified Sun and his incarnation the Inca god-king as compelling symbols of native identity and native glory (Flores Galindo 1987).

But in order to interpret the Huarochirí manuscript one must appreciate that the equation between Inca religion and Andean religion is an ideological sleight. The invisible Vira Cocha relates to Andean religious life somewhat as the Prime Mover Unmoved does to Mediterranean saint cults. At the summit of priestly and imperial society, prayers like Pachacuti Yamqui's stirring Inca invocations ([1613] 1968: 287–288, 292, 294) to the unseen source of order and beauty may have voiced metaphysical questions that we define as preeminently religious. But the religious life of most of the people who made up Tawantinsuyu's innumerable subject "nations" had little to do with abstract or universalizing expressions. Worship usually focused on sacred beings peculiar to particular kin groups, villages, mountains, canals, and so forth. In fact, religious particularism, expressed in terms of place and descent, lies at the heart of much Andean myth. No doubt discourse of this sort can embody philosophical concerns, no less readily than overtly metaphysical expressions do. But the content is only available by a route that leads through the study of what particular places or mummies (etc.) meant.

This village-based, particularistic version of Andean religious thinking saturates the Huarochirí text. The world that the Huarochirí myth-tellers imagined was structured in terms of grass-roots geography and of genealogy—their pastures and valley lands, their mythicized family tree. The unity of the text, such as it is, is achieved by an attempt (perhaps on the part of the priests called *yancas*) to locate the historically diverse *huacas* and their cults in Paria Caca's and Chaupi Ñamca's regional hierarchy and genealogy. Other traditions—the

lordly priesthood of the Incas, the onset of Catholicism—are seen through the filter of such local and regional concerns. For long stretches the viewpoint belongs to one group, one collective ego: a group called the Checa, devotees of the ceremonial center Llacsa Tambo, resident (at least nominally) in and around the Spanish resettlement village of San Damián, who considered themselves children of Paria Caca while retaining origin myths apparently separate from his cult (chap. 24). Some of the ritual complexes and myths attached to local features—especially to springs, lakes, and canals—have survived with great vitality into modern times and have been studied by ethnographers (Gelles 1984; Ortiz Rescaniere 1977). For example, the modern descendants of the Concha, who live in an outlying hamlet of San Damián de Checa, still maintain today both the myth and the ritual attached to the lake that feeds their irrigation canals (see chap. 31).

The durability of these myths reflects the Huarochirí people's tenacious attachment to the local resources on which they depend. But it is possible after all to exaggerate the local quality of the myths. Paria Caca was not uniquely the deity of the peoples who speak here; he and his sanctuary were renowned throughout a wide swath of the central and southern Andes. It is likely that, when worshipers from Llacsa Tambo went on pilgrimage to him, they met worshipers from many other places and that their own practice had something in common with that of different kinds of "people called Indians." The same applies to the great coastal shrine Pacha Camac and to Cuni Raya, sometimes called Vira Cocha. Even when the names, episodes, and personalities seem peculiar to Huarochirí, the tellers' general religious concepts (e.g., classes of shrines, types of action attributed to deities and heroes, duties of humans to *huacas*) are shared among a wider spectrum of Andean societies, including, for example, groups in the Arequipa and Cuzco areas. In these limited senses, while it is mistaken to take the Huarochirí myths as expressions of a pan-Andean religion, one may take them as representative of broader Andean cultural premises and tendencies that are manifest even in apical Inca cults. The sharing of underlying concepts makes possible ethnographic comparison with societies beyond the bounds of Huarochirí Province, both as seen in past times (for example, via the "extirpation of idolatry" trials that postdate the manuscript; see Duviols 1986) and as witnessed by modern ethnographers (see, for example, Valderama and Escalante 1988, who have studied in distant Arequipa a complex resembling the water cults in chapter 31).

General outline of the Huarochirí manuscript

The Huarochirí manuscript appears not to be the product of polished editing, but neither is it a jumble. With the possible exception of the two unnumbered chapters here called supplements I and II, it seems to be a fair copy edited and in the process of further editing for coherence as a unified narrative. The unification is, however, in many respects incomplete and imperfect. The editor's original intent seems to have been to treat ancient matters earlier in the text and recent ones later, but sometimes when turning to a new source (e.g., at the beginnings of chaps. 13, 24, and 31) he is forced to return to a different origin story. Recollections of past ritual practice and interpolated bits of current ethnographic observation further complicate the text by introducing into many narrations, with specious smoothness, references to times other than the time of the main narrated story. Moreover, the manuscript is full of second thoughts (cross-outs and interlineations, marginalia), tangents, overlaps, cross-references, marginal queries (probably by Father Avila), and cryptic allusions. For all these reasons, to appreciate the coherence of a theme one often must pull together partial accounts from disparate chapters. For this purpose the index supplied by the translators may be useful.

Early times and peoples

The preface (untitled in the original) promises to tell the achievements and beliefs of "the people called Indians" from their "dawning age" up to the present, village by village.

The first chapter sketches the world as it was before the present human race appeared. People lived forever (after a five-day temporary death), at the price of sacrificing half their children to the fire-monster Huallallo Caruíncho. At that time, too, the subtropical abundance of the lower valleys extended far up into the heights. This whole rich and cruel world order would be destroyed with the advent of Huarochirí's great deity Paria Caca.

Huallallo's dominion is grouped with other stories of remote antiquity: chapter 2 tells how the Trickster-demiurge Cuni Raya, who "almost matches" the figure of Vira Cocha, passed through the landscape and through the lives of the female deities he seduced. In a Christian-influenced interlude (chap. 15), Cuni Raya, as Vira Cocha, is credited, almost parenthetically, with originally creating nature in an empty universe. Chapter 3, telling the myth of the deluge, and chapter 4, telling of the

Sun's disappearance, end the section dedicated to remote antiquity.

The Paria Caca cycle and the myths of group identity

The mythic cycle that forms the unifying core of the text tells the apparition of Paria Caca (chap. 1, sec. 6; chap. 5, secs. 72–73), the fivefold deity who symbolized inclusive ethnic unity among the tellers' various residential and kinship groups. Like many great Andean deities, he is a mountain, a majestic double-peaked snowcap visible on the eastward horizon from the heights of Huarochirí. Many groups venerated him. We hear most about the Checa who gathered at Llacsa Tambo, but chapter 13 concentrates on a relatively distant cluster of villages, the Mama region in the lower Rímac valley. Chapter 30 is a myth of the Allauca, and chapter 31 copiously recounts the viewpoint of the Checa's neighbors, the Concha.

Paria Caca first appeared as five eggs that became five falcons that became five men, the founders of the human groups who appear as the main collective protagonists. These groups are sometimes spoken of in ways suggesting clanlike or sib-like qualities and together, within Paria Caca's cultic organization, are seen as a phratrylike collectivity of groups who "all descend from one forefather" (pref., sec. 2). But before calling them clans one should be careful to note that the text uses no term clearly translatable as 'clan' and that, although the manuscript uses the unilineal idiom for certain limited purposes, other principles of descent, marriage, and residence appear to play at least as important a role in defining groups.

Paria Caca was a stormy being of the heights. He made himself known to humans by favoring a poor man with power to defeat the rich (chap. 5), or, in another tradition, by saving a Huallallo worshiper from the obligation to sacrifice his child (chap. 8). He first appeared on a mountain in what was formerly the domain of the lowland aborigines called Yunca, which was dominated by the (possibly Huanca) deity Huallallo (chap. 5, secs. 38, 55). Once his bond with some of these people was formed, Paria Caca ascended to Huallallo's seat on the high cordillera. There he attacked and expelled the ancient cannibal deity in a world-shaking combat between storm water and volcanic fire (chap. 6, sec. 74; chap. 8; chap. 9, sec. 110; chap. 16, secs. 203–209; chap. 17, secs. 214–219). He carved out in this struggle the titanic landscape of snowcaps

and lakes that is his seat and his likeness. It became the sanctuary on the icy heights to which his pilgrims brought their llamas (chap. 9, secs. 119, 127, 138–139; chap. 24, secs. 309–310; chap. 28, sec. 364). Huallallo, exiled, was left to the care of a rival ethnic group called the "dog-eating Huanca" (chap. 9, secs. 110–111; chap. 16, sec. 209). The victorious Paria Caca in his multiple incarnations swept down from the windy heights through the various fertile valleys of the Pacific slope (chap. 8). As he went, he subjected the Yunca to his own people, expelling many of them, reorganizing their lands, creating a cultic order in which both victors and vanquished would participate, and winning the Yunca wealth (e.g., chaps. 9, 25).

What human movements does the Paria Caca mythology allegorize? In a series of highly original studies María Rostworowski de Diez Canseco (1978: 31–147) has interpreted the narratives as reflections of a large and gradual prehistoric movement in which pre-Incaic highlanders of the ethnic group called Yauyo worked their way downward and southwestward, from their early home on the high tundras at the Cañete River headwaters, through various warm irrigated valleys (including the Mala, Lurín, and Rímac valleys, which form the heartland of the mythology), toward the Pacific shore and its rich deltas. Using independent and ostensibly non-mythical bureaucratic records she has been able to document Yauyo populations all over the territory of the manuscript and has mapped their major territorial divisions as understood in the mid- to late sixteenth century (Rostworowski 1988: 56–57). One of these Yauyo populations (that of Chaclla) attested a folk history closely resembling stories in the manuscript (Rostworowski 1988: 54–57).

Linguistic indices are less clear but also suggest some association between Paria Caca's mythology and a Yauyo expansion. Traces of Aymara-like lexicon and phonology in the Huarochirí manuscript indicate that the informants knew or were influenced by the same ethnic language whose modern forms persist as residual "islands" in old Yauyo territory (Gentile Lafaille 1976: 14).

In Inca and early colonial times those natives who classed themselves as Yauyo regarded the focal area of the manuscript, especially what later became the parish of Santa María Jesús de Huarochirí, as the very core of Yauyo political space. The early colonial Yauyo do not seem to have had a king or center of political command, but Yauyo witnesses said that in conducting intranative diplomacy their ancestors had recognized the Ninavilca lords of Huarochirí village as paramount authorities for sev-

eral generations. In 1558, Cristóval Malcachagua of Huarochirí gave unambiguous testimony that the Ninavilcas meant to rally "all the Yauyos" in defending Yauyo coca claims in the middle Chillón valley against Huamantangas and Spaniards (Rostworowski 1988: 94). "Yauyo" is the only term the manuscript uses in categorical contrast to the ethnic terms for foreign neighbors (the various Yunca groups, the Huaman Tanca, and the Huanca; supp. II, sec. 485). All this evidence seems a *prima facie* reason for treating the manuscript as substantially an artifact of Yauyo culture.

On first inspection Paria Caca does appear to be simply the chief deity of these Yauyo populations, ennobled by Inca patronage but still very much an ethnic symbol. Felipe Guaman Poma de Ayala thought of him so ([1615] 1980: 1:241). And when Maca Uisa himself, one of Paria Caca's "sons," asked the Inca to dance a priestly dance essential to the Paria Caca cult, he told the Inca to dance it "the way our children from the Yauyo do" (chap. 23, sec. 297).

Nonetheless, one must account for some striking slippages in the association between Paria Caca and Yauyo identity. The predominant tellers of the Huarochirí myths, the Checa, thought the ancient founders of their leading kindreds were not Yauyo but Yunca. They scorned the Yauyo kindreds in Checa as half-wild nomads and barely tolerated their presence in the pilgrimage to Paria Caca (chap. 24, secs. 305–309) until Paria Caca himself taught them to respect the newcomers. In neighboring Concha, "Yauyo country" was a byword for a remote and fruitless backwater (chap. 31, secs. 391, 408). Perhaps such scorn reflects the fact that by 1586 the self-identified Yauyo had shrunk to a tiny ethnic minority comprising only about 5% of the 7,000 tributary households in the huge province to which they gave their name (Dávila Brizeño [1586] 1965: 155).

How should one read these seeming contradictions? One clue is that although the Checa narrator applied the word "Yauyo" to immigrants whose exact place of origin in Yauyos Province was still remembered, and who were considered nomads only recently attached to Checa, he also credited higher-ranking kindreds in Checa with invader origins. The difference was that the higher-ranking kindreds had arrived of old and had inserted themselves in the agricultural social structure created by the ancient Yunca founders in the days of Huallallo Caruíncho. A Concha teller gave much the same account of his group in chapter 31.

Apparently the Checa and Concha used the

term "Yauyo" to refer to recent herder migrants, while regarding their own ancestry, which might well have been historically no less Yauyo, as quasi-autochthonous because it had been grafted by ritual and marriage onto the regimen that included "village-owning," valley-oriented agricultural *huacas*. Perhaps they saw no paradox in scorning people of the very sort that Paria Caca favors in his myths—impoverished wanderers from the heights—because they regarded their own ancestors as more powerful "children of Paria Caca." The proof of their superiority was that these ancestors had won dominion over Yuncas and the right to aggregate Yunca *huacas* into their religion while their compatriots still wandered the heights in monoethnic pastoral groups.

As a working hypothesis, one may imagine that Paria Caca's cult as recorded here—that is, in a state of bipolar coordination with Chaupi Ñamca's cult and with Yunca components generally—is the precipitate of, and a commentary on, a long and apparently still continuing series of migrations or incursions from the southerly highland fringes of the manuscript's territory. As in other world areas where pastoralists penetrated the edges and eventually the centers of agricultural societies (e.g., China under Mongol rule), the assimilated descendants of early invaders came to inhabit preexisting social and ritual forms and champion them against later invaders.

The crux of Checa and Concha religion appears to be a systematic priestly synthesis that exalts early invader groups by placing their origin myths, eloquent of a mostly pastoral highland way of life and a kinship-based social ideology (that is, the myths of Paria Caca's "children"), into a dyadic relation with ancient macroregional cults rooted in coastal agropastoral society (those of Chaupi Ñamca, Pacha Camac, etc.). It does so by interpreting the deity who was taken to represent the sum total of invader origins, namely, Paria Caca, as Chaupi Ñamca's brother and wife-giver to Pacha Camac. In this way Paria Caca was imbued like Pacha Camac and Chaupi Ñamca with a power and an identity transcending immediate ethnicity and locality.

The spokesmen of the system, perhaps Yanca priests belonging to Caca Sica *ayllu* or their followers, defined Checa cultural identity as descent from the creators of one local instance of such highland-valley fusion. To be an ancestrally entitled worshiper of *both* Chaupi Ñamca and Paria Caca, and of their local affiliated cults, was the crux of belonging. The term "Yauyo" in Checa and Concha accordingly connoted neither 'foreigner' nor 'com-

patriot' but 'parvenu': immigrants not yet fully inserted into the regional-scale cultic order and its local apparatus.

This view helps us understand a problem of belief, namely, why outsiders like Guaman Poma saw the Paria Caca religion as a Yauyo cult par excellence, while the people of Checa used the word "Yauyo" to label a group barely admitted to Paria Caca's pilgrimage. To characterize the historical connection between Yauyos and Yuncas objectively is much harder. Whether the early highland aggressors whom the tellers identified with the mummified heroes called "children of Paria Caca" were in fact exclusively Yauyo, or whether such groups can be dated and archaeologically linked to Yauyo populations at all, remains unknown. For these reasons in the introduction we shall simply call the mythic protagonists "invaders" except where there is a specific warrant for using the term "Yauyo."

Rostworowski identifies the Yunca or coastal groups at whose expense the children of Paria Caca purportedly expanded as the two large politically unified collectivities (*señoríos*) closest to modern Lima. One, occupying the lower Rímac and Lurín valleys, was called Ychma locally and Pacha Camac in Inca usage; it housed the mighty shrine of Pacha Camac and enjoyed great religious prestige even after Yauyo and Inca depredations reduced its political reach. The other was the domain of the lord called Colli Capac, whose people the Huarochirí narrators called the Colli and whose seat the Spanish called Collique. It was based in the lower Chillón valley (Rostworowski 1988: 60–62). The Checa thought the Colli had founded the highland settlements their own ancestors conquered (chap. 24, sec. 341; chap. 25).

Chapters 11, 12, 17, 24, 25, and 26 contain what appear to be "charter" myths of specific invader groups that identified their founders as "children" of Paria Caca. If they have a unified thrust, it is that Paria Caca's fivefold self, ambiguously developed as a union of brother-*huacas* (chap. 8, secs. 99, 105; chap. 16, sec. 202) or of Paria Caca's human "children" (chap. 9, sec. 113), through many victories created a regional order embracing both victors and vanquished. By a combination of warfare and courtship at superhuman and human levels, Paria Caca turned his relation with the rich aborigines of the valleys, the Yunca, from one of strangeness and enmity into one of coordinated worship, in-law kinship, and interdependency (though certainly not without an abiding tension between groups). The Paria Caca heroes' victories over the Yunca, whom the myths picture as wealthy but im-

moral, fill several chapters. Chapter 31, the charter of the lineages of the Concha (neighbors to the Checa; see especially secs. 388–403) pictures the invaders as trying to assimilate to the aboriginal norms of their in-laws. Paria Caca's complementarity of form and function with the local female (possibly Yunca) *huaca* Chaupi Ñamca suggests that, overall, the mythology of Huarochirí construes a folk memory of conquest as an ideology of affinal interdependence.

How does this happen? The memorable fifth chapter is the *locus classicus* of a theme repeated many times in the manuscript: the poor ragamuffin who, because he is privy to a superhuman secret, carries within him a future power that his rich and splendid contemporaries cannot see. In chapter 5 it is the Baked Potato Gleaner, a byword for poverty, who makes Paria Caca's potential power real by a twofold action: he overturns the extant order's hierarchy (curing but simultaneously humbling a Yunca lord) and at the same time he becomes literally wedded to it (marrying the humbled lord's daughter). Empowered, he introduces Paria Caca's cult to a society transformed by combat and courtship.

The manuscript's ideological image of the invader-aborigine interaction as a passage from hostility to symbiosis may be seen as a one-sided rendering of, rather than a mere fiction about, the politics of coexistence between highlanders and coastal peoples. The dynamic it mythically expresses seems to have been driven by the highlanders' need for cultivable land, which they sought by downward invasion and establishment of "vertical" outliers in the mid-altitudes. Lowlanders in turn sought to capture more water sources by extending their canals upward and exerting political power over the lakes and streams of the heights (Torero 1974: 73–79). The 1558 lawsuit involving the Yauyo of Chaclla and the Yunca of Collique (among others) shows how in prehispanic times the downward penetration of Yauyo "vertical archipelagos" (Murra [1972] 1975a) led to conflicts so mutually costly that Yunca and highlanders reached a *modus vivendi* including cooperation on shared irrigation work and ritual reciprocity between leaders. The Huarochirí text glorifies some roughly comparable *modus vivendi* in mythic idiom. But the lawsuit also shows what the Huarochirí manuscript deemphasizes: that such arrangements were delicate and unstable, liable to lapse into prolonged violence when politically stressed. Even under Inca pacification, the Yauyo of Chaclla, their non-Yauyo Cantarivals, and the Colli Yunca incessantly tried to cheat and coerce each other. When the Spanish in-

vasion unleashed the resulting tensions, the fights and suits that followed did much to drive several polities into helpless poverty (Rostworowski 1988: 83–291).

Chaupi Ñamca and the mythology of gender

Several passages detail the priesthoods, games, sacrifices, *huaca*-impersonating dances, and oracles that ritually organized the interlaced aboriginal-invader societies that the tellers saw as the product of their ancestors' victories. Although the relationships among groups and deities are complex and often far from obvious, one unifying motif is clear: the union between invaders and aborigines is ideologized in terms of a fraternal tie between the highest male deity of the invaders and the highest female deity of the aborigines. The link is taken to warrant marriage alliance between their respective human progenies. In this scheme female deities play an enormous role.

Chaupi Ñamca, supreme among female *huacas*, was a land and river deity of the lower Rímac whose great temple at Mama symbolized her ancient standing as Pacha Camac's wife (Dávila Brizño [1586] 1965: 163). Her name means 'center Ñamca' and she may, like her spouse, have had a following across various valleys; in 1562, Mama was the place chosen for a summit meeting of native lords from the whole region (Murra 1980: xviii). The devotees of Paria Caca have conceptualized her component cults as a fivefold sisterhood, so as to match the form of Paria Caca (chap. 10, sec. 147; chap. 13, secs. 175–183). In the synthesis that dominates the manuscript, Paria Caca and Chaupi Ñamca are made into siblings (chap. 13, sec. 172; Avila [1645] 1918: 64). These claims apparently mirror increased Yauyo penetration of domains in which her marriage to Pacha Camac had once formed a dominant cultic axis. Indeed, in one version the newcomers' claim goes beyond fraternal symmetry to imply superiority: Chaupi Ñamca's five selves are styled "daughters" of Paria Caca, whereas Paria Caca's selves are never said to be her children (chap. 8, sec. 101). The "children of Paria Caca" have also expressed their conviction of political superiority by making their father-*huaca* wife-giver in relation to Pacha Camac.

In establishing a sibling relation between male mountain-*huaca* and female valley-*huaca*, the Paria Caca priests may have followed an earlier prototype. A partially obscured tradition (chap. 8, secs. 106–107; chap. 10, sec. 143) allows us to glimpse Mana Ñamca or Mama Ñamca, a synonym or com-

ponent of Chaupi Ñamca who was once a lowland female counterpart to the male highland *huaca* Huallallo Caruincho (and who, like him, was a fiery power expelled by Paria Caca).

Within the dominant synthesis, ritual order richly embodied the idea of male-female symmetry at the apex of *huaca* genealogy. Paria Caca's priesthoods and his great festival the Auquisna (chap. 9, secs. 117–140) find their explicit counterpart in Chaupi Ñamca's festival the Chaycasna (chap. 9, sec. 122; chap. 10, secs. 149–151), so that the ritual and mythical order opens out in a grand sexual complementarity on the pattern Invader : Paria Caca : Male :: Aborigine : Chaupi Ñamca : Female. The fraternal treatment of the male-female apical deities tends to express ideals of harmony or equilibrium between groups at a totalizing, whole-society level.

However, as one passes from the supreme powers to their *huaca* offspring and their human descendants, the dominant gender metaphor changes from brother-sister fraternity to marriage. A repetitive motif concerns invaders, sons of Paria Caca, who marry Yunca-descended women, implicitly daughters of Chaupi Ñamca (chap. 5; chap. 24, secs. 305–314). Thus the sons of Paria Caca become indebted wife-takers to Yunca groups and their *huacas*.

This conviction of indebtedness parallels what was remembered as invader expropriation of the female and Yunca element in nature, namely, irrigable land. On the ecological plane the relationship between invader and aborigine is likened to the union of wild water from the heights (Yauyo-like, male) with the soil of the valleys (Yunca-like, female). The motif is discussed in the section below on the concept *pacha*. Because this union—irrigation—was in fact the greatest agrarian wealth of the western Andes, many myths can also be read as combined cosmic and political charters for local groups' rights to specific lands and canals. The abundance of landmark detail in the text, which we have tried in notes to key to modern cartography, reflects the function of myth as a memory bank of information about the tellers' generally invasion-based claims on resources.

The conjugal metaphor for invader-aboriginal relations carries a different symbolic load from the fraternal one. Whereas the siblinghood of the apical *huacas* is a static, merely classificatory relation, marriage myths are myths of social dynamics. They express not only an ideal of productive and reproductive union, but also an image of the many tensions involved in creating such union. For example, Collquiri, a water-*huaca* from the heights (chap. 31,

secs. 408–436), must fight with his prospective in-laws and submit to their humiliating discipline before his desire for their beautiful land-*huaca* daughter can turn from destructive lust (flooding) into productive marriage (irrigation). Indeed, all the myths related to marriage treat it as an image of social stress and change latent in union. In chapter 5 Paria Caca's protégé Huatya Curi, a foreign male who wants to marry a human incarnation of Chaupi Namca, garners the hatred of his brother-in-law and establishes himself in his new household only by fighting within it (secs. 49–70). On the political level, accepting a foreign spouse is always a gesture of submission that one accepts at peril to one's autonomy, and for this reason Paria Caca's son Maca Uisa turns down the Inca's honorific gift (chap. 23, sec. 300). Even the Inca himself forfeited his empire by accepting a bride from a secret power that turned out to be the Spanish (chap. 14). While one may read these texts as comments on marriage as such, they also give voice in kinship idiom to fundamental doubts about the political stability of conquest-based agropastoral society.

In sum, the gender mythology of Huarochirí, though centered on an idealized complementarity, is at the same time emphatically a conflict model of society. It envisions every complementarity, whether marital, ritual, ecological, or political, as shadowed by submerged conflicts that had to be repressed in order to institute it. The inseparability of complementarity from conflict is implied to be a motor force in the mutability (what we would call the historicity) of west Andean society.

The Incas as seen from Huarochirí

Chapters 18, 19, 20, 22, and 23 vividly illustrate how the Inca conquest looked to provincial natives and give important clues as to how Incas manipulated the local pantheon. The Inca himself was said to have acknowledged and even subsidized local *huacas*—both those that local people thought of as ancient, like Paria Caca (chap. 18, sec. 220), and those newly emerging, like Llocllay Huancupa (chap. 20, sec. 243). This policy may be related to the fact that the Yauyos were reputed to be generally pro-Inca. Early evidence from the northernmost part of the Huarochirí orbit indicates that the Incas favored Yauyo efforts to penetrate the Yunca and gradually enlarged Yauyo enclaves based at Chaclla to the detriment of the anti-Inca Yunca of Collique and rival non-Yauyo highland groups (Rostworowski 1988: 148, 161, 178). Guaman Poma ([1615] 1980:

1:240–241) drew a picture of the Inca adoring an image of Pacha Camac in the shrine of Paria Caca.

The tellers of the manuscript likewise expressed their alliance with Incas in the idiom of ritual, adoring and helping finance some of the pan-Andean deities that Inca propaganda promoted. Among these figured Pacha Camac, the originally Yunca 'World Maker and World Shaker' whose shrine-citadel lay at the western edge of the mythic landscape (chap. 22, secs. 276–284; Patterson 1984[?]). So thoroughly had the Incas intercalated regional and local cults with royal religion that the Huarochirí people thought the Incas themselves owed some of their victories to help from Paria Caca's offspring (chap. 19, secs. 228–229; chap. 23).

The tendency to equate Cuni Raya, a coastal Trickster-demiurge embodying the transformation of landforms by water, with the invisible Vira Cocha fostered by Inca cult may also have been heightened by interaction with Incas. But for the Huarochirí narrators, this *huaca* stood over and against Inca power as against all other human power. Chapter 14 recounts an enigmatic Cuni Raya Vira Cocha myth alluding to the fall of the Incas. It apparently refers to the fact that the Incas had divided their domains in dynastic struggle just before the Spaniards arrived. The narrator tells how Cuni Raya Vira Cocha inveigled the Inca king with a beautiful bride and then, inducing him to "draw a line across the world" (chap. 14, sec. 196), made him fatally retreat from his sacred center at Cuzco. During the resultant outbreak of chaos, "people scrambled for political power, each saying to the others, 'Me first!' 'Me first!'" (chap. 14, sec. 197). While they wrangled uselessly in civil warfare the Spanish appeared at Cajamarca.

The Spanish invasion as seen from Huarochirí

Even more remarkable are the unique chapters that give us a glimpse of how natives, after a lifetime of colonial afflictions, looked back on the first confused moments of their contact with the Spanish. The first inkling of the epochal events arrives in the same way that the prophecy of Paria Caca's imminent victory had arrived long before (chap. 5), as a secret that Paria Caca vouchsafed to a despised ragamuffin from the heights. This time the prophet of the coming crisis is the "Mountain Man" Llacuas Quita Pariasca (chap. 18). The same chapter tells how one *huaca* priest survived the Spaniards' attempt to burn him alive and became a leader in preserving and sheltering the *huacas* amid Spanish at-

tacks. Many references (e.g., chap. 9, secs. 122, 125, 136, 137; chap. 10, secs. 144, 148, 149; chap. 13, sec. 175; supp. I, secs. 449, 469, 473) show that those who rescued the *huacas* succeeded in hiding their cults (sometimes, a censorious voice warns, by camouflaging them in Catholic ritual) far into the colonial era. At least one of the contributors to the text regularly obliges Father Avila by warning that many Indians' conversion was a façade (chap. 9, secs. 133–134). Other chapters (20–21) reveal that even Father Avila's most obsequious ally, Don Cristóbal Choque Casa, in a certain sense still believed in—was even dominated by—the “evil ancient demons.” These chapters tell with astonishing vividness and intimacy of Cristóbal's visionary combat with the *huaca* Llocllay Huancupa and of how Llocllay returned to battle Cristóbal once more in a dream. Cristóbal's dilemma—the need to validate his Christianity by conquering *huacas*, combined with inability to conquer them convincingly without invoking the same mythic paradigm he proposed to replace—adds up to a uniquely moving image of the Andean convert's stressful and compromised position.

Specialized chapters

The manuscript contains some specialized chapters perhaps given in reply to questions about arts that Tridentine Catholicism forbade as diabolically inspired, heretical, or superstitious. Chapter 29, short but important, sketches Andean astronomy or astrology. It suggests that the tellers thought of certain “black” constellations and certain star clusters as the celestial prototypes of the earthly beings they resembled. Visionaries saw these constellations “descend” to earth and shower their protégés with specific vital force.

Chapters 27 and 28 treat the cult of the dead. Chapter 27, a droll explanation of why the dead no longer come back, echoes a motif from chapter 1, namely, that humans must accept irremediable death as the alternative to Malthusian disaster. Chapter 28 recounts funeral and commemorative custom, somewhat evasively in the crucial matter of how ancestors' bodies were treated. Perhaps the tellers hoped to avoid setting persecutors on the trail of their beloved and (ideally) everlasting ancestral mummies.

Two “supplements” (which may be rough drafts) lay down the ritual duties of couples who give birth to magical children—twins or babies with small birth defects. These unusually difficult sections af-

ford an idea of the complex ritual obligations embedded in in-law ties, with emphasis on the ritual exchange of immense amounts of coca and other wealth.

The Huarochirí region's people and their historic situation

These myths relate intimately to the real-life landscape and the historic conjuncture that generated them. For one thing, the deities themselves are land features and local climatic forces. For another, these priesthoods and celebrations themselves organized productive work, so that the religious regimen encodes practical as well as ideological information. Finally, every facet of religious organization—spatial, calendric, and hierarchical—reflects the pressure of colonial circumstance.

The westernmost range of the high Andes runs northwest-southeast, parallel to Peru's Pacific shore. The long slope from its icy crests down to the desert beaches forms a rugged watershed cut at intervals by many small rivers carrying meltoff from the heights to the ocean. The scene of the Huarochirí mythology is a segment of that slope. Most of the places mentioned in it are close to three valleys: the Rímac River valley, on whose lower banks the Spanish built Lima, but whose upper tributaries, the Chaclla and Mama rivers of the manuscript, were still mostly native territory in 1600; to the south, the Pachacámac River valley, today called the Lurín, on whose headwaters stood the colonial parish of San Damián; and still farther south the “River of Huarochirí,” today the Mala, which gave its name to a colonial parish as well as to the province and to the manuscript. The people who made the manuscript also seem to have included in their range of meaningful geography one valley to the north of Lima, the Chillón, and two more to the south of Huarochirí, the valleys of the Omas and Lunaguaná (today Cañete) rivers.

Karen Spalding's *Huarochirí: An Andean Society under Inca and Spanish Rule* (1984) meticulously reconstructs the colonial society from which the manuscript emerged. Spalding (1984: 3) cautions us that colonial Huarochirí Province was no huddle of hamlets but a region the size of Massachusetts. Yet neither is the landscape whose meanings the myths unfold too huge for Andean travelers to have absorbed from personal experience. Taylor's map (1987b: 39) suggests that the widest span of the mythic landscape reaches about 85 air km (53

miles) from ocean to mountaintops, and about 120 air km (74.5 miles) from north to south. A separate reckoning by John Treacy (1984) estimates the main mythic scene as about 108 air km (67 miles) east to west and about 56 air km (35 miles) north to south. Of course, estimates using air kilometers hardly simulate the twisting paths pedestrians and llamas actually followed across the contorted mountain landscape. Even on foot, highland travel involves innumerable hairpin turns up and down the faces of river chasms. Yet, even allowing for steep climbs and zigzags, these distances would hardly have discouraged Andean travelers. Averaging Cotler's (1958: 113–114) and Spalding's (1984: 31) statements on walking speed over the Huarochiri terrain yields 2.4 km/hour as a usual rate for the area. If so, a person walking eight hours a day might have descended from the high shrines of Paria Caca to the Pacific shores in about four days. These are only order-of-magnitude estimates, but they suffice to remind us that the world pictured in the Huarochiri text is mostly a world of experienced rather than imagined landmarks and spatial relations.

Ecologically, the mythic scene spans a remarkable spectrum of "vertical tiers" (Murra [1972] 1975a; ONERN 1976). The uppermost points mentioned are icy peaks more than 5,000 m above sea level. The myths clearly take as their backdrops the "pluvial tundra" of Mullucocha (5,000–4,300 m above sea level) where Paria Caca annihilated a mountain. The heroes' downward course traversed the "very humid páramo" (4,500–3,900 m above sea level; *páramo* means high grassland) and the "humid woodland" (3,800–2,300 m above sea level). This is all high, seasonally rainy and snowy country with numerous lakes and probably included the llama-herding lands of the ancient peoples up to 4,600 m above sea level. The tellers of many myths identified with the splendor of the heights and with their product, camelid wealth on the hoof. One of the major ceremonies was a llama race to the sacred heights, with the first llama acclaimed and given a sacred name (chap. 9, secs. 120–122, 128).

Agriculture belonged to lower tiers, four cultivation zones compressed within narrow valleys: the "montane steppe" at San Damián, and three increasingly lower, dryer grades of "desert scrub" (*matorral desértico*). The colonial resettlement villages in which the manuscript seems to have been made stood in the upper part of this range, 3,000 to 3,500 m above sea level. The agricultural terraces immediately around them were and are irrigated, but on the "montane steppe" above them dry farming of high-altitude crops is also possible. There

people cultivated tubers, especially potatoes, and the Andean grain *Chenopodium quinoa*, which one tradition mentions as a mythic plant that gave birth to people (chap. 24, sec. 302).

Irrigable crops grew best in places where canal water fertilized pockets of sun-warmed soil amid the rocky river canyons. Irrigated valley lands symbolized abundance, and access to warm land with water was seen as the limiting factor in winning wealth. The tellers of the myths especially associated maize with irrigation, for example, in the poignant figure of the young woman who stood in her field and cried as she watched her insufficiently watered maize shrivel up (chap. 6, sec. 83). Chapters 30 and 31 are vivid mythic renderings of the struggle between water-poor and water-rich groups.

Still further down-valley but short of the coastal plain, at altitudes around 1,000 m above sea level, irrigation takes place in small patches of warm river-bank land commonly called *chaupi yunca* ('mid-yunca' or 'semi-yunca'). These sheltered, garden-like river margins were coca lands in antiquity, prized for the abundance of the sacred leaf that Huarochiri natives ceremonially lavished on each other and on their superhuman patrons. The manuscript is especially detailed in explaining how coca cultivators fit into Paria Caca's cult regimen (e.g., chap. 8, sec. 109).

Where the fertile valleys meet the sea, a rich fishing industry combined with delta and riverbank agriculture to yield wealth that awed even the Incas. Prehispanic seaboard dwellers developed pisciculture intensively (Espinoza Soriano 1974). Although the myth-tellers thought of themselves as highland-descended, they, too, imagined salt water as part of the humanized and culturalized landscape. Fish-farming was so familiar that the teller of chapter 2 thought of ocean fish as runaways turned wild:

At that time there wasn't a single fish in the ocean. Only Urpay Huachac used to breed them, at her home, in a small pond.

It was these fish, all of them, that Cuni Raya angrily scattered into the ocean . . . (chap. 2, sec. 26)

At the time when the manuscript was written, much of the prehispanic technology and some of the prehispanic land tenures that once governed use of these productive zones still functioned. But the Yunca, Yauyo, and Inca claims were no longer the only factors. The social organization of land—administrative divisions of territory, settlement patterns, and legal land rights—had become an even more complex, multilayered scheme com-

posed of native and colonial elements. Diego Dávila Brizeño's ([1586] 1965) report on the "Province of the Yauyos" and Karen Spalding's monograph (1984) afford valuable clues to the *de facto* world the myth-tellers inhabited.

The most modern part of the settlement pattern was the one Dávila Brizeño himself had helped impose—concentration into forced resettlement villages (*reducciones*). Each village gathered together numerous non-nucleated settlements scattered up and down the valleys to make a conveniently taxable package on the model of a planned Spanish village (see the section on the concept *llacta* below). These parishes inorganically merged fragments of various units earlier defined by the Inca and aboriginal political orders. One of the things that makes the Huarochirí manuscript hard to read is the fact that the tellers are constantly comparing the (to them) arbitrary *reducción* map against the (to them) intelligible distribution of groups and deities that their hidden ritual still commemorated. Thus their toponymy refers to both ancient and current mental maps.

Nonetheless, the Spanish administrative plan did still make use of some older orderings. A map made by Dávila Brizeño representing Spanish administrative geography of the 1580s in the context of native toponymy (Rostworowski 1988: unpaginated insert) shows the Yauyos Province bisected by what appears to be an Inca-style moiety dividing line: the southern half is called Anan ('upper') Yauyos and the northern Lorin ('lower') Yauyos. This feature the Spanish apparently retained or at least recognized. Colonial Huarochirí Province corresponded to Lorin Yauyos. And when it came to sharing out the right to rule and tax Andean people, the Spanish availed themselves of other Inca demographic and organizational schemes. The Spanish *repartimiento*, or political apportionment of tributary subjects, proceeded by assigning each established native lord to a Spanish *encomendero*. The patterning of colonial lordship thus legalized appears to echo Inca rules albeit with innovations and distortions. So the initial colonial system, while it functionally overturned many native norms, retained the gross anatomy of Inca political divisions, and some of these are detectable in the Huarochirí manuscript even after subsequent reorganizations.

The Incas saw each half of the region as composed of large blocs of people (perhaps ethnically defined), each comprised of several *huarangas* or 'thousands' of tributary households. In what Dávila Brizeño called Lorin Yauyos, which housed the ancestors of the manuscript's authors, the Incas

recognized and the Spanish retained three major groupings:

LURIN YAUYOS

Huarochirí People

Huaranga Colcaruna
Huaranga Quinti
Huaranga Langasica
Huaranga Chaucarima
Huaranga Checa

Chaclla People

Huaranga Chaclla
Huaranga Carampoma
Huaranga Casta

Mamaq People

Huaranga Matucana
Huaranga Huanchor

ANAN YAUYOS

(Spalding 1984: 54)

Each "thousand" had a native lord, or *curaca*. An overlord or *curaca principal* was recognized by the Spanish, on purported Inca or aboriginal precedent, as lord of all *huarangas* in the bloc. This was the highest office held by a non-Inca lord. By such a title the Ninavilca lords of Huarochirí (chap. 7, sec. 93; chap. 19, sec. 230) were recognized as having precedence among, if not power over, the *huarangas* most prominent in the manuscript.

Finally, within these Inca-influenced political arrangements there remained elements of a still older order. The pre-Inca (or non-Inca) settlements that the informants called their *llactas*, some already reduced to ghost towns, were still the points of mythic reference. At the microscopic level, a system of partly localized extended kinship reckoning, discussed below, remained the matrix for relations within and among households. To what degree the large, purportedly hereditary categories that dominated the overall scheme of the myths corresponded to any territorial reality or to any practical pattern of residence by 1600 is uncertain. But it is likely that the large, purportedly genealogical formations whose founders are the greatest heroes of the text, and the *ayllu* or ancestor-focused kindreds, still counted, at least theoretically, as the corporate holders of important rights in productive assets (see below, especially on the concepts *yumay* and *ayllu*).

In the later sixteenth century the Huarochirí people were not numbered among the poor. They were heavily taxed, and Spaniards vied for chances to exploit them. Far from being an obscure hinter-

land, their region lay astride the best-known route from the Spanish capital, Lima, to the Inca one, Cuzco. But their relative wealth did not protect them, and in some respects the inhabitants of Huarochirí were an afflicted people. Epidemics of the 1550s, 1580s, and 1590s, within the living memory of myth-tellers, had mowed down a huge share of a population with weak immunological defenses. "If we accept Dávila Brizeño's estimate of approximately 6,000 household heads in Huarochirí in the 1540s, shortly after the entry of the Europeans, then the province lost . . . almost 30 percent of its adult male population in the quarter century between 1545 and 1571" (Spalding 1984: 173). The rest of the century was a period of continuing severe population decline in Huarochirí as in many Andean regions (Spalding 1984: 176). Around 1560 and again in the 1580s, survivors of the epidemics in some parts of the Andes (including southerly Yauyos) had asked the *huacas* to defend them, but suffered bitter disappointment in the failure of nativist movements (Taki Onqoy, Moro Onqoy, and others; Curatola 1978; Stern 1982: 51–71). When Jesuit fathers conducted a conversion campaign in Huarochirí in 1577, they reported finding many people sick in their fields (Arguedas and Duviols 1966: 244). Missionaries routinely procured conversions by exploiting the desperation of the mortally ill.

Some of the myth-tellers were probably old enough to remember other calamities. When Spanish forces crushed the forty-year-old neo-Inca redoubt in Vilcabamba and then in 1572 executed the last independent sovereign of Inca blood, Túpac Amaru, Andean people everywhere went into mourning. The administrative overhaul that followed increasingly reduced native chiefs to the compromised status of tribute enforcers and cultural brokers. Some of the myth-tellers may have been among those routed from their homes and chased into strategic hamlets by Spanish functionaries in the 1580s. The "people called Indians" also had to comply with increasingly exhausting tribute regimens. Meanwhile, the authorities allowed Spaniards to appropriate landholdings that the natives lacked enough population to defend and sometimes let clerics exploit parishioners outrageously.

So by the probable date of the manuscript—1608—the inhabitants of the Huarochirí region had reason to wonder, like Quita Pariasca the Mountain Man (chap. 18, sec. 221), whether the world itself had turned bad. Several passages in the manuscript are colored by anxiety about sickness and depopulation (chap. 19, sec. 233; chap. 25, sec. 345; chap. 26,

sec. 357). Observing that the natives of the rocky heights seemed to be holding their own even as the aborigines of the coast were perishing (and indeed became entirely extinct, through both depopulation and assimilation), the tellers of chapter 9 (sec. 140) wondered whether perhaps the rustic highlanders did not owe their vitality to greater faithfulness to the Andean religious tradition.

Into the world of the *huacas*

Some of the basic terms in Huarochirí myths embody unfamiliar Andean assumptions or categories. While glosses cannot capture their full senses, a reader at least needs some idea of what is lost in translation. The following paragraphs comment minimally on the most important ones.

Pacha: 'earth, world, time, place'

Huarochirí people called the world and time together *pacha*, an untranslatable word that simultaneously denotes a moment or interval in time and a locus or extension in space—and does so, moreover, at any scale. In chapter 18 (sec. 221) the Mountain Man, foreseeing the arrival of those destroyers who would turn out to be the Spanish, says, "Alas, brothers, the *pacha* is not good." He could have meant anything from 'this is not a good situation' (or 'moment' or 'conjuncture') to an idea as grand as 'the world is no longer good' or 'the epoch is no longer good'. The same word *pacha* is also the name of earth in general and in modern folk religion means Earth as a personified female being.

Cosmological ideas are not spelled out in the Huarochirí manuscript. Despite the use of solar gnomons for calendric astronomy (chap. 9, sec. 108), the Sun appears as a person in Checa lore only tangentially (chap. 4; chap. 13, secs. 172, 188). Sun worship figures as an Inca idea (chap. 22, secs. 276, 279) and as a motif in the genealogy of the *huacas* as the people of the lower Rímac valley imagined it (chap. 13, sec. 172). The moon is not personified anywhere. The Andean cosmos can be partly understood from these myths, but not because the myths explicitly describe it. We deduce what we can by noticing what the tellers take for granted. To some degree the picture can be augmented with data from other written sources and from recent ethnographic research that offers conceptual analogies. (Earls and Silverblatt 1978 propose a synthetic model.)

Two pervading generalities seem to order the

data. One is that earth has predominantly female associations and water predominantly male. The second, partially overriding the first, is that altitude and motion connote maleness, while depth and stability are associated with femaleness.

Earth's living mass was imagined rising up from the waters of the surrounding ocean. (Whether the waters circled earth like Saturn's rings or whether earth's base was immersed like a boat's hull is not clear.) Especially in local instances, particularly when visualized as the green irrigable valley lands, earth is usually female. But the land's highest points, the great peaks whose ice-crusting crowns overtower the habitable earth, are usually male. One of them is Paria Caca. Roughly, the solid part of the world might be imagined as a single world mountain made of all the Andean ranges, rising from femalelike valleys to malelike snowcapped heights.

Water—rainstorms and mudslides, snow and glacial runoff, tiny irrigation canals and mighty rivers, even that astral river we call the Milky Way—is the kinetic part of the world. Water moves over *pacha* in a circular path. It rides up from the ocean into the sky along the Milky Way "river." Chapter 29 (sec. 375) tells us that water rises because a celestial llama constellation carries water up from below by drinking before ascending. Then water washes down onto the heights of the earth as storm and rain, bathing and fecundating earth as it descends to the ocean. People worshiped the great snowcapped peaks "because that is where their water comes from" [Avila [1645] 1918: 83]. Water is often male, especially storm water and downward-flowing water. Several myths liken the chasm-cutting power of rivers in spate, or the storm and flash flood that create disastrous mudslides, to warlike male violence:

As soon as they brought him up a hill, Maca Uisa, child of Paria Caca, began to rain upon them, gently at first.

The natives of that country said, "What could this mean?" and began to ready themselves.

When they did so, Maca Uisa reduced all those villages to eroded chasms by flashing lightning and pouring down more rain, and washing them away in a mudslide. (chap. 23, secs. 295–296)

Although the Pacific Ocean plays a key part in organizing mythic space, it is not personalized in the manuscript. In modern Andean myth, the ocean (*Mama Cocha* 'mother lake') is usually female. The *huaca* most closely associated with the sea is Pacha Camac (chap. 22, secs. 276–284), but this great force is not clearly defined as a maritime deity.

The hydraulic embrace of moving water and enduring earth was imagined as sex. Their embrace yielded a biotic system (Dumézil and Duviols 1974–1976) in which life forms emerge from mixed earth and water. Hydraulic sex was sometimes imagined as a turbulent affair. The myth-tellers, who seem to have faced the harrowing vicissitudes of a water-poor irrigation economy with a good deal of humor, likened its hazards to the comical chaos of undisciplined desire. In four myths (chap. 6, secs. 82–90; chap. 12, sec. 170; chap. 30; and chap. 31, secs. 406–432) voluptuous earth-women offer their parched bodies to the virile water-*huacas* who rush down from the heights. The earth-women's self-serving tricks and the water-men's lecherous ineptitude can turn their meetings into comic disasters. In chapter 31, when the lake-*huaca* Collquiri rushes downhill to his earth-lover Capiyama, the bursting pressure of his virility squirts out of every channel and sprays destructive floods all over Capiyama's people:

... Capiyama's elders shouted at Collquiri from their <crossed out> [spring] village:

"Son-in-law, everybody's mad at us! Don't send us so much water!"

"Shut it off!"

"Hey, Collquiri! Hold back on the water!" they yelled.

With them shouting like that, Collquiri plugged the hole with a blanket and other stuff.

But the more he plugged it the more the barrier crumbled and the more the water kept bursting through over and over again.

Meanwhile the people from down below kept yelling at him nonstop:

"PLUG IT UP!!" (chap. 31, secs. 425–426)

Pacha, the world as a given arrangement of time, space, and matter, is not supratemporal. It clearly admits change, even cataclysm. There have been times when *pacha* "wanted to come to an end," and the manuscript tells us how this can happen. Water might fail to ascend into the astral "river" and the world might drown as the ocean rose (chap. 3; chap. 29, sec. 375). Or Pacha Camac Pacha Cuyuchic, the 'World Maker and World Shaker' who sleeps under the ruined shrine that still bears his name, might turn over in his dreams and pulverize the world in an earthquake (chap. 22, sec. 284); the region is in fact subject to devastating earthquakes. Everything, including humanity, has been crushed and refashioned. The social order, too, is constructed and transformed in superhuman violence; the tellers imagine the original theophany that was their group birth as one of many cataclysms that simultaneously gave form to the land and to society.

In gross terms, then, the Huarochirí world opposes the qualities of still centrality—depth, solidity, dryness, stability, potential fecundity, womanliness—to those of a restlessly moving outer orbit—height, fluidity, wetness, movement, potential for insemination, virility. As the outer waters wash over the inner earth, these two fundamental lives mix in the circulation of water over soil. Lives that are both watery and earthy emerge: plants, animals, people. Born fat, wet, and juicy, all beings eventually—in the space of a dry season or a long life—separate out again into their original substances (Allen 1982). Moisture departs as vapor, leaving a weatherbeaten husk and the dry seeds of a future cycle. Nature and ritual combine to return the parts to their sources so the cycle can start anew. Humans like all others emerge fat and wet, but at the end of life their dried husk containing the potential for future life goes as a mummified ancestor (*mallqui*) back to earth. In chapters 27 and 28, a dry, seedlike being that emerges from the dead human husk—a fly—is the living residue of a dead generation. The function of ritual and sacrifice is to ensure a steady circulation of biological energy through *pacha* by conducting social exchange among its living parts.

Camay: a concept of specific essence and force, 'to charge with being, to infuse with species power'

The act by which *huacas* bring other entities into being is not expressed with the plain word meaning 'to make' (*ruray*), nor with the verb *huallpay*, which González Holguín took to mean a divine act of creation ([1608] 1952: 174), but with a different verb: *camay*. *Camay* escapes the seemingly handy glosses 'to create' (because 'create' connotes an *ex nihilo* act, while *camay* connotes the energizing of extant matter) and 'to fashion' (because 'fashion' suggests only an initial shaping of inert matter, whereas *camay* is a continuous act that works upon a being as long as it exists). But what does *camay* mean? The astronomical or astrological chapter 29 gives a crucial clue: it labels a llama-shaped constellation the *camac* (agentive form, '*camay*-er') of llamas. On descending to earth this constellation infuses a powerful generative essence of llama vitality, which causes earthly llamas to flourish. All things have their vitalizing prototypes or *camac*, including human groups; the *camac* of a human group is usually its *huaca* of origin. Religious practice supplicates the *camac* ever to vitalize its *camasca*, that is, its tangible instance or manifestation. Taylor (1974–1976) has likened this idea to Platonic idealism, an insight that helps one understand the profoundly

plural and ongoing nature of Andean creation but also minimizes its earthiness. *Camac* in the manuscript seems to suggest a being abounding in energy as physical as electricity or body warmth, not an abstraction or mental archetype.

Huacas could be *camac* to great or small categories of beings. The great coastal deity Pacha Camac bears in his very name—'*Camac* of space and time'—an all-embracing function as the vitalizer of worldwide realities, while local *huacas* animate smaller entities. Likewise, ordinary beings could be *camasca* (participial form, 'infused with *camay*') to different degrees. An *ancha camasca* person is a 'very powerful' one. But one can clearly see that *camay* means specific form and force, not general potency. In chapter 14 (sec. 191) three men boast of their speed, saying:

"I am a condor shaman!" some men answered.

"I am a falcon shaman!" said others.

"I am one who flies in the form of a swift!" replied still others.

What they said more literally is:

"I am the *camasca* of the condor!"

"I am the *camasca* of the falcon!"

"I am one who flies as a swift!"

The point appears to be that these men are three shamans whose patrons, the archetypes of birds who symbolize speed, have infused in them the species powers of speed and range of the condor, the falcon, and the swift.

Huaca: 'superhuman person, shrine, holy and powerful object'; huaca priesthood

The Huarochirí manuscript is in large measure a reading-out of its space. The horizon, not the cosmos—geography, not metaphysics—poses the questions to which its most vibrant deities give answers. Andean numina lodge in places or placed objects: mountains, springs, lakes, rock outcrops, ancient ruins, caves, and any number of humanly made objects in shrines: effigies, mummies, oracles, and so forth.

Like all the other persons English forces us to call "deities," Paria Caca is a *huaca*. The half-Andean historian Garcilaso Inca de la Vega tried in 1609 to convey the sense of this all-important term by telling us that:

huaca . . . means "a sacred thing," such as . . . idols, rocks, great stones or trees which the enemy [i.e., Satan] entered to make the people believe he was a god.

They also give the name *huaca* to things they have offered to the Sun, such as figures of men, birds, and animals. . . . *Huaca* is applied to any temple, large or small, to the sepulchers set up in the fields, and to the corners in their houses where the Devil spoke to their priests. . . . The same name is given to all those things which for their beauty or excellence stand above other things of the same kind, such as a rose, an apple, or a pippin, or any other fruit that is better or more beautiful than the rest. . . . On the other hand they give the name *huaca* to ugly and monstrous things . . . the great serpents of the Antis . . . everything that is out of the usual course of nature, as a woman who gives birth to twins . . . double-yolked eggs are *huaca* . . .

They use the word *huaca* of the great range of the Sierra Nevada. . . . The same name is given to very high hills that stand above the rest as high towers stand above ordinary houses, and to steep mountain slopes . . . (Garcilaso Inca de la Vega [1609] 1966: 1:76–77; Livermore's translation)

A *huaca* was any material thing that manifested the superhuman: a mountain peak, a spring, a union of streams, a rock outcrop, an ancient ruin, a twinned cob of maize, a tree split by lightning. Even people could be *huacas*. Modern ethnography tells us that one extraordinary ethnic group, the Uru of Bolivia, was collectively called *haqe huaca* 'a human *huaca*' by Aymara-speaking neighbors because the Aymara thought the Uru had survived from primordial times (Manelis de Klein 1973: 143). In the manuscript, too, people can become *huacas*. Mummified ancestors of high rank (see below) could be *huaca*. The Inca rite of Capac Hucha (chap. 22, sec. 280) turned live humans—spotless children and youths—into new *huacas* by burying them alive. The discovery of new *huacas* never ceased. Avila recalled that when one native brought home a black silk button with gold thread, which he had found in a garbage heap in Lima, a "master" of *huaca* worship revealed to him that it should be enshrined as a household *huaca* ([1645] 1918: 74). Chapter 20 details the discovery and career of another new-found *huaca*.

People owed *huacas* reverence and also plenty of goods: llama and guinea pig meat, brilliantly colored mineral powders, thorny oyster shell, clothing, coca leaf, maize dumplings, and maize beer. The Huarochirí manuscript lays down the priestly regimen for sacrifice and gives examples of the responses priests delivered on *huacas*' behalf:

They [*huaca* priests] gave people advice, telling them all sorts of things:

"You are to bathe in the confluence of two streams."

"You must sacrifice one of your llamas."
People were more than happy to obey their dicta.
(chap. 13, sec. 186)

The Huarochirí manuscript tells a good deal about priesthoods, but not much about rules regulating lay worshipers' individual or group affiliation to *huacas*. People appear to have belonged to the cults of *huacas* considered as apical ancestors of their patrilineages, of their *ayllus*, and of the clanlike large groups identified with major founder-*huacas*. Apparently, heredity was a primary determinant of local religious duty, because when people went on their own initiative to consult the *huaca* oracle of the five Ñamca sisters, the Ñamcas would ask if the petitioners had properly consulted their hereditary *huacas* beforehand:

. . . these *huacas* would ask those who went to them, "Have you come on the advice of your own Con Churi [hereditary household deity], your father, or your elders?"

To those who answered "No," the *huacas* would reply, "Go back, return, consult your Con Churi first." (chap. 13, sec. 185)

Huaca shrines were powerful social and political corporations. When a *huaca* gained legitimacy, we learn from the "biography" of the *huaca* Llocllay Huancupa (chap. 20), worshipers built it a temple precinct and offered costly service. Politically sponsored *huacas* had endowments of both herds and fields that common people were required to serve:

The Incas worshiped these two *huacas* [the Sun and Pacha Camac] most, beyond all the others, exalting them supremely and adorning them with their silver and gold, putting many hundreds of retainers at their service, and placing llama herds for their endowments in all the villages.

The llamas of Pacha Camac sent from the Checa people stayed at Sucya Villca. (chap. 22, sec. 277)

Huacas also had human servitors and even spouses. Avila in 1645 reminisced about having met a good-looking eighteen-year-old girl, crippled and walking on two staves, who had "been dedicated as a woman of an idol" (the *huaca* Maca Uisa). Maca Uisa lived with her in the form of a sacred blue stone, "no bigger than the palm of a hand," which she kept in a basket with tiny but luxurious garments to dress it ([1645] 1918: 69–70). He also mentions that a "*saçerdotisa* [priestess] very celebrated among the Indians" was known as a "woman of Pariacaca's" ([1645] 1918: 65). Both examples use the Spanish term *muger*, meaning 'woman' literally

and 'concubine' or 'secondary wife' more freely, rather than the legal Spanish term for 'wife'. Because the Spanish terminology of marriage implies a sacrament, Father Avila might have scrupled to use it in connection with *huaca* marriage no matter how natives regarded the matter; so we cannot tell whether these unions counted as full marriages in the native system.

Some *huaca* priests clearly enjoyed class privileges. For example, common people did all the agricultural work on fields belonging to the *yanca* priests who had hereditary authority over a lake and its irrigation water (chap. 31, sec. 435) and they gave priests huge amounts of meat (chap. 24, sec. 335). Water priests are credited in the manuscript with almost dictatorial power over some of the processes by which society reproduced itself, including vital decisions about people's rights and duties in basic subsistence agriculture:

Because he was the *yanca* for this purpose, all the arrangements of the season were made in compliance with his commands.

When it came to irrigation he'd be the only one to give orders about it, saying, "It'll take place now" or "It'll be so many days." And all the Concha obeyed him to the last word. (chap. 31, sec. 434)

Early in his extirpation campaign, Father Avila imprisoned an important priest of Chaupi Ñamca in Mama village named Hernando Paucar (who may be a source of the distinctive subregional mythology contained in chapter 13) and wrung from him a confession about the privileged life of *huaca* priests. It should be read with caution, since it comes to us via a paraphrase composed four decades after the event:

... it is true that I've been a priest [*sacerdote*] of Chaupiñamocc since I was a youngster, and I inherited [the priesthood] from my father, and in all these villages of this parish and others, they've respected me a great deal, and I used to come visit them twice every year, and if I was late they used to send someone to call on me, and they would send me horses, and people to serve me on the road, and whenever I entered a village they would erect arches, and they would come out dancing, with the women beating their drums, and they would give me lodging, and fed me, and served me, and they gave me so much that I didn't know what to do with it all. At my rear they made something like a cabin of boughs, and they would cover it and close it off with cloaks, and the floor used to be covered with fresh straw, and I would enter into it alone, by day or by night as I preferred. There they

would come to consult me, and I responded, and sacrificed guinea pigs, pouring out maize beer, and I used to perform other ceremonies in view of those who attended, and some used to say that they wanted to hear a response given by Chaupiñamocc, and I used to make her speak by placing there a little idol that represented her, and sometimes I would talk in a very high voice and other times very low. . . . And for this everyone respected me, as much as they do you [Father Avila], and much more. On the third or fourth day they would bring together maize, potatoes, and a lot of food for me, and they would dispatch it to my wife in my village. In this village I'd be lodged in one fellow's house the first time, a different fellow's the next . . . (Avila [1645] 1918: 68–69)

Through oracles and through their privileges in ratifying rites of passage, the *huacas'* priestly representatives closely governed the ongoing business of society. Another sort of priesthood, the nonhereditary *huacsa* office, rotated among members of appropriate kin groups. *Yancas* seem to function as calendric and technical authorities, oracles and mediators, while the *huacsas'* main duty was to impersonate the great *huacas* in festivals and reenact their myths. Some of the narratives may be verbal "scripts" of *huacsa* performances.

In comparison to the priesthoods, the manuscript has little to say about the power of nonpriestly leaders such as the political "native lords" called *curacas* or the native magistrates (*alcaldes*) appointed by Spanish colonial officials. It mentions several postconquest *curacas* by name, often commenting on their attitudes toward *huacas* or as a device for setting a chronological context. Several passages imply that the *curaca* was expected to take a prominent part in *huaca* ceremonies (chap. 13, secs. 173–174, 176), and that he could exert leadership over a community's decision to adopt or neglect particular *huacas* (chap. 19, sec. 231; chap. 20, secs. 244–245).

Huacas had vibrantly individual personalities. Paria Caca, whether in his incarnation as the hailstorm of the icy heights or as the five-in-one hero who beat the Yunca down toward the sea, seems haughty, brilliant, and cold, a driving deity. Llocllay Huancupa (chaps. 20 and 21) lurks in the dark like an inarticulate beast, roaring dully over his immolated meal. Chuqui Suso, the sexy agricultural *huaca* (chap. 6, secs. 82, 88–90), and her sister who seduced the Paria Cacas into irrigating her (chap. 12, sec. 170), as well as the great maternal *huaca* Chaupi Ñamca, were associated with sensuality and playful ease:

"Chaupi Ñamca enjoys it no end when she sees our <crossed out:> [cocks] private parts!" they said as they danced naked.

After they danced this dance a very fertile season would follow. (chap. 10, sec. 151)

They used to stay there all night long, staying awake till dawn, drinking and getting drunk. They got real happy performing the dance called Aylliua, and danced that night drinking and getting drunk until dawn.

After that they went out to the fields and simply did nothing at all. They just got drunk, drinking and boozing away and saying, "It's our mother's festival!" (chap. 13, sec. 174)

Clearly *huacas* are living beings, persons in fact. Avila and other Christian seventeenth-century observers seem to think of the *huacas* as real beings, material in form but animated by demonic spirit. When Avila applied the terms "god" and "goddess" to *huacas* (for example, Cuni Raya's beloved Caui Llaca; Arguedas and Duviols 1966: 202–203), he seemed to be thinking of them as linked to natural forms, anthropomorphic and tangible, something like the deities of Greco-Roman mythology and the "demons" of medieval Europe whose lore he apparently knew in some detail (Arguedas and Duviols 1966: 207, note 3). In this partly Greco-Roman sense, the word "deity" might fit the *huacas*. But one must be careful; the dualism of substance enfolded in the Christian usage of the words "god" and "divine" seems superfluous for understanding Andean worship. The world imagined by the Checa does not seem to have been made of two kinds of stuff—matter and spirit—like that of Christians; *huacas* are made of energized matter, like everything else, and they act within nature, not over and outside it as Western supernaturals do.

The tellers give *pacha* shape by mapping onto it a society of *huacas* that mimics idealized human social structure, mainly genealogical and affinal. Earth forms, superhumanity, and society match each other in a structure of correspondences. Great snowcaps are great creators. Their myths are often shared among large populations (perhaps tens or hundreds of thousands before the Spanish conquest) united by language and other markers of public identity; often they are the groups called "nations" by some Spanish authors and "ethnic groups" by modern students of Inca polity. Paria Caca, whose body was a double-peaked snowcap high in the rugged western range, was known to Guaman Poma ([1615] 1980: 241) as one of the greatest deities. The pilgrimage to his shrine (Bonavia et al. 1984) united

thousands of people in a trek over the last lap, a race up the "steps of Paria Caca" still visible today. The pilgrims visited the lake where Paria Caca quenched the Huanca deity Huallallo's fires, sacrificed llamas at Paria Caca's dwelling, and, according to Dávila Brizeño ([1586] 1965: 161), "climb[ed] the peak of the snowcap to offer their sacrifices."

The Huarochirí narrators explained their various ancestor *huacas* as heroic offspring of this great regional *huaca*. In the Huarochirí manuscript Paria Caca is said to consist of five beings who are, in various contexts, equal or ranked component selves of a fivefold being. In the overall textual architecture, which seeks to weld *huacas* of diverse origin into a single ideological kindred, the five heroes were felt to have established what were apparently large fraternal sections of society. The main teller of the Paria Caca mythology thinks of the landscape as divided into domains of influence corresponding to the various large highland-derived groups, each defined by putative descent from a persona or child of Paria Caca. These domains are not said to be contiguous territories. They emerge in the form of mythic trajectories: the paths of heroes, along which the heroes achieved society-defining deeds and left areas of dominion over specific lands and people in the scattered or "archipelago" form known from secular and bureaucratic sources.

Yuriy/yumay: concepts of human birth and descent

Colonial Andeans imagined human descent groups as continuations of the genealogy of *huacas*. Intermediate-sized, named ascriptive groups like the Checa "thousand" (whose viewpoint often dominates the text) were fitted into a unified regional ideology by defining their founders as the progeny of Paria Caca's component heroes. Paria Caca's followers thus construed the "original" organization as sib- or clanlike. The spacial foci of superhuman and human genealogy seem to have been symbolized by shrines called *pacarinas* or 'dawning places' that represented founders' and heroes' appearances on earth. *Pacarina* myths are by their very nature peculiar to each group; since the Huarochirí mythology as a whole sometimes seeks to coordinate the mythic legacies of several "originally" separate groups, it is not surprising that *pacarinas* are the theme on which Paria Caca mythology is least consistent. One example is the *pacarina* where a people-producing *quinua* plant grew (chap. 24, sec. 302); the person who composed the chapters seems

uncertain how to reconcile this myth (which Taylor [1987b: 163] takes as a component predating the subsumption of origins in Paria Caca) with other accounts of emergence.

Andeans traced the descent lines of actual humans from revered ancestors, whom they credited with living on as guardians of fertility and order as long as their mummified bodies endured. We know from "idolatry" trials and the testimony of chroniclers that the cult of mummies (*mallquis*) formed the link between the mythology of *huacas* and the purportedly known genealogy of named groups of the living. One witness on trial for "idolatry" explained: "This *mallqui* [the mummy Guaman Cama] was a nephew of the idols Caruatarqui Urau, and Ticlla Urau, and the progenitor of this *ayllo* Chacas, and he was a son of Libiac ['Lightning'], and he nurtured people, multiplied them, guarded their fields and gave them money and wealth" (Huertas 1981: 104–105). Mummified ancestors lived in caves or special houses (chap. 11, sec. 155). Their progeny dressed them richly, periodically "embraced" and feted them, served them with food and sacrifices, and petitioned their approval of major transactions [Guaman Poma [1615] 1980: 1:262–271; Polo de Ondegardo [1571] 1916: 116–119]. Garcilaso ([1609] 1966: 1:76–77) mentioned that mummies of special importance were *huacas* and in Huarochirí it seems to be mummified leaders of successful invasions who achieved this role. The two Huarochirí chapters about the fate of the dead (chaps. 27 and 28) are evasive about mummification but difficult to understand unless one assumes that people preserved human remains in some way. A few Huarochirí passages seem to refer to mummy *huacas*:

The one [*huaca*] called Ñan Sapa was a human being.

Later on, the Inca took away the *huaca* himself.

But they made another one to be his proxy.

This is the one that we know Señor Doctor Francisco de Avila carried away.

They say Ñan Sapa, when he was human, wore the *quisay rinri* in his ears and bore the *canah yauri* scepter in his hands. (chap. 24, secs. 319–320)

In connecting ancestors to living humans, unilineal principles play an explicit role. The myths employ a concept of patrilineage (*yumay* 'sperm') used in relation to a concept of sibling or birth group (*yuriy* 'birth'). The preface tells us that the peoples whose story is to be told here constitute a group by virtue of sharing a father: "I set forth here the lives of the ancestors of the Huarochirí people, who all

descend from one forefather" (pref., sec. 2). The vocative *yaya* 'father' as a form of address is used to express deference to any male authority, human or superhuman.

The most prominent collective ego of the myths, the Checa, thought of their group as defined by mythic descent from one of the component Paria Caca persons; it is not stated to be patrilineal, but the Yauyo subgroup called Morales as a whole is treated as male relative to the Yunca, and the persons whose acts define it are males. Within such clanlike categories, there appear to have been more clearly genealogical patrilineages uniting people with specific rights and duties. Portions of society characterized as patrilineages (*yumay* 'sperm') are mentioned as the holders of hereditary water rights and priesthoods (chap. 7, sec. 91; chap. 31, sec. 445).

When comparisons among sectors of a collectivity are made, whether at a vague clanlike or a more genealogical lineage-like level, they are usually made in terms of birth order within an original sibling set (*yuriy*). Genealogical myths from all over the world "justify existing stratifications by denying them (we are all brothers) while at the same time providing detailed guidance to inequality by distinguishing between 'elder' and 'younger' branches. They also record alliances by tying allied groups into common genealogies" (Vansina 1985: 103). The concept *yuriy* 'sibling group' carries exactly this contradiction. In all cases, siblinghood seems to imply rank even more saliently than it implies solidarity. "The Quinti thoroughly despised the Checa because the Checa were born last" (chap. 11, sec. 153). The notion of unranked kin solidarity is treated as an abstraction or mystique at the highest level of mythic generality: Paria Caca, the union of all Huarochirí-area invader groups, came into being as five unnumbered eggs. The set of eggs could be considered a sibling set, but one without birth order because not yet born. No such transcendent paradox occurs among humans. The transition from power *in ovo* to power in action is also the transition to rank order.

As in many Andean contexts (for example, the political organization of colonial Andean communities), the firstborn or leading member of a set (e.g., noble heads of a village's component *ayllus*) functions within the set as first among equals, but outside the set as the totalizing representative of it. (The political authority of *curacas* over *ayllus*, for example, seems to have worked on this principle.) So, too, among *huacas*. Paria Caca can be considered the first among five brothers (chap. 8, sec. 99), yet at the same time as the overarching deity of

which the five are only parts. In this latter function Paria Caca is often spoken of as the father rather than the brother of the heroes. Chaupi Ñamca has the same structure (chap. 10, sec. 147).

So thoroughly does the ideology of genealogical inequality govern ritual order that the birth of human siblings whose rank order closely approached equality—that is, twins—was seen as a major anomaly warranting the immense expiatory efforts that occupy supplement I.

Naturally there is some tension between rank ascribed by descent and rank achieved through warfare. The “children of Paria Caca” fought for the military supremacy of their ethnic group, but also for precedence among themselves, and this produces anomalies; chapter 17 expresses the Checa claim to have risen above their Quinti rivals by their achievements. Sometimes a group’s junior standing seems to reflect its lesser achieved power. The Concha, a local group described as an *ayllu* (see below), were said to have originally been a *yuriy* of five brothers and a sister; the resulting five groups’ unequal land resources are explained as the result of the first three brothers’ having conquered energetically while the last two lagged or got lost:

... these two [Hualla and Calla] fell somewhat behind.

So, lagging behind, they missed the trail and headed instead toward the Yauyo country, thinking, “Maybe our brothers went over there.”

A long time afterward, only after the other three brothers had finished dividing up the fields and other goods among themselves, they did come back. (chap. 31, sec. 391)

Patrilineal grouping and birth-order ranking do not exhaust the kinship content of the ideology expressed in the manuscript. Some episodes suggest that descent through females also played a large part in the tellers’ idealized vision of social organization. No named principle used in myths of group origin offers a matrilineal counterpart to *yumay*. Yet, in rituals, there is a strong tendency to treat the engendering of females as a separate type of parentage from the begetting of males. In the fertility-giving ritual game of spearing giant dummies called *yomca* and *huasca*,

Once they’d prepared everything, they named one of the effigy bundles Yomca and set it as a target symbolizing males.

The other, the one called Huasca, they set as a target symbolizing females.

After they set them up, the men would put on their best clothing and feather ruffs called *tamta*, and they’d begin to let fly at the targets. (chap. 24, sec. 328)

Then they threw spears at the Huasca effigy for females, saying,

“She’ll give me daughters and all kinds of food!” and then at the Yomca effigy, saying,

“He’ll give me sons, agave fiber goods, and all kinds of animals!” (chap. 24, sec. 334)

Separate female *huacas* were credited with being great producers of female offspring: “Chaupi Ñamca was a great maker of people, that is, of women; and Paria Caca of men” (chap. 13, sec. 172). *Mama* ‘mother’ was a term of honorific address strictly parallel to *yaya* ‘father’. Certain priestesses held rank apparently equal to that of priests (chap. 13, sec. 178; chap. 31, sec. 417; see also Avila [1645] 1918: 65). Overall, the implicit suggestion seems to be that male and female fertility run through separate channels, which cross over each other in a braidlike pattern as each generation reproduces itself sexually. The female channel of fertility was fortified by a priestly religious structure, as was the male. The Huarochirí data seem compatible with—but do not declare the existence of—inheritance of some religious identity or obligation through parallel descent (Lambert [1977] 1980: 37; Silverblatt 1987: 20–39).

Ayllu: corporate landholding collectivity self-defined as ancestor-focused kindred

The tellers of the myths habitually described their society as built of collectivities called *ayllus*. In many passages the *ayllu* figures as the basic unit of ritual action:

... in the old days, people used to go to consult Paria Caca at night, taking along llamas or other things.

They used to go taking turns, *ayllu* by *ayllu*. (chap. 24, sec. 309)

A person’s immediate religious responsibility was to his or her *ayllu*’s senior members. When Lanti Chumpi discovered what she guessed might be a new *huaca* (perhaps a buried figurine or unusual stone), her first thought was to take the find to them (chap. 20, sec. 237). We know that each *ayllu* made its own claim to religious authority because each told its own version of certain myths (chap. 13, sec. 187).

But what was the makeup of the *ayllu*? The classic sources look unhelpful at first glance. The great lexicographer Diego González Holguín ([1608] 1952: 39–40) gives a definition of *ayllu* so broad as to include virtually all kinds of descent, kinship, and even territorial solidarity. Avila thought an *ayllu*

was something like the Spanish kin group defined by a shared surname (Arguedas and Duviols 1966: 257), which would suggest patrilineal bias.

Internal evidence from the manuscript, however, suggests something other than a corporate unilineal principle. Chapter 7 (sec. 91) says, "There is within this *ayllu* a patrilineage [*yumay*] which bears the name Chauincho." From this we infer, first, that *ayllu* is a separate concept from patrilineage, and second, that an *ayllu* could contain more than one patrilineage. *Ayllu* is therefore not the minimal or the only unit of descent ideology. However, the fact that the passage just cited goes on to speak of the Chauincho patrilineage as an *ayllu* (with a crossing-out eloquent of hesitation on someone's part) suggests that the term *ayllu* could subsume the concept of lineage. This makes it difficult to distinguish the two in certain instances.

We also know, because chapter 13 (sec. 187) implies as much, that a given territorial settlement (*llacta*; see below), which we usually gloss 'village', could have multiple *ayllus*: "in each village, and even *ayllu* by *ayllu*, people give different versions . . ." People understood the internal dynamics of their local communities as a play of more or less rival *ayllus*.

The tellers saw rights to land and other immovable assets as lodged in the *ayllus*: "As soon as Tutay Quiri's children had expelled those Yunca, they began to distribute among themselves, according to their own *ayllus*, the fields, the houses, and the *ayllu* designations" (chap. 24, sec. 316). This passage then tells us that even the invaders felt bound to redefine their own organization on the pattern of preexisting local *ayllus*, which suggests they had a high degree of corporate definition and legitimacy as well as important functions. Since it goes on to say the Yasapa *ayllu* people were silversmiths, one may further speculate that some *ayllus* practiced, or at least were traditionally associated with, occupational specialties.

So it is relatively safe to think of the *ayllu* as a named, landholding collectivity, self-defined in kinship terms, including lineages but not globally defined as unilineal, and frequently forming part of a multi-*ayllu* settlement. But what exactly were the kinship criteria of inclusion? This question, an ancient mare's nest in Andean research, yields partly to Karen Spalding's exploration (1984: 28–30, 48–52; see also Castelli, Koth, and Mould de Pease 1981). González Holguín shows us that the most general sense of *ayllu* and its derived words is "that of grouping elements or persons together on the basis of similarity or species, or dividing up a larger

group on the basis of the same criteria" (Spalding 1984: 29). "Similarity or species" could mean taxa such as animal or plant species, but, when applied to people, *ayllu* usually meant "descendants of a common ancestor." "The term was commonly defined as any group—family, lineage, or generation—whose members were related to one another through their descent from a common ancestor" (Spalding 1984: 28–29), that is, an ancestor-focused bilateral kindred. Zuidema (1973: 16–21) has developed the argument toward a detailed model of ancestor classification and cultic organization.

Spalding's definition has useful corollaries. First, it reminds us that, like such spatial terms as *pacha*, *ayllu* is the name of a concept of relatedness and not of an entity with specific dimensions. It has no inherent limits of scale; in principle, it applies to all levels from sibling groups to huge kindreds, clanlike groups, or even whole ethnic groups defined by reference to common origin and territory. An *ayllu* can readily be understood as consisting of multiple patrilineages (or, in principle, matrilineages) insofar as any given member can trace descent from the "founder" or apex via a given child of the "founder" (and so forth, in potentially segmenting ramifications). Platt ([1978] 1986: 230–231) has clearly demonstrated a varied-scale usage among modern Bolivian highlanders, who reckon upward from the "minimal *ayllu*"—small clusters of patrilocal rural neighborhoods—up through "minor," "major," and finally "maximal" *ayllus* that ascend to include the entire ethnic group. The various levels of *ayllu* organization may each have specific terminologies, typically referring to their political functions. For example, in Platt's area, the "minimal" *ayllu* was called *cabildo* (civic council) in its political functioning, and Spalding (1984: 51) adduces a Spanish witness who understood the Inca decimal term *pachaca* ('hundred') to mean an *ayllu* of a hundred households or over, suitable by its size for treatment as an administrative entity in its own right. In the Huarochirí manuscript, the usage of *ayllu* terminology becomes less confusing if one recognizes that an *ayllu* may be part of a larger *ayllu*. In this sense, the "children of Paria Caca," the large (perhaps ethnic) group that forms the mythology's collective subject, a group of people "who all descend from one forefather" (pref., sec. 2), is a "maximal *ayllu*."

Second, as Spalding also emphasizes, for practical purposes it was not precise genealogy that finally decided who belonged to an *ayllu*, but rather social conduct—including political alliance—befitting a genealogically connected person. As with

many concepts in the domain of kinship, *ayllu* may be understood partly as an ideology built up to explain patterns of behavior rooted in the residence rules, which in turn often reflect the demands of a given geographical, technological, and demographic reality. Access to *ayllu*-held assets (and claims to collective *ayllu* ownership continued far into the colonial era) was given in return for exchanged labor and exchanged ritual participation on a kinship model. One can see in the myths of Concha *ayllu* (chap. 31, sec. 391) that genealogical connection alone was insufficient to bestow land on the two Concha lineages that had become politically disconnected. But adoption combined with political or marital alliance was seen as sufficient to create *ayllu* entitlements even when there was no genealogical tie (chap. 31, sec. 403). *Ayllu* was a political fact, and cultic practice lodged in it regulated practical matters of economy and power.

Llacta: 'village' as cultic and territorial unit

By the time the Huarochirí manuscript was written, colonial coercion had overhauled the relationships between people and territory. If the prehispanic Huarochirí region resembled those known elsewhere in the Peruvian Andes, each of its major settlements probably controlled "archipelagos" of mostly non-nucleated residence spread over the various productive tiers of the mountain slope and the coast. But by 1608 the parishes where Avila was working—for example, San Damián de Checa, focal point of the manuscript—no longer entirely followed this model. Villages like San Damián had been carved out in a scheme of forced resettlement (*reducción*) that Viceroy Francisco de Toledo had begun almost forty years earlier. When administrators herded Andean peasants into resettlement villages (Gade and Escobar 1982; Spalding 1984: 214–216) they fused together multiple Andean settlements—the ones called *llacta* in prehispanic usage—into a larger, more accessible, more governable and exploitable "Indian town" on a Spanish plan with plazas, churches, and streets laid out on a grid. Most of the places with Spanish (saint) names in the manuscript belong to this Toledan reordering of territory.

Why, then, did people keep orienting their religion around a map that no longer strictly fit the productive space of politics and economy? After the initial coercions of resettlement, from the 1580s on, older relations to the landscape partly reasserted themselves both in practice and in ideology. In practice, productive efficiency and the chance to

hide from tribute collectors enticed people back upward into the non-nucleated pastoral hamlets of the heights and downward into relatively hidden farming settlements in river canyons (Málaga 1974). Nor, in imagination, did the establishment of a Christian sacred geography centered on parish churches empty the landscape of non-Christian meaning. The Huarochirí storytellers c. 1600 saw all around them their parents' ruined "old settlements" (*pueblos viejos*, a common term in papers of the period) and their ancestors' stone "houses of the dead." The pre-resettlement scheme of territoriality, a mental map of social groups attached to place-deities and localized ancestors, still formed a complete and intelligible shadow-geography projected onto the landscape that colonial organizations had already reshaped *de facto*. Immense *huaca*-studded spaces of canyons and high tundra, fields and trails, embodied an Andean world view at least as cogently as the small, dense space inside the new churches figured Christianity. Since outdoor space was also the space of work and livelihood, the very cycles of herding and farming continuously retaught what Sunday sermons sought to erase.

The commonest term for the anciently defined settlement, *llacta*, is not the simple equivalent of 'town' or 'village', which denote a portion of territory or the legal corporation that governs it. A *llacta* in its old sense might be defined as a triple entity: the union of a localized *huaca* (often an ancestor-deity), with its territory and with the group of people whom the *huaca* favored. The word *llacta* could thus be used to mean the deity that was master of a settlement. In chapter 24 (sec. 325), where the original text says that the "*llactas*" divided up the llama herds among themselves, a marginal note clarifies that this means the "idols," that is, the *huacas* that defined the *llactas*, and our translation uses the latter sense.

The word *llactayuc* (glossed 'aborigine', 'native', or 'founder') therefore means something more complex than 'original resident'. It implies both being possessor of a local *huaca*'s sanctum and being possessed by it. When the heroes of the myths conquered lands and peoples, they also acquired local ritual obligations and even, it seems, grafted themselves into the genealogical categories reckoned from the *huaca*: "As we said in another chapter, this land was once all full of Yunca. As soon as Tutay Quiri's children had expelled those Yunca, they began to distribute among themselves, according to their own *ayllus*, the fields, the houses, and even the *ayllu* designations" (chap. 24, sec. 316).

The chain of human movements and transformations by which the Checa people explained their social organization emphasizes at every stage a pattern of *huacas* among whose territories human groups move and fight. *Huacas* might travel on the way to establishing their dwellings but once victorious they had—they *were*—their locales, and it was the deity-locale that gave wealth and identity to human groups. The Checa explained all changes, both prehispanic and recent, with reference to the geography and the relative fortunes of *huacas*. To the tellers, the explanation of society and its genesis was written out in the landscape—even where Spaniards had wrecked every visible monument or substituted crosses for *huacas*.

Even now *llacta* is essentially the name of a relationship, not of a type of settlement. Like *ayllu*, the term implies no particular scale. In modern Quechua one calls any unit from one's hamlet to one's country "my *llacta*." Since the word gives no suggestion of size, either demographic or spatial, the manuscript usually leaves us guessing as to whether a given *llacta* is a hamlet, village, town, city, region, or country. The answer will come, if at all, from archaeological work as yet undone. Most of the actions in the myths seem from context to concern agricultural villages, and in most cases we have glossed *llacta* as 'village'. But 'town', 'city', 'region', and 'country' are hardly out of the question. When one visits the immense ruined city of Cajamarquilla, within the space of the manuscript but predating it, one wonders if the mythic scene could not have been far more urban than generally imagined.

The original text

The Huarochirí manuscript is ff. 64r–114r of manuscript number 3169 of the Biblioteca Nacional, Madrid. The original lacks title, date, and author. It is the fourth item among six manuscripts about Andean religion, from Francisco de Avila's own collection, all bound together. Among these writings are whole texts and abstracts from some of the most important sources on the subject, such as the *Relación de las fábulas y ritos de los Incas* ([1575?] 1959) of Cristóbal de Molina "cuzqueño" and the original of Joan de Santa Cruz Pachacuti Yamqui Salcamaygua's partly Quechua *Relación de antigüedades deste reyno del Perú* ([1613] 1968) as well as works by Juan Polo de Ondegardo and Garcilaso Inca de la Vega. It also contains the manuscript of Francisco de Avila's *Tratado*, a translation, or more accurately a paraphrase with digressive commen-

tary, of the same material contained in chapters 1–7 of the Huarochirí manuscript.

The Huarochirí manuscript is written in an ordinary competent scribal handwriting. The chapter divisions and titles used here are from the original. But the original does not have a consistent system of paragraph divisions or sentence divisions: some sentence boundaries are ambiguous. Various pen strokes resembling parentheses, commas, and other small symbols occur in the text, but they do not seem to add up to a consistent system of punctuation. (Scribal papers of the period normally lack consistent punctuation.) The text is in a variety of Quechua with the exception of the Spanish chapter headings of chapters 1–6, some borrowed Spanish words, and some marginal queries and annotations, probably by Father Avila. Irregular pagination and handwriting size indicate that the manuscript may have been compiled in noncontinuous bursts of effort. The text comes "from the hand and pen of Thomás," according to a marginal note over halfway through the text (chap. 23, sec. 291), but we do not know anything about "Thomás" save that he seems (from his Quechua-influenced errors in Spanish) not to have been a native—or a particularly accomplished—Spanish speaker. Whether he was only an amanuensis or was also the compiler of the testimonies is unknown. Thomás' practiced handwriting suggests he may have been an *escribano de naturales* (bilingual scribe), village council scribe, or other native functionary of the colonial regime.

The date of the Huarochirí manuscript is debatable. Avila's *Tratado* partially paraphrases the manuscript, or a draft of it, and bears the date 1608, so the manuscript seems *prima facie* to predate the end of 1608. But by how much? In chapter 9 (sec. 133) a narrator tells us it is *cay pisi huatallarac*, which at first glance seems to mean 'scarcely a year', since Father Avila came onto the San Damián scene. Were that reading unambiguous, we could agree that the date must be 1598 because, as Duviols ascertained, Avila arrived in Huarochirí in 1597 (Arguedas and Duviols 1966: 235). But *cay pisi huatallarac* could also mean 'just a few years', admitting a later date. And as Antonio Acosta's important researches (1987a, 1987b), summarized in the next section, suggest, there are strong reasons to consider dates considerably later than 1598.

The possible genesis of the text in the local conjuncture

The common attribution of the manuscript to Father Francisco de Avila is erroneous, but he cer-

tainly was a key figure in the local conjuncture that forced the manuscript into being. The following paragraphs summarize recent research by the Spanish historian Antonio Acosta, whose archival inquiry (1987b: 551–616) brings the local crisis into clearer focus and suggests a more plausible genesis for the text than the self-serving version available from Avila's own testimony.

The pioneer of seventeenth-century anti-*huaca* persecution was born in Cuzco probably in 1573, the abandoned, perhaps illegitimate baby of an unknown couple. The Spanish couple who found him at their doorstep gave him the Spanish name Francisco de Avila Cabrera. Avila later, but dubiously, claimed he knew his ancestry to be noble; others claimed he was half-Indian, and to his misfortune this became the common opinion. Acosta (1987b: 557–558) finds reason to question it. If Avila thought himself mestizo, it would have been against his interest to say so given the racial impediment to ordination during his youth, so his silence on the point cannot be decisive. One witness in 1610 called him mestizo, without proof, and a 1641 witness thought he looked Indian (Acosta 1987b: 556–557, note; Spalding 1984: 253–254). But these accusations of mixed birth came after Avila had risen to prominence and could well have been falsehoods intended to sabotage his career. Such doubts leave room to question the common supposition that his vengeful attitude to Indian religion grew from the pain of mixed (therefore impure and stigmatized) birth or from resultant abandonment.

Avila showed talent in a Cuzco Jesuit school and went to Lima to study at San Marcos University in 1592. In 1596 he was ordained and in 1597 posted as curate to San Damián de Checa, one of the *reducción* parishes near Huarochirí. It was a plum appointment. Avila's Jesuit connections probably had much to do with his career there, for the Jesuits over twenty years earlier had pioneered what they recognized as an unusually rich mission field—one where Andean religion had already shown strong resistance to some forty years of intermittent Catholic intervention. One passage (chap. 20, secs. 244–247) sketches the fluctuating, but never extinguished, fortunes of the *huaca* priesthood through three generations of colonial leadership.

Even within normal limits of law, a curate like Avila had access to ample native labor. But, in addition, by the date of Avila's arrival it had become usual though illegal for priests serving Indian parishes to parlay their ecclesiastical holiday levies and salaries, combined with legal leverage over native nobles, into business enterprises large enough to rival the incomes of rural Peru's opulent semi-

feudal civil elite (Lavallé 1982). In time, it seems, this sort of practice led Avila into controversy. When he was a new curate, in 1598, an inspection praised his pastoral work. But a sign of conflict appeared in a 1600 "secret inspection and hearing" that turned up accusations of commercial abuses. Although he was officially cleared, the inspection reveals that like many rural clerics he had begun to make local enemies.

Four later inspections left Avila's record superficially restored. In 1607 Avila gathered testimonies on his "life and morals" to buttress his continuing appeal for a higher post. At the last minute, however, he met a fateful opposition: a faction of his native parishioners mounted an ecclesiastical lawsuit against him. Both colonial chieftains and commoners accused him, and their accusations were more numerous than in ordinary cases of this sort (frequent, to be sure, in the period). They accused him of absences from his parish (perhaps, Acosta suggests, he went to Lima in connection with his studies toward the doctorate; 1987b: 574), of charging excessive fees, and of exacting illegal labor levies. Like many other curates, he was said to collect huge amounts of native crops and sell them for private profit. Maybe natives tolerated this because priests of the Andean *huacas*, too, had enjoyed huge gifts of produce (Acosta 1987b: 576). But Avila may have gone too far in helping himself to his parishioners' labor, which he used to support his partly illegal business enterprises in gunpowder, charcoal, and textile manufacture and to build himself a house in Lima using beams he made his parishioners remove from the roofs of their pre-resettlement village. In a period of declining native population, curates' rising and increasingly arrogant expectations of cheap or unpaid labor acutely angered some natives. It was apparently Avila's project to open a new textile factory at native expense that finally provoked chiefs of the "thousand" of Chaucarima to litigate against him.

The Indians went beyond economic grievances to introduce a doubt about Avila's religious and moral regularity, alleging sexual abuses of various native women (some married) and the fathering of an illegitimate son. He even forced Indian women, "under physical threats, to suckle at their breasts the same puppies which . . . when grown, chased and killed the Indians' chickens" (Acosta 1987b: 574). He beat up villagers, including his sacristan, for not serving his desires zealously enough. Once at a christening he hurled the oil at his sacristan's chest. Accusers said he encouraged Indians to give their venerated ancestors silver (see chap. 21, sec. 262) and then himself collected some of it (Acosta 1987b: 572).

If true, this suggests that in the early days of his curacy Avila had no urgent scruples about a *modus vivendi* with "idolatrous" religion. Apparently co-existence entailed the curate's acquiring traditional privileges of *huaca* priests—access to women, labor donations, crop gifts—and, in return, tolerating (or even profiting from) worship of *huacas* on Catholic holidays (see chap. 7; chap. 9, sec. 125).

Avila spent some time in a church prison while charges were pending. But his emissaries pressed the natives to recant their accusations, and some did. The record of the trial contains a neat sheaf of the recantations, witness by witness, each with a cover sheet bearing Avila's elegant handwriting. One of Avila's allies in collecting these was the same Cristóbal Choque Casa whose visionary combats chapters 20 and 21 glorify, at that time an obscure son of native nobles. He prepared one of the recantations in Quechua (Taylor 1985: 180). In Acosta's judgment (1987b: 596), "It is believable that the narrative [i.e., the Huarochirí manuscript] could have been compiled at Avila's order in 1608, when his lawsuit with his Indians was in full swing, maybe on his emergence from prison and as a part of his reaction against the Indians who had accused him." Avila probably secured the testimony through one or more native cat's-paws who either interviewed anti-*huaca* natives or else secured the testimony of *huaca* believers by lulling them into unawareness of their testimonies' future utility. Cristóbal Choque Casa probably played a key role. It is hard to guess what parts fear, self-interest, and sincere conversion (Cristóbal's or others') played in the extraction of testimonies. Certainly intimidation played a part; for example, Avila made a point of interrogating Indians made vulnerable by frightening illnesses (Acosta 1987b: 600–601, 603). Although in later years Avila never mentioned the manuscript's existence, he probably did use it in hunting down *huacas*.

When the court responsible for the Indians' suit took depositions in San Damián, a decision only minimally damaging to Avila appeared likely. But instead of letting procedure take its course, he seized the offensive by asking the Ecclesiastical Chapter of Lima to authorize an inquiry into "idolatries" under canon law. Avila, according to his own much later testimony written in 1645 (1918), then led the ecclesiastical judges to the *huacas* Llacsay Huancupa (perhaps equivalent to Llocllay Huancupa, chaps. 20 and 21), Qqellccas Ccassu (probably *quillcas caxo* or 'Engraved Rod', chap. 24, sec. 320), and Maca Uisa (chaps. 18, 19, 23). In later testimonies Avila claimed his campaign had arisen only from disinterested zeal, but Acosta's research makes it

believable that the campaign was undertaken in revenge against the natives who had accused him of venality and immorality.

According to the 1645 testimony (Arguedas and Duviols 1966: 220), it was Cristóbal Choque Casa's revelation that the feast of the Assumption in Huarochirí for 1608 would be used to cover a rite of Paria Caca that provoked Avila to undertake massive anti-*huaca* campaigns. It is likely, of course, that in reality nothing new was being revealed. The only new element was Avila's urgent need for favorable publicity. Avila intensified his sleuthing in 1608 and procured public confessions of "idolatry" in a parish meeting that stirred and mobilized his pro-Christian allies. He asked the Jesuits for assistance in confessing a deluge of penitents and was sent two helpers. They pioneered the routine of breaking images, burning mummies, extracting public confessions, and punishing believers that was to become the periodic scourge of Lima archdiocese Indians until at least the 1660s. Avila was able to collect a great deal of stolen religious gear and forced testimony. By September 1609 he was amply ready to dictate his answer to the native accusations, laying the groundwork for a false autobiography that painted the accusations as a reaction to his anti-*huaca* zeal.

It was also during this crisis that Father Avila prepared the *Tratado*, that unfinished pamphlet retelling and commenting on the same myths that make up chapters 1 through 7 of the Huarochirí manuscript. The relation between the redaction of the Huarochirí manuscript and Avila's work on the 1608 *Tratado* has been debated between Hartmann (1981) and Taylor (1982, 1987b: 17–18). The former thinks it probable that Avila based his treatise on the manuscript, while the latter thinks that the two are separate workings of a prior source probably consisting of interview notes. In either case, it is likely that Avila intended the *Tratado* as a readable exposé designed to win Spanish support for his career. At the time of the *Tratado*'s composition Avila needed public support because the archbishop of Lima, Toribio Mogrovejo, had set policy against the aggressive persecutions that Avila favored.

But, luckily for him, an opponent of gradualist policy toward "backsliding" Indians and a bitter foe of *huaca* religion, Bartolomé Lobo Guerrero, succeeded to the Archbishopric of Lima in October 1609. According to Taylor (1987b: 18), Avila left continued compilation of anti-*huaca* intelligence to an Indian associate. Although he did read and annotate part of the product, the Huarochirí manuscript, he never fully edited it.

A bare ten days after Lobo Guerrero's accession,

Avila seized the moment to make his case behind the archbishop's closed Lima doors. Shortly afterward he staged a public propaganda spectacular. Avila had carted a load of *huacas* and mummies "800 years old" into Lima, perhaps the ones he tracked down thanks to the testimonies recorded in the manuscript. Amid immense pomp and publicity he directed a giant auto-da-fé in Lima's great cathedral square on December 20, 1609. Thousands of natives were forced to attend. A spectacle of music, Quechua sermons, and whipping of believers culminated in public sentencing. Among the victims was Hernando Paucar, the same ex-priest of Chaupi Namca and early denouncer of *huacas* whose confessions had opportunely helped Avila. Paucar was tied to a post, lashed two hundred strokes, and condemned to confinement among Jesuits in faraway Chile. Avila then burned the *huacas* and the ancestral mummies, to the inconsolable grief of those who felt themselves orphaned.

Four days later an ecclesiastical judge absolved Avila of all the accusations pending. Moreover, he was granted the title of "*visitador* [traveling judge] of idolatries."

These events marked the opening salvo of the "extirpation of idolatry" campaigns, in which Avila and his Jesuit allies developed standardized methods to destroy the partly clandestine forms of Andean religion that had grown out of the long confrontation with Christianity (Duviols 1972). Within a year of becoming *visitador*, he executed repressive campaigns in the main parishes that the Huarochiri manuscript mentions and collected, as he claimed, some 5,000 "idols." In 1611 he went with a Jesuit crew to climb the heights via Yampilla just outside Huarochiri (chap. 31, sec. 409). The climbers trekked for several days up what may have been the ancient pilgrimage route. After the ascent they followed a stairway hewn into the rock (Bonavia et al. 1984), up to what Avila believed to be the shrine of Paria Caca himself. They demolished everything they could. Then the extirpators "put in its place a cross and in the afternoon they returned to San Lorenzo de Quinti, where [local people] received him with illuminations, and the Indians said in their own language, 'Paria Caca has died'" (Duviols 1966: 224).

Avila continued to campaign widely and became an influential figure in the Jesuit-centered anti-indigenous movement that intermittently lashed the archbishopric for most of the seventeenth century. While legally separate from the Inquisition, and in some respects different from it, the "extirpations" were to inflict on Andean society some of the same sufferings, and the same clandestinity,

that the Inquisition visited on Iberian heterodoxy. Avila's track of destruction crossed the wanderings of the great native chronicler Felipe Guaman Poma de Ayala ([1615] 1980: 3: 1017, 1022–1023), who met some of his victims and, notwithstanding his own dislike of *huaca* religion, cursed Avila for his greed and mercilessness: "Oh what a fine doctor, where is your soul? What serpent is eating you?"

But if many of "the people called Indians" had reason to hate Avila, many of the Spanish, and not just his Jesuit allies, had cause to rejoice at his success. One reason was that *huaca* hunting appealed to clerics' and laymen's greed for treasure. Spanish law allowed confiscation of pagan deities' wealth, and the persecutory movement that Avila promoted opened a rich vein. Guaman Poma was among those who suspected that Avila's motives included the theft of precious objects belonging to *huaca* cults ([1615] 1980: 3: 1022–1023). The anti-Andean campaigns also offered career opportunities to Peru's numerous churchmen at a time when the church was hugely overstaffed relative to its parish infrastructure.

Avila built a long and prosperous career on these campaigns and was to win renown for his anti-*huaca* scholarship as well as for his militancy in missionizing. In 1611, at Archbishop Lobo Guerrero's request, he wrote a report on "idolatrous" domestic rituals and local deities. After a series of attacks on deities mentioned in the Huarochiri manuscript and in other places, in 1615 he wrote at the request of the new viceroy, Príncipe de Esquilache, a project on the means to achieve "real conversion." The next year he conducted a gigantic tour of repression affecting some 35,000 persons. He wrote extensively on ways to influence and intimidate *huaca* worshipers, emphasizing both intimate persuasion and institutional ways to confine those sorts of Indians (notably the sons of native nobles) thought prone to lead or protect clandestine worship.

In 1618 he won a mid-ranking post in the Archbishopric of La Plata (seated in Chuquisaca, now Sucre, Bolivia) and held the job for fourteen years. Why the church hierarchs decided to employ him in a place so far from his political base is unknown; nor is much known about his career there. In 1632 he returned to the Cathedral of Lima to serve the newly appointed archbishop, Hernando Arias de Ugarte, an old acquaintance, as a canon of the Lima Cathedral. He came to be known as a durable eminence of the church, popular among Spaniards for his charitable donations. Almost at the end of his life, he petitioned to enter the Jesuit order, but his alleged mestizo background was used to thwart him. When in 1641 Archbishop Pedro Villagómez

saw fit to remobilize the old persecutor as instructor for what was to become the second great wave of "extirpation," Avila seized the occasion to build his own monument as the "discoverer" of crypto-Andean heterodoxy. The self-portrait he painted in the 1645 preface to his *Tratado de los Evangelios* (Treatise on the Gospels) enduringly and, as Acosta shows, misleadingly influenced his historic image. The treatise reached the press in 1648, the year after his death. Its two volumes of Quechua and Spanish sermons, a little-known monument of literary Quechua's Baroque florescence, memorialize Avila's vision of a Counter-Reformation culture in Quechua.

Some twenty-three years after the making of the manuscript, Don Cristóbal still figured in a Concha lawsuit as a minor native official (Taylor 1983: 266, note, the date of Choque Casa's signature is 1631, not c. 1660 as Taylor holds). Certain of the *curacas* mentioned in the manuscript appear in tribute records and lawsuits both before and after the manuscript. In general the careers of Cristóbal Choque Casa and the other Indian makers of the Huarochirí manuscript remain obscure.

Among provincial religious sources the Huarochirí text has no peer, but it has many companions. Detailed testimonies about peasant and provincial belief appear, for example, in the "extirpation of idolatry" trials of which the Huarochirí crisis (chaps. 20–21) was a forerunner (Acosta 1987a; Duviols 1972, 1986; Millones 1967; Silverblatt 1987). Some of the Catholic priests who organized "extirpation" themselves wrote monographs on the Andean provincial religions and how to persecute them (Albornoz [1583?] 1984; Arriaga [1621] 1968; Avila [1608] 1966). Many missionary treatises and reports from the field reveal local cults and the memories of older practice in vivid detail (for example, Calancha [1638] 1974–1982; Hernández Príncipe [1613] 1919, [1622] 1923). After the waning of the "extirpation" campaigns, the record becomes thinner but still workable through, for example, trials of shamans implicated in political assassinations via magic (Dammert Bellido 1974, 1984; Millones 1984; Salomon 1983).

There may be room for doubt about some extirpators' personal sincerity, but little doubt that they played on widely believed ideological propositions. Local social conflicts like those of Huarochirí c. 1598 conspired with endemic conflicts arising from challenges to the Spanish state's commercial and religious hegemony to infuse in Jesuits and other anti-Andean militants a grim seriousness. Fear of "heresy" (meaning Protestantism and the

northern European powers beginning to rival Spain) and enduring hatred against Iberia's Muslim and Jewish cultures, long since driven into clandestinity, helped clerics persuade the state that the fight against Andean religion contributed to a decisive world-historical struggle. The papers born of this effort offer ethnographic evidence, but because of their heavy ideological freight must be read with caution.

Given these facts, one might expect to find the particulars of Andean religion, and eventually the very fact of Andean worship, distorted in the direction of familiar European fantasies of anti-Christianity: satanism, the black mass, and so forth. Such distortions did happen, especially at later dates and more urban locations than those of the Huarochirí manuscript (Silverblatt 1987: 159–196). Likewise, one might expect that missionaries would picture Peruvian *huacas* in the image of more familiar "gentile" deities or "idols"—for example, the *dei* of Greco-Roman antiquity. This also did occur (MacCormack 1985).

But to a surprising degree the testimonies of the victims retain freshness and unfamiliarity that give *prima facie* evidence of an origin other than Iberian demonology or the classical legacy as enshrined in seminary curricula. Perhaps because many of them were provincials lacking the know-how to package and process their culture in terms familiar to Spanish speakers, the myth-tellers in the Huarochirí manuscript created an image still largely framed by conceptual categories proper to local thought. The Huarochirí stories retain for us a certain irreducible strangeness, resistant to translation because, unlike the preprocessed Inca lore available in chronicles, they were seized by Spain but not made for it.

Previous editions of the Huarochirí manuscript

The following are the extant complete editions of the text. No attempt is made to cover excerpts, retranslations, or popularizations. (For critical discussion, see Hartmann 1975, 1981; Taylor 1982.)

- Adelaar, Willem F. H. 1988. *Het boek van Huarochirí: Mythen en riten van het oude Peru zoals opgetekend in de zestiende eeuw voor Francisco de Avila, bestrijder van afgoderij*. Amsterdam: Meulenhoff. Dutch translation (no Quechua) with introduction and glossary.
- Arguedas, José María (trans.) and Pierre Duviols (ed.). 1966. *Dioses y hombres de Huarochirí: Narración quechua recogida por Francisco de Avila [c. 1598]*.

- Lima: Instituto Francés de Estudios Andinos/Instituto de Estudios Peruanos. [Republished 1975] México: Siglo XXI.
- First full and published Spanish translation. Includes Quechua. Although less accurate than Taylor's translation of 1987, Arguedas' translation is esteemed for literary merit. Duviols' biobibliographical essay on Avila, questioned by Acosta, remains important for its pioneering historic inquiry and for its primary source appendices. These include Avila's *Tratado* and other papers relevant to Avila, such as extracts of important Huarochirí reports by mostly Jesuit observers. Mexican republication is incomplete.
- Galante, Hipólito (ed. and trans.). 1942. *Francisco de Avila de priscorum Huaruchiriensium origine et institutis* . . . Madrid: Instituto Gonzalo Fernández de Oviedo.
- Contains the thirty-one chapters but not the appendices. Introduction in Latin, facsimile, transcription, critical notes, glossary of hispanisms, Latin translation, Spanish retranslation by Ricardo Espinosa M.
- Mejía Xesspe, Toribio [unpublished translation]
- Toribio Mejía Xesspe, a bilingual scholar who worked closely with Julio C. Tello in the pioneering days of Peruvian prehistoric archaeology, left in his posthumous estate an as yet unpublished version of the thirty-one chapters of the Huarochirí manuscript. Prepared in 1941–1943, it includes a rephonologization, a Spanish translation attempting morpheme-by-morpheme correspondence, an incomplete "literal translation," and an incomplete "free translation" with pictorial sketches (Szemiński 1989).
- Szemiński, Jan (ed. and trans.). 1985. *Bogowie i ludzie z Huarochirí*. Cracow/Warsaw: Wydawnictwo Literackie.
- Polish translation with brief introduction and general glossary. The title means 'Gods and Men from Huarochirí'.
- Taylor, Gerald (ed. and trans.). 1980. *Rites et traditions de Huarochirí: Manuscrit quechua du début du 17e siècle*. Série Ethnolinguistique Amérindienne. Paris: Editions l'Harmattan.
- Bilingual edition containing introduction, transcription with variorum notes, and French translation with interpretative notes providing original solutions to some dialectological and lexical problems. Interpretative glossary, bibliography, and supplementary notes follow.
- Taylor, Gerald (ed. and trans.), with Antonio Acosta. 1987. *Ritos y tradiciones de Huarochirí del siglo XVII*. Historia Andina, no. 12. Lima: Instituto de Estudios Peruanos/Instituto Francés de Estudios Andinos.
- Bilingual edition containing interpretative introduction, transcription, "phonological reconstitution," Spanish translation, bibliography, several indices (to Quechua words in the translation, hispanisms in original, names of places and groups, names of *huacas* and heroes, names of rites, and names of historical personages). Copious critical, variorum, and interpretative notes closely address dialectological, geographical, and lexical problems. The preferred study edition.
- Trimborn, Hermann (ed. and trans.). 1939. *Francisco de Avila: Dämonen und Zauber im Inkareich*. Quellen und Forschungen zur Geschichte der Geographie und Völkerkunde, vol. 4. Leipzig: K. F. Koehler Verlag. [Republished with additional introduction and notes as] Hermann Trimborn and Antje Kelm (eds. and trans.). 1967. *Francisco de Avila. Quellenwerke zur Alten Geschichte Amerikas Aufgezeichnet in den Sprachen der Eingeborenen*, vol. 8. Berlin: Ibero-Amerikanisches Institut/Mann Verlag.
- The earlier (1939) edition was the first publication of the original Quechua. Research for the 1939 edition was interrupted by the Spanish civil war; later bombing destroyed most copies. Contains preface, bibliography, introduction, transcription, German translation with notes, glossary, exegesis (1967), index of proper nouns. Hartmann (1975, 1981) judges that superior accuracy justifies the republication.
- Urioste, George (ed. and trans.). 1983. *Hijos de Pariya Qaqa: La tradición oral de Waru Chiri (mitología, ritual, y costumbres)*. 2 vols. Foreign and Comparative Studies, Latin American Series, no. 6. Syracuse: Maxwell School of Citizenship and Public Affairs, Syracuse University.
- Bilingual Quechua-Spanish edition: introduction, transcription with variorum notes and marginal material, translation with variorum and interpretative notes, indices (to proper nouns, Quechua words in the translation), bibliography.
- An unreliable English version of Avila's *Tratado* by Clements R. Markham [Avila [1608] 1875] was the first modern edition of the Huarochirí mythology.

The character of the present translation

This book is a fresh working not based on any previous translation (including Urioste's 1983 Quechua-Spanish edition). Our study started from a newly made transcription from microfilm (reproduced here), collaboratively rendered into English by the co-authors. It is meant as a reader's edition rather than a study text. Scholars in need of a study edition should turn to Gerald Taylor's Quechua-Spanish version (1987b), which offers abundant apparatus as well as fuller contextual references. The 1966 Arguedas and Duviols edition also contains indispensable primary sources and bibliographic detail. The present version refers to other translations by way of mentioning some significant discrepancies, difficulties, or contextual findings but does not provide full coverage of alternative renderings.

We hope to address nonspecialists and have striven not only for accuracy but also for immediacy. We have intentionally left enough unresolved

strangeness on the surface to keep a reader aware that this text is untranslatable in all the usual senses, and perhaps a little more untranslatable than most.

Aside from the hazards intrinsic to all translations, Huarochirí readers face some specific ones.

Language substrates and non-Quechua languages

Oddly enough, it is not known exactly what relationship obtained between the Quechua of the manuscript and the language in which Huarochirí religious life was conducted. Many dialectological and linguistic questions about the manuscript remain pending.

Even the origin of the Quechua dialect used in the text itself is less than obvious. Its general affiliation is clear: it is one of the many and far-flung kinds of Quechua grouped as Quechua A or Quechua II. At least one member of this group spread widely through Andean America long before the Incas, and the Incas promoted a Quechua II dialect (probably not identical to Cuzco Quechua) as their administrative tongue. Perhaps working from this precedent, the Spanish invaders styled a widespread Quechua II (or perhaps several overlapping Quechua II dialects) the “general language” (Cerrón-Palomino 1985: 552–553; Taylor 1985: 158–160). In ecclesiastical councils especially, Spaniards promoted it for colonial use through efforts such as standardizing orthography and providing norms for translation and nontranslation of religious concepts.

“General” Quechua functioned c. 1600 as a lingua franca shared by many linguistically diverse peoples including Spaniards, among them clergymen who used it to simplify missionary work in a dialect landscape already reverting to pre-Inca diversity. Colonial native chiefs and others who traded on relationships with the Spanish also relied on it. On the whole, this church-influenced “general” Quechua is the language of the manuscript. The person who actually did the writing appears to have learned the art of Quechua writing for ecclesiastical purposes. But precisely because it was a partly artificial lingua franca—many speakers’ second or third language and few if any speakers’ first language—specific examples of “general” Quechua would normally be affected by underlying patterns of local speech. Linguists disagree on whether the text’s peculiarities indicate an attempt to render speech similar to Cuzco Quechua (Urioste 1973: 4) or similar to the Quechua of modern Ayacucho (Hartmann 1981: 189). Mannheim (1991: 195) notes phonological reasons for questioning whether the

manuscript records any member of the group of south highland dialects to which both Cuzco and Ayacucho belong.

The question actually goes far beyond Quechua dialectology. There is room for doubt about whether any Quechua was the language of religious practice or of the original testimony. In Huarochirí the particular version of Quechua that functioned as a “general language” for such churchmen as Father Avila still, at the probable date of the manuscript, thinly overlay at least one non-Quechua Andean tongue. Twenty-two years before the manuscript, Diego Dávila Brizeño ([1586] 1965: 155) noted that the common folk did not all know Quechua. A 1577 Jesuit report tells us that missionaries needed to have Quechua sermons repeated in a local language “because the women there don’t know the general language” (Arguedas and Duviols 1966: 245). Almost two centuries after the Huarochirí manuscript, another visitor observed that local use of the “general language” sounded peculiar and “mixed” (Taylor 1983: 270, 273). It is therefore highly likely that the religious life of the generation Avila persecuted had been conducted at least partly in a language other than Quechua.

So the text probably stands at some distance from habitual and traditional usages in religious speech. We do not have any specific proof that the texts were translated from a local tongue into Quechua, but the possibility cannot be discarded. At a minimum it seems likely that processing of local discourse by a person fluent in “general” Quechua played a role in creating the text.

The following are languages that appear to influence and in some cases to underlie the Quechua text.

Quechua other than the “general” dialect

“Thomás” the scribe (or persons dictating to him) probably knew at least one dialect of Quechua other than the one the church promoted as “general.” It may have been influenced by an Aymara-like tongue (see below). It is also a possibility, though a difficult one to demonstrate, that local Quechua was influenced by a coastal speech proper to the Yunca people whom Huarochirí folk considered aboriginal; their language, too, may have been a Quechua different from the “general.” Finally, some usages in the Quechua of “Thomás” (e.g., *chacuas* ‘old lady’; chap. 21, sec. 261) are attested in Quechuas of the Quechua I or Quechua B group native to the central Peruvian highlands. Quechua I languages differ widely from the Quechua of the text, but other colonial examples of mutual influ-

ence are known. In some cases the writer has hesitated between words of the Quechua II or A group, as, for example, in the repeated crossings-out of *punchao* 'sun' and substitutions of another word for 'sun': *ynti*. The discrepancy may have to do with Inca versus non-Inca religious vocabulary.

Language(s) of the Jaqi (Aymara) family

The terms "Jaqi" and "Aru" denote a group of languages today represented most notably by Aymara, an important language spoken from the Lake Titicaca basin southward into Bolivia. Jaqi tongues share some lexicon with Quechua but are entirely separate languages. Although Quechuas have displaced Jaqi tongues from a large part of their formerly enormous range, certain Jaqi languages (Kawki and Jaqaru) were and to some degree still are spoken in two areas close to the Huarochirí terrain (Briggs 1985: 546). Both areas are in Yauyos Province, from which Huarochirí people were thought to have immigrated (chap. 23, sec. 297; chap. 24, secs. 305–309; chap. 31, secs. 391, 408, 443). Taylor has argued that some of the testimony may have been given in a Jaqi tongue, because Aymarisms are common in the ritual terminology (e.g., the names of the two greatest celebrations described, *Auquisna* and *Chaycasna*). He also notes that certain "Aymara-type" phonetic alternations (*ñamca/ñamoc*, etc.; Taylor 1985: 162) commonly occur in words connected with Huarochirí religion, suggesting Jaqi interference. These Jaqi-like phenomena offer the strongest clue for identifying the ethnic language of the myth-tellers. It is probable that at a minimum the text has been modified from a more Jaqi-influenced speech toward "general" Quechua.

Non-Quechua, non-Jaqi native lexicon?

A few common nouns and many names of persons and places do not seem to derive by any evident route from Quechua, Jaqi, or Spanish. There may be an additional influence from an unknown ethnic tongue, perhaps predating the supraethnic Jaqi and Quechua diffusions. Huallallo Caruíncho's name, the *hugi* monster he created, and the untranslated common nouns *calcallo* (chap. 31, secs. 413, 415) and *llaullaya* (chap. 21, sec. 271) may be examples. If so, the persistence of such words in both Quechua and Jaqi cultic vocabulary may eventually yield a clue to the antiquity of Huarochirí religious categories.

Spanish

Father Avila reported that most Huarochirí people knew at least some Spanish (Arguedas and Duviols 1966: 255). However, as Urioste notes, not all of the

many Spanish words that found their way into the manuscript are there for obvious reasons. Some words do lack Quechua equivalents and are therefore hardly surprising: *cauallo* 'horse', *yglecia* 'church'. Others overlap Quechua terms but "cover a different semantic space" (Urioste 1982: 106). For example, *animalcona* ('animals'; Spanish with a Quechua plural marker) combines categories of wild and domestic beasts that, in Quechua, are named with separate words. But a few do have close Quechua counterparts and are not used out of any obvious necessity: *doze año* 'twelve years' (in Quechua a plural numeral obviates the need for a pluralizing suffix on the head of the phrase, hence the singular form *año*), *gato montés* 'wildcat', and so forth, which have close and obvious Quechua equivalents. It is not known why the writer chose them.

Although the text was probably made as a tool for excising Andean belief from the religion of converts, it sometimes uses Christendom's lexicon to name Andean religious categories. All the seven occurrences of *saçerdote* and *saçerdotisa* (Spanish for 'priest'/'priestess'; chap. 13, secs. 178, 183; chap. 18, sec. 224; chap. 20, sec. 252; chap. 21, sec. 273; supp. I, secs. 462, 466) refer to priests of *huacas*. *Saçerdotisa* suggests an analogy from the Renaissance lore of Greco-Roman antiquity, but some usages are more markedly Christian: the preface (sec. 2) categorizes the regional belief system as a *fe* 'faith', implying that as a whole it is an entity comparable in scale and kind with the True Faith. Given the tellers' and writers' free use of specialized Andean religious terminology, they probably did not include these words for the convenience of Spanish readers. It is more likely that there already existed some habitual code of correspondences perhaps arising unconsciously from the habit of expressing Andean ideas in a fashion responsive to Christian hegemony.

Sometimes the influence of Spanish norms operates in a hidden fashion by affecting choice between Quechua words. This is especially notable in sexual lexicon, where the pro-Christian speaker substitutes shame-oriented and therefore Spanish-like phrases for plainspoken Quechua ones. For example, in chapter 10 (sec. 151), the word *ollonchicta* 'our cocks' has been crossed out in favor of *pinçayninchicta* 'our private parts' or, more literally, 'our shame'.

The problem of redaction

An editing process has given the manuscript a veneer of organizational unity. But no one has yet subjected it to text criticism detailed enough to uncover the "seams" where testimonies have been

stitched together or to determine how many voices enter in. For the time being, this can only be recognized as an unknown requiring future study. It appears likely that the myth-tellers and retellers are multiple, probably from a minimum of three different places. Whether a separate translator beside the scribe and/or editor intervened is unknown. We neither know whether the interviewer used a written questionnaire (a common Spanish practice) nor whether the edited text as we find it was organized by a native researcher, by the scribe Tomás himself, or by someone employing native informants (Avila?).

It is highly likely that chapters 1–31 are rewritten and edited text, because they are fair copy (standardized at thirty-six lines per page) already augmented with contextual material, especially at beginnings and ends of chapters (Urioste 1973: 7–10). These chapters, however, appear to be an intermediate draft because editorial work continues in the form of interlinear and marginal comments and corrections (some seemingly in Avila's hand). Supplements I and II differ in grammar from the body of the manuscript, are written in a less polished handwriting, and come after a word meaning 'the end'. They may be surviving fragments of less-processed testimony. Or they may be a set of rough notes prepared by the editor/redactor on the basis of personal knowledge, apart from the compiled testimonies.

The problem of validation

One property of the text that may yield clues about the editing process if closely studied is the problem of validation. Quechua, like many American languages, requires the speaker to attach suffixes that clarify his or her relationship to the data conveyed. When conveying data learned from personal experience, the speaker uses the witness validator *-mi* (alternatively *-m*, *-n*), which implies that the content of the sentence or (sometimes) larger speech unit is something learned through direct sense experience. When passing on data learned secondhand—for example, an account heard from somebody else—the speaker will switch to the reportive (sometimes called "hearsay") validator *-si* (alternatively *-s*). We suspect that predominant reportive validation may reflect the intervention of a *re-teller*, perhaps a translator; but when speaking of legendary events, original informants might well have used it, too. When speculating without evidence, or when uncertain, the speaker employs the conjectural validator *-cha*.

There are two types of passage in the manuscript in which witness validation predominates. One is the contextual remarks and interpolated comments that appear to be supplied by someone other than the myth-telling informants, probably the editor/redactor. Sentences with *-mi* often introduce or end a chapter, stating with witness validation the relation of a *huaca* or ritual to a narrative or geographic context. Witness validation is normal in chapter titles. The preface has predominant *-mi*. Also, at least one contributor often uses *-mi* witness validation to report apparently contemporary local circumstances, as opposed to mythic or ancient events. For example, a mythic place name will be identified with a modern landmark using *-mi*. Accusations that local people are secretly carrying on some of the rites that the myths explain carry *-mi*: for example, *ynatacmi musiasca tucoy ynantin llactacunapipas rurancu* 'those who are privy to these customs do the same in all the villages' (chap. 9, sec. 133). The other passages in which *-mi* witness validation predominates are the two supplements, which appear to be rough notes. Perhaps their witness validation is related to their focus on contemporary ceremonies (and not ancient rites or myths of the past), which the writer or informant might have seen. Or perhaps, if they are transcriptions of unprocessed testimony, the validation is the original informant's own.

In the remainder of the text (the great majority of it), which consists of mythic narratives and descriptions of rites and rules of the past, reportive *-si* validation predominates. It is the usual validation of narrative passages: *cay chaupi ñamca sutiocsi huc runa anchi cochapi apo tamta ñamca sutiocpac churin carcan* 'the one called Chaupi Ñamca was the daughter of a man in Anchi Cocha, a lord named Tamta Ñamca' (chap. 10, sec. 142). Because it contains *-si*, this sentence could be rephrased 'Chaupi Ñamca was, they say, the daughter of . . .'. Such locutions might be expected of any person telling a myth with a slight authorial distance. But *-si* could also come from a translator or reporter paraphrasing or repeating, without necessarily endorsing, an informant's words. A rendition using that assumption would be 'Chaupi Ñamca was, (s)he says, the daughter of . . .'. These rephrasings are overtranslations insofar as the original does not contain the verb 'say' or imply anything one way or the other about who does the saying.

The exceptions to predominant *-si* reportive validation in narrative passages occur mostly in dialogue, where the characters speak what is putatively their own experience, and also in utterances

that are not dialogue but performative speech (i.e., speech that actually changes the world rather than telling something about it): *camca vinaymi causanque tucoy hinantin sallcacunamanta huañuptinca huanacuctapas viconactapas yma ayca cactapas camllam micunque chaymanta camta pillapas huañoichi sonque chayca paipas huañuncatacmi ñispas ñircan* 'You'll live a long life. You alone will eat any dead animal from the wild mountain slopes, both guanacos and vicuñas, of any kind and in any number. And if anybody should kill you, he'll die himself, too' (chap. 2, sec. 19).

There are passages and even whole chapters (e.g., chap. 9) in which it appears that the editor/redactor validates substantive content (as opposed to expository asides) with *-mi*, as if telling what he had seen with his own eyes. These passages tend to be descriptions of ritual, typically set in explicitly colonial context. A good example is the explanation of how Chaupi Ñamca's ritual dances were scheduled into a purportedly Catholic calendar (chap. 10, secs. 148–151). The authorial voice claims witness knowledge of incriminating facts, but coyly slips into reportive where naked dancing is concerned.

There are also passages in which significant mythic material is witness-validated. The crucial passage in chapter 9 (secs. 112–116) where Paria Caca lays down the fundamental rule of his cult is one. This validation may relate to the convictions expressed in the preface, which credits the narrative tradition with evidential worth comparable to that of Spanish writing. It is difficult, however, finally to decide whether such validation indicates belief in the factuality of the Paria Caca myth (on a witness's part or on the editor/redactor's part?) or only signals that some passages, the parts in the editor/redactor's own words, contain a true rendering of a story that may or may not finally be true.

Validation presents frustrating problems for translation, because nothing in English has rhetorical force similar to it. Added phrases like 'It's a fact that' (*-mi*), 'It's said that' (*-si*), or 'It could be that' (*-cha*) do convey validators' informational function, but at such expense to narrative quality as to falsify the text (by making it sound hesitant and colorless) more than they clarify it. We have availed ourselves of the regularities already noted in order to establish norms that minimize encumbrances on the text, while also alerting readers to each significant validation shift. (Some particulars of validation completely escape translation or are difficult to interpret, such as the many instances of a witness-validated discourse marker introducing a reportively validated sentence.) The redactor/editor's

stage-managing contributions routinely have witness validation, so the reader may assume its presence in sentences that are obviously editorial, even if they lack explicitly translated validation, unless an overtranslated phrase such as 'it's said that', 'they say', or 'reportedly' suggests otherwise. Such passages occur at the beginnings and ends of chapters. Mid-chapter editorial asides such as 'we told this story in the fifth chapter' (chap. 10, sec. 142) also routinely carry witness validation. In the chapter titles, too, readers should assume *-mi* witness validation. At mid-chapter validation shifts, notes signal how far the new validation extends. The two supplements are exceptions to these rules. In them the reader can assume witness validation throughout unless reportive validation is explicitly indicated.

Following such curtain-raising editorial formulas as 'the story goes like this' validation regularly shifts to reportive. 'In ancient times' and similar formulas also herald reportive passages. Generally, in the narrative passages of chapters 1–31, except in direct quotations, *-si* reportive validation may be assumed unless a phrase such as 'it's a fact that', 'in fact', or 'as we know' suggests otherwise. In direct quotations and performative utterances within the narratives, *-mi* can normally be assumed and is not specially marked. Readers interested in explicitly translated validation should look at Taylor's 1987b Spanish version, which translates validation more fully than we do (though still less than universally).

Translation of style

Validation is not the only respect in which the manuscript varies somewhat in tone and "feel" from passage to passage. Despite the likelihood that coerced elicitation, editing, and translation (or at least "correction" away from a local dialect of Quechua) put us at considerable distance from the myths' oral embodiment, and despite the probability that some of the testimony's oral qualities have been blurred as a result, nonetheless there do seem to be identifiable variations of oral-derived styles within the manuscript. We have tried to suggest them in the translation, giving the more bookish and editorial sentences a slightly different sound from utterances that probably replicate storytelling, ritual speech, and maybe even verse or song.

Framing sentences

An editorial voice intervenes particularly at the beginnings and ends of chapters as a stage manager of

testimonies: 'we have already told', 'now we shall tell', and so forth. In the translation we have sought to make this "framing" verbiage easily recognizable by its semiformal and faintly pompous diction. Perhaps the person who composed the framing sentences is the same one who occasionally obtrudes with politically opportune comments:

... no matter how people behave, neither the *alcalde* nor anybody else would ever try to stop them by asking, "Why do you do these things?"

On the contrary, they dance and drink right along with them until they get drunk. And as for the Catholic priest, they fool him, saying, "Padre, I'm back from cleaning the canal, so I'm going to dance, I'm going to drink."

As far as that goes, all the people do the same thing.

True, some don't do it anymore because they have a good padre.

But others go on living like this in secret up to the present. (chap. 7, sec. 95)

One possible source of such language is Cristóbal Choque Casa, Avila's political ally, who glorifies his own struggle against the *huacas* in chapters 20 and 21. The same voice or pen may well be the source of the many passages that tell about non-Christian rites surviving clandestinely at the time of writing.

Narrative passages

The bulk of the chapters consists of myths and descriptions of past ritual practice. Often the "framer" alerts us to the shift to mythic discourse and the recalling of past practices with a formula such as *chay simire caymi* 'that story goes like this'. On the whole what follows is vivid and powerful narration, with *-si* reportive or "hearsay" validation predominating.

It is hardly accidental that translators differ on how "oral" or how "bookish" the manuscript is. Adelaar called his Dutch translation (1988) *Het boek van Huarochirí*. Our introduction also emphasizes the likelihood that its redaction was influenced by a European concept of the book and that the redactor thought of myth as material for the making of history books. On the other hand, Urioste gave his 1983 Spanish version a subtitle meaning 'The oral tradition of Huarochirí', and Taylor says that the manuscript "preserves the spontaneous composition of its oral informants" (1987b: 9). Arguedas, sensitive to both qualities, described it as "the voice of antiquity transmitted . . . through the mouths of common people," yet also called it "a little regional bible" (Arguedas and Duviols 1966: 9–10).

Taken separately, both the oral and the bookish emphases can easily turn into distortions that obscure the text's peculiar qualities. We see the intersection of orality and literacy as essential. Rather than filtering out bookish traits the better to approximate oral sources, we seek to capture a form of literacy in the act of engulfing one or more oral genres. This approach has the advantage of faithfulness to the manuscript's historic function. But it entails technical problems.

Something would be lost by simply leaving the translated text in solid blocks of page-filling prose like those of the scribal page. It would be a sacrifice of authenticity not to make at least some use of Dennis Tedlock's ([1971] 1983) and Dell Hymes' ([1977] 1981) demonstrations of how internal evidence helps the translator restore qualities of spoken performance to transcriptions that bury performance rules in prose conventions, because some qualities of oral genre do shine through the editorial veils.

It might even be feasible to produce a fully ethnopoetic rendering of at least some Huarochirí texts (that is, one whose goal is to restore oral organization, with versification, by detecting written correlates of pauses, turns, etc.). We have not followed this method entirely, because, for reasons already mentioned, we doubt our ability to create a hypothetical likeness of the performances from which the manuscript was compiled (or, more likely, recompiled from earlier notes). Also, to make explicit the features that warrant line and stanza breaks (etc.) requires putting into the English text many particles that impede fluent reading of narrative content. Finally, it may be that some of the pauses marked with *chaymanta* 'and next' and the like do not reflect local norms of oral performance but rather are effects of making the speaker (translator?) wait for the scribe to catch up.

Though inhibited by these caveats, we have sought to indicate, partially and tentatively, some performance qualities of the Huarochirí material detectable within the bookish frame that is also part of its substance. Like most Native American narrative texts, the Huarochirí manuscript is spotted with innumerable "empty" words or discourse markers, especially at the beginnings of sentences, that add no literal content to the flow of action. Common ones include, for example, *chaymanta* 'and next' or 'after that', *chaysi* 'so' (with reportive validation), and *chaymi* 'so' (with witness validation). Translating these words directly gives an effect the very opposite of oral. It makes the text sound hesitant and finicky, disrupted. But they are,

of course, not “empty” in spoken performance; they serve to separate utterances in a patterned way, imparting a quality of measure and helping the listener keep pace. We believe they served this function in the oral performances that the manuscript partly mimics and have tried to convey as much. Some words that we read this way are sentence-initial *cay* ‘this’/ *chay* ‘that’; *ychaca* ‘however’; *yna*, *ynaspa*, and other derivatives of *yna* ‘thus’; *ña* and *ñatac* ‘already’, ‘then’, ‘so’, ‘again’; *huc* . . . *huc* and *huaquin* . . . *huaquin* ‘some . . . others’. Certain other touches, such as emphasized changes of topic or words indicating change of time or setting, also are taken as signaling a new “turn.” Many sentences begin with clauses whose informational contribution is minimal (*chay yna captinsi* ‘while it was like that’) but which similarly seem to serve a function of measure or pace, introducing a new burst of the storyteller’s speech.

Our objective is a compromise, an attempt to make a likeness of the manuscript that suggests its “feel” as a manuscript: that is, a prose presentation following norms of book organization, which for long stretches subsumes oral performances without strictly transcribing them. Stopping short of an attempt to reconstruct the oral performances that the writers heard, but also stopping short of an undivided prose that would silence their clearly audible echo, we have chosen to render the above-mentioned discourse markers and other devices of measure into prose divisions that somewhat suggest the quality of turn or strophe, namely, short indented paragraphs. (The section numbers alongside them are only meant as aids to correlating with the transcription.)

Another “oral” characteristic of the Huarochiri manuscript is heavy reliance on direct quotation and dialogue. Quechua *ñispa* . . . *ñin* ‘saying . . . (s)he said’ delimits quotations, but instead of translating the formula we have simply used ‘said’ and quotation marks (unlike Taylor 1987b, who often favors indirect quotation). Because the Quechua verb *ñiy* can mean ‘to think’ or ‘to intend’ as well as ‘to say’, some direct quotations are rendered as quotations of thought: *ñocaracpas ñaupac uman-man chayaiman ñispa* ‘thinking, “I mean to get to the summit first!”’ (chap. 9, sec. 120).

In order to clarify the dialogue structure of many passages, we have placed each turn of quoted speech in a separate indented paragraph, even when the original quotes more than one speaker within a single sentence. Most Huarochiri dialogue (and narration) sounds lifelike and colloquial, and to convey this quality we freely use English contractions (‘isn’t’,

etc.). In some cases, a quotation contains several sentences that sound like simultaneous comments on the same point, and in these cases we have interpreted the effect as a chorus of comments:

Then they derided Quita Pariasca with spiteful words:
“That smelly mountain man, what could he know?”

“Our father Paria Caca has subjects as far away as the limits of the land called Chinchay Suyu. Could such a power ever fall desolate?”

“What does a guy like that know?” (chap. 18, sec. 223)

Question marks in the translation securely reflect Quechua grammar, but exclamation points are supplied. Parentheses are also supplied.

Versified speech in semantic couplets

A few passages clearly employ the Andean oral device called “semantic coupling” or “thought rhyme” (Mannheim 1985), and we have rendered them as couplets. They appear inset in the translation. The semantic couplet is a pair of sentences that express closely related ideas phrased in related (sometimes syntactically parallel) fashion. Semantic coupling is common in modern Andean folk poetry and song, as in many of the world’s oral traditions. Huarochiri examples include:

We go in Tutay Quiri’s steps,
We go in the path of his power. (chap. 11, sec. 158)

Tell me, I beg: what have I done to make them ill?
For what fault of mine do I live in suffering? (chap. 13, sec. 179)

Semantic coupling typically occurs in invocations to, or sayings of, sacred beings—*huacas* themselves, legendary ancestors, priests and oracles delivering responses, or Christian deities. Cristóbal Choque Casa’s moving prayer to the Virgin Mary (chap. 20, secs. 254–255) consists largely of couplets. It might be an example of those “devout and elegant” religious songs that Jesuits in Huarochiri heard “idolatry” defendants sing in their cells at night c. 1620 (Arguedas and Duviols 1966: 259–260). Much earlier witnesses, the Jesuits who conducted the path-breaking mission of 1571, found out that such songs were reworkings of prehispanic hymns: “The same [hymns of praise] which in former times they used to give to the sun and to their king, they have converted into praise of Jesus Christ by taking material from what they heard preached” (Arguedas and Duviols 1966: 243). Some couplets are brief ritual

formulas rather than hymns and a few might be humbler bits of folk song or familiar sayings.

Margot Beyersdorff (1986: 219) comments that in the Huarochirí manuscript "intercalated fragments of sacred verse . . . follow the same norms of versification as the 'prayers' of [Cristóbal de] Molina ["cuzqueño"] and [Felipe Guaman] Puma de Ayala, and can be included in the genre *wayllina*." She does not identify the fragments. Beyersdorff infers from Molina that *wayllina* denominated a specific verse form unique to sacred speech. Husson (1985: 330–331), on the contrary, emphasizes Guaman Poma's couplets' affinities to popular and profane song.

Other translation conventions

In addition to translation problems arising from idiosyncrasies of the Huarochirí text, the translation reflects some decisions that face anyone working from Quechua. Readers who want to avoid spurious accuracy in using the translation should take note of them.

This book does not aspire to morpheme-by-morpheme translation, for several reasons. Rendering an agglutinative language morpheme-by-morpheme (to the degree that it is possible at all) yields verbose, obscure formulations. The following example of a translation process uses the slash (/) to signal morpheme boundaries and suggests the sort of problems that occur within a single random and typical clause. The original is *ña chori/n/cuna/pas collo/pti/n/rac/si* . . . Analyzed using Urioste's (1973) terminology, this clause consists of three roots (italicized), each with additional morphemes: *already child* / (3d person) / (plural) / (additive) *perish* / (contrastive adverbial) / (third person) / (continuative) / (reportive validator) . . . This could be rendered, forcing a morpheme-by-morpheme translation, as: *already child* / his / (plural) / even *perish* / (verb with different subject to follow) / they / first / it's said . . . To make intelligible English one must drop a morpheme (-*pti*) that has and needs no English analogue and make choices whether to translate -*pas*, -*raq*, and -*si* explicitly. We chose not to translate most -*si* reportive validators, and the remaining content can be made clear by implication in a simple English form: 'When his children had already perished . . . ' (chap. 19, sec. 233; the referent of 'his' is supplied in the body of the translation).

Our translation generally preserves sentence boundaries, but in some cases the original sentences contain chains of subordinate clauses so long that a single-sentence translation (without Quechua's devices for clarifying switches of sub-

ject) comes out congested. In these cases sentences have been divided. Sometimes the order of clauses has been altered. The order of sentences has not been altered. Where sentence boundaries are significantly uncertain, notes indicate the alternate readings. Where the grammatical subject of a sentence is unstated but unambiguous in the original, an explicit subject has been supplied in English. In cases of ambiguity, we tried for English translations with a similar ambiguity. Where this was not achieved, notes indicate the nature of the ambiguity.

Aside from unique cases, there are generally common sources of ambiguity (as the English reader sees it) in regard to gender, number, and time. Quechua does not have grammatical male-female gender and in some cases the sex of a named person is unclear (for example, the master weaver mentioned in chap. 1, sec. 8). Also, because singular forms may be used to mean plural, Quechua nouns are sometimes indefinite as to singular and plural. Finally, the tense in Quechua that most resembles English present sometimes refers to a (usually recent) past, making certain sentences ambiguous as to whether they describe current reality. Such cases are noted where they cause significant doubt about the meaning of a passage.

A given root, especially a verb root, is not always translated by the same English word because the root with its varied suffixes often gives a net sense that varies from the root sense by a distance that only a different English word can render. In the following example the common verb root *yalli*- ('to exceed, surpass') yields English 'to compete' when coupled with the suffix -*naco*- (denoting reciprocal action) but English 'to win' when not modified: *po-macta aparispa yallinacoson* 'Let's compete in putting on puma skins' (chap. 5, sec. 64); *pomancu-nacta aparispa yallita munarcan* '[he] wanted to win by wearing the puma skins he had' (chap. 5, sec. 64). However, in passages where repetition appears to be an element of rhetoric or measure, as, for example, with the four-times repeated *canan-cama* 'until now' in the preface, the translation mimics the repetition.

The numbers given in the margin are added by the translators. Numbered sections are there only to help readers compare the original and the transcription and to facilitate index references and cross-references. They do not define a unit intrinsic to the method of composition.

The translation does not show the small pen strokes and marks (symbols?) scattered in the original manuscript. The punctuation is added. In addition to sentence-, quotation-, and clause-delimiting punctuation, we have added:

() Parentheses to signal apparently parenthetical remarks in the original text.

(This spring flowed from a large mountain that rises above San Lorenzo village.

This mountain is called Suna Caca today.)

At that time, they say, it was just a big lake. (chap. 6, sec. 81)

[] Square brackets to signal marginal or crossed-out material on manuscript pages.

< > Angle brackets to identify translators' words referring to marginal or crossed-out material.

<margin, in Quechua:> [Paria Caca crossed over to the village of the Cupara.] (chap. 6, sec. 80)

We have translated crossed-out material (words or phrases) that adds substantively to the text, but not crossings-out that only change a spelling or crossed-out single morphemes or letters. All these details are reproduced in Taylor's (1987b) study edition.

Note conventions

Unless otherwise noted, English versions of quotes from non-English sources in notes and in this introduction are by Salomon. Sources cited in notes appear in the general bibliography. Notes provide context sufficient only for novice readers and do not contain full comparisons with other translations or exhaustive references to literature.

Transcription conventions

The transcription strives for the nearest simulation of the original page's qualities compatible with easy comparison to the translation.

The page breaks, signaled with *foja* or folio notations *R* for recto and *V* for verso, are those of the original.

In the transcription the following conventions are used:

Uppercase letters stand for large letters in the original. The original does not use uppercase (rare in scribal papers) but does use large lowercase letters in headings.

[] Square brackets contain the section numbers for keying passages to corresponding parts of the translation.

< > Angle brackets identify crossed-out material in the original.

() Parentheses identify the expansion of abbreviations. For example, the original's *capio* is rendered *capit(tul)o*.

Toponymic and onomastic spelling conventions

It is important to note that in the translation (not the transcription) we have standardized the names of persons, places, and *huacas* so that each has (as nearly as possible) only one name in English context, regardless of the often considerable variations in the original. (Exceptions are cross-referenced in the index.) When the original spelling varies, it is standardized in the translation according to the following rules:

- First: If a proper noun appears only once in the manuscript, or if all occurrences are spelled the same way, we have retained the original spelling.
- Second: If a proper noun has multiple spellings in the manuscript, we have chosen one of these and maintained it throughout the translation and index. The criteria for choosing the form are:
1. For words ending alternately in *o* or *u*, we selected the *u* ending.
 2. Wherever *i*, *e*, and *y* vary, *i* was selected.
 3. Wherever *s*, *ss*, *x*, and *ç* vary, *s* was preferred. The manuscript's apparent sound system does not preclude reading *x* as a palatalized fricative different from *s*, nor does it conclusively prove this to be correct.
 4. Wherever *n* and *m* alternate in final position, *n* was selected.
 5. Wherever *ai* and *ay* alternate, *ay* was selected.
 6. Wherever *hua*, *gua*, and *ua* alternate, *hua* was selected.
 7. Wherever *quia* and *quio* alternate with *cya* and *cyo*, the latter spellings were selected.

Some place names as standardized are different from their nearest modern equivalents (identified in notes at the toponym's first occurrence). For example, the modern place is written *Huarochirí* but the manuscript uses *guaro cheri* and *huaro cheri*. We use the latter in the translation. Such standardizations from the text, not modern toponyms, appear on the map.

In Spanish names (Thomás, Luzía, etc.) we have

conserved the manuscript's spelling and added the acute accents corresponding to their modern forms.

A caution: standardizing is intended to minimize the novice reader's problem in keeping track of the *dramatis personae* and to make the index simpler. But it sacrifices data important to the analysis of the original text's sound system, to its dialectology, and to source criticism. Students who need such data are urged to use the transcription.

In the transcription and translation, we have followed a common Quechua structure of proper names by treating them as two-word phrases (Paria Caca, Huatya Curi, etc.). Large onomastic corpuses such as the 1588 *revisita* of Sisicaya clearly show that Huarochirí names are binomial, whether or not a space separates the elements (Archivo General de la Nación, Buenos Aires, ms. 13-17-5-1). Applying this norm involves some interpretation because word boundaries in the original are sometimes inconsistent or unclear. By normal Quechua syntax rules, the first word would express an attribute applying to the second; some names can be interpreted using this rule (e.g., Sullca Yllapa 'Last-born Lightning'; chap. 8, sec. 108; chap. 16, sec. 202). Indeed, Huarochirí onomastics remains problematic in general; uncertainty about whether all the names are binomial is only one of many ob-

stacles preventing general translation of proper nouns. A few name meanings are nonetheless clear enough and important enough to warrant bringing them into the translation (e.g., Pacha Camac Pacha Cuyuchic 'World Maker and World Shaker').

Index and glossary

The index gives numbered section (not page) references to both proper nouns and topics and themes, classifying many specific items under rubrics common to anthropology (e.g., for material on sibling relationships, look under "kinship"; for the symbolic value of red, see "color"). The references are to the translation, not to the Quechua original. An instance of a proper name supplied in the translation will be indexed even if only a pronoun or an unambiguous implied reference is present in the original. Personal names are alphabetized according to the first term of the native name. For example, *Diego Chauca Huaman* is alphabetized under *Chauca*. The glossary of untranslated words lists all the terms that appear italicized in the translation, giving simple glosses and numbered section references to all their occurrences. Material in notes is not indexed.

[Preface]¹

If the ancestors of the people called Indians² had known writing³ in earlier times,⁴ then the lives they lived would not have faded from view⁵ until now.⁶

As the mighty past of the Spanish Vira Cochass⁷ is visible⁸ until now, so, too, would theirs be.

But since things are as they are, and since nothing has been written until now,

1. The whole preface has witness validation, suggesting that it expresses the native editor/redactor's own convictions. Quechua grammatical validation is discussed in the introduction, in the section on the character of the present translation (see especially the section on the problem of validation). The opening lines have a sharp rhetorical structure. They start with a matched pair of contrafactual sentences (-*man* . . . -*man*), continue with a matched comparison (*hina* . . . *hina*), and link the two pairs by a pointed contrast between their respective conclusions (. . . *manam* . . . *hinacho canman*/ . . . *hinatacni canman*, which might be rendered 'it wouldn't be so/ . . . it would be exactly so').

2. *runa yn(di) o ñiscap* 'of the people called Indians': suggests a shade of authorial distance from the term "Indian," perhaps because it lumps together the many distinct peoples whose differences and relations form the axis of the text. The phrase recurs at the very end of the text (supp. II, sec. 485).

3. *quillcacta* 'writing': more literally, 'writer(s)'; derives from a verb whose prehispanic sense appears to have been 'to paint' or 'to ornament' (González Holguín [1608] 1952: 301).

4. *ñaupa pacha* 'earlier [or former] times': although other translators give 'ancient', this passage could also refer to an earlier moment of the colonial era.

5. *chincaycuc hinacho canman* 'would not have faded from view': more literally, 'would not be like something getting lost'; that is, if Andean tradition partook more of literacy, colonial conditions would not have led to its recent erosion.

6. The four repetitions of *canancama* 'until now' give a feeling of arrested motion, released at last in the final

2 I set forth here the lives of the ancestors of the Huaro Cheri people, who all descend from one forefather:⁹

sentence of section 2. Similarly, the sentence verbs of section 1 form a series of three contrafactuals (with conditional suffix -*man*) that yields in section 2 to three finite verbs, in past, present, and future tenses, respectively. The tone shifts from speculation toward concreteness and dynamism. One feels the engines of narration gripping, moving forward.

7. The original contains only *vira cochappas* 'the Vira Cochass', a colonial and modern Quechua usage that employs the name of a principal deity (salient in chapters 2 and 14) to refer to the Spanish. The Spanish erupt onto the Andean scene under this name in chapter 18 (sec. 223). Modern Cuzco Quechua still uses the expression. We have supplied 'the Spanish' to avoid confusion between the deity and the nationality.

8. The verb *ricurin* 'be visible' seemingly emphasizes the *visibility* of the new Spanish mnemotechnology, writing, as opposed to the *audibility* of the endangered oral tradition.

9. *huc yayayuc . . . machoncunap* 'ancestors . . . from one forefather': more literally, 'of the old ones . . . possessors of one father'. The manuscript repeatedly expresses diachrony in terms of patrilineal ancestry. The point in this passage is that, despite their diversity, the social units that are protagonists of the following chapters unite at the apex in a single male progenitor, namely, Paria Caca.

What faith¹⁰ they held,¹¹ how they live up until now,¹² those things and more;

10. *yma ffeenioccha* 'what faith' uses a Spanish term, *fe* 'faith', to denominate non-Christian religious practice. In Christian context this categorizes the *huaca* cults as members of the same class of phenomena as the "true" faith (and therefore subject to graver penalty than mere "superstition"). Quechua had no term similar to *fe*. But the suffix *-yoc*, usually translated 'possessor of', is usually used in the manuscript to signify a non-Christian worshiper's bond to the *huaca*. It signifies not so much belief as a social connection in which the worshiper owes service and the deity protection.

11. The original *ffeenioccha* has a conjectural validator *-cha*: overliterally, 'what faith they may have held'. One common usage of *-cha* is to convey the degree of doubt appropriate to guesses about what is in another person's mind (secs. 133, 247, 279). Here *-cha* suggests that the author regards knowledge of the ancient religion (based on the reportively validated data that make up

Village by village it will be written down:¹³ how they lived from their dawning age onward.

most of the manuscript) as a conjectural construct, in effect an ethnographically derived model intended to explain "idolatrous" practices of the present.

12. In addition to the reconstructed faith of the past, the maker of the manuscript will also set down ethnographic observations on current mores. Most of this material appears with witness validation in subsequent parts.

13. In fact, the manuscript does not proceed village by village. It expresses primarily the viewpoint of one group, the Checa of San Damián village, and secondarily those of perhaps three other groups (the inhabitants of Mama in chap. 13, the Allauca in chap. 30, and the Concha of Concha Sica in chap. 31) filtered through some Checa interference. In spatial terms its mythology centers on the Checa ceremonial center, Llacsá Tambo, near the colonial village of San Damián.

CHAPTER I

3

How the Idols of Old Were, and How They Warred among Themselves, and How the Natives Existed at That Time¹⁴

In very ancient times,¹⁵ there were *huacas*¹⁶ named Yana Namca and Tuta Namca.¹⁷

Later on another *huaca* named Huallallo Caruinchu defeated them.

After he defeated them, he ordered the people to bear two children and no more.¹⁸

He would eat one of them himself.

14. Like all of the first six chapters, this one bears a Spanish title in the original: *Como fue antegualmente los ydolos y como guerreo entre ellos y como auia en aquel tiempo los naturales*. In the original the Spanish titles appear to be insertions *ex post facto*. Their awkwardness often derives from specific Quechua interferences: for example (in this case), discrepancies between Quechua and Spanish rules about pluralization and number agreement (*fue . . . los ydolos*, etc.). Quechua's trivocalic sound system influences *antegualmente* via hypercorrection. The composer of the titles has also chosen an unidiomatic translation for *tiay* 'to dwell, to exist'. Such facts make it more than likely that Spanish was not his or her first language.

15. This formula regularly introduces a passage with reportive validation.

16. As detailed in the introduction, *huaca* is a broad term designating all physical objects taken to embody superhuman and sacred persons. Many mountains, springs, river junctions, mummies, and manmade objects as well were *huaca*.

17. The untranslated term *Namca* seems to designate a class of *huacas* associated with coastal peoples and the remote past. It also appears as a component of names of persons favored by *huacas*. In Quechua *Yana* means 'black' and *Tuta* 'night', so these might well be the powers extant before the present, solar world began.

18. *yscayllacta huachacunampac camarcan* could also mean 'he ordered people to give birth only by twos'. But when Francisco de Avila, who presumably knew the context, composed his *Tratado* using the same or a similar source, he chose this meaning ([1608] 1966: 200).

The parents would raise the other, whichever one was loved best.¹⁹

4 Although people did die in those times, they came back to life on the fifth day exactly.²⁰

And as for their foodstuffs, they ripened exactly five days after being planted.

These villages and all the others like them were full of Yunca.²¹

<margin, in Quechua:> [full of Yunca]

5 When a great number of people had filled the land, they lived really miserably,²² scratching and

19. *huctas mayquintapas cuyascanta* 'whichever one was loved best' is ambiguous as to whether it means the one that the parents loved best or that Huallallo Caruinchu loved best (because the -n third person possessive marker on *cuyascan* could refer either to the parents or to Huallallo).

20. Chapter 27 elaborates on this.

21. *yunca*, a common term in the manuscript, has a triple sense. It refers to the warm valley regions of the Pacific littoral; to the ecology, landscape, and biota typical of such regions; and (capitalized in translation) to the peoples who dwelled there. The Checa and other highlanders thought of Yunca people as aboriginal, in opposition to the invading peoples with whom at least some of the narrators identified.

22. The motif of an overfertile ancient humanity in Malthusian crisis reappears in chapter 27; it is analyzed by Fernando Fuenzalida (1979). The idea seems to be that by excessive human sacrifice to Huallallo they won excessive vitality. The argument implies that immortality is incompatible with human life: even if fertility were curbed to the extreme of allowing each immortal couple only one live (immortal) child, an overpopulation fatal to well-being would eventually ensue. Death is indispensable.

digging the rock faces and ledges to make terraced fields.

These fields, some small, others large, are still visible today on all the rocky heights.

And all the birds of that age were perfectly beautiful, parrots and toucans²³ all yellow and red.

- 6 Later, at the time when another *huaca* named Paria Caca²⁴ appeared, these beings and all their works were cast out to the hot Anti lands²⁵ by Paria Caca's actions.

23. *caquipas*: 'toucan' is a guesswork translation. Although the color suggests 'macaw', other references (chap. 9, sec. 131; chap. 24, secs. 331, 333) show that different words refer to macaws. Chapter 16 (sec. 207) says *caqui* is a parrotlike bird. Taylor (1987b: 47) points out an Ayacucho usage of *caqui* meaning a large parrot and an Aymara reference saying that *caqui* has long red, blue, and yellow feathers. Mejía Xesspe (Szemiński 1989: 6) chose *periquito* 'parakeet'.

24. This is the first mention of the dominant deity in the manuscript. Paria Caca is surely a sacred mountain, but which one? Bonavia et al. (1984: 5–7) offer a detailed identification: "Pariacaca Mountain has a distinctive shape, two twin snowcapped peaks with a saddle-shaped depression separating them. The low point between them is 75° 59' 24" longitude west and 11° 59' 20" latitude south (Department of Junín, Province of Jauja, District of Canchayllo, Peru)." Bonavia and his co-authors point out that because Paria Caca was close to the royal road from Lima to Cuzco, it was well known by sixteenth-century authors, including Dávila Brizeño (who drew it as a twin peak on his map; Rostworowski 1988: unpaginated insert) and Avila. Avila's own 1611 description of Paria Caca (Arguedas and Duviols 1966: 257) is compatible with Bonavia's identification. Modern villagers in Huarochirí readily identify a twin-peaked snowcap on the eastern horizon as Paria Caca.

The literal sense of Paria Caca's name is unclear. *Caca* means 'cliff' or 'crag' in ancient and modern Quechua. Arriaga's *The Extirpation of Idolatry in Perú* ([1621] 1968: 45; Keating's translation) suggests that Paria might be 'vermillion': "*Paria* are powders of a vermillion color, brought from the mines of Huancavelica and made from the metal from which mercury is derived, though its appearance is more like that of lead oxide."

Several common modern verbs with the root *pariy* express the idea of heat radiating from a solid object; there may be a connection with chapter 8 (sec. 103), where Paria Caca creates his shrine by quenching a huge fire.

But Urioste's suggestion (personal communication) that *Paria* is cognate to modern Cochabamba Quechua *pari* meaning 'split' (as in, for example, a harelip) is also tempting because of the mountain's cleft appearance.

25. *antiman*: more literally, 'toward the Anti'. The Incas termed the eastern slopes of the Andes and the

Further on we'll speak of Paria Caca's emergence and of his victories.

- 7 Also, as we know,²⁶ there was another *huaca* named Cuni Raya.²⁷

Regarding him, we're not sure whether he existed before Paria Caca or maybe after him.

<margin, in Spanish:> [Find out whether he²⁸ says that it isn't known if he was before or after Caruinchu or Paria Caca.]

However, Cuni Raya's essential nature²⁹ almost

western fringes of Amazonia *Anti Suyu*. *Andes* in Spanish usage c. 1600 usually meant the same region. These lands stand in most Andean mythology for savagery and the precultural life, a setting in which Huallallo might have been thought to belong. But it may also be that the Huarochirí narrators used *anti* in a more general way to mean warm lowlands, including the seaward valleys of the west Andean slope. When Francisco de Avila paraphrased a source similar or perhaps identical to this one, he said that the natives call hot lands "*yunca* or *andes*" and wrote of evil aborigines in "these Andes" (*estos andes*) whom Paria Caca expelled to "other Andes" (*otros andes*; *Tratado* [1608] 1966: 200; see also 216). The two *andes* areas are perhaps the Pacific lowlands and Amazonia, respectively. Because the term may be generic (a type of land) and not toponymic, we have avoided glossing *anti* as 'Amazonia'.

26. 'As we know' added to indicate witness validation, which continues to the end of the chapter.

27. The predominantly coastal *huaca* Cuni Raya has been identified as a water deity, creator of irrigation (Rostworowski 1977). The Incas thought the ability to create rivers and springs was the unique sign of his power (Betanzos [1551] 1987: 264). Chapters 2, 14, and 31 (secs. 409ff.) belong to Cuni Raya's mythology.

28. The marginal note is ambiguous in original. The subject of 'says' could be 'he' or 'she' or 'it' (i.e., a manuscript).

29. *cascanracmi* . . . *cascanman* 'his essential nature . . . Vira Cocha's': *cascan* is a past participial form of the Quechua verb meaning 'to be' and might more literally be rendered 'what he was'. For this reason we have used 'essential', also derived from a verb meaning 'to be'. *Cascan* is, however, less abstract in tone than 'essence'; hence 'nature'. Taylor's renders *cascan* as 'his cult' (*su culto*; 1987b: 28, 51), taking the point to be 'what he was in human practice'. But there are reasons for thinking *cascan* refers to 'what he was in himself'. In both colonial and modern Quechua this form often implies action previous to the speaker's cognition and/or surprise at discovering it (Cusihuamán 1976: 170–171; Urioste 1973: 96). We might read *cascan* as 'what he was all along (without our knowing it)'. This motif emerges more clearly in chapter 14 (sec. 190 and note 374), where Vira Cocha inveigles the Inca by promising to reveal *ñoca cas-cayta*, 'my *casca*'—'what I was all along'.

matches Vira Cocha's.³⁰ For when people worshiped this *huaca*, they would invoke him, saying,

"Cuni Raya Vira Cocha,

You who animate mankind,
Who charge the world with being,³¹

30. Because of his alleged importance as a supreme deity, comparable to the Christian God, Vira Cocha has become the subject of a large and frequently misleading literature. Many Andean sources about him are handily compiled in *Wiracocha y Ayar* (Urbano 1981: 1–31).

Here, however, this deity's role has little to do with the Christian concept of God and a lot in common with the pan-New World concept of a Trickster, whose buffoonery is at the same time a force making and remaking the world. In suggesting that Cuni Raya's nature "almost matches" Vira Cocha's, the teller seems to be taking note of a popular tendency, exemplified by the invocation that follows, to equate a Trickster-like deity associated with the hydraulic transformation of landforms (Cuni Raya) with a south highland, Inca-promoted deity (Vira Cocha). Chapter 14 emphasizes the latter component.

Szemiński and Mejía Xesspe before him have suggested that *cunirayap cascanracmi ñahca viracochap cascanman tincon* might mean the two deities' existences 'almost coincide' chronologically rather than qualitatively. This makes sense if one reads the statement as a reply to the chronological question just raised, rather than a comment on what follows. If one takes *viracocha* in this passage to refer to the Spanish, still other readings result (Szemiński 1989: 8–9).

31. *runa camac pacha camac* 'who animate mankind, who charge the world with being': the two lofty epithets

All things are yours!
Yours the fields and yours the people."

8 And so, long ago, when beginning anything difficult, the ancients, even though they couldn't see Vira Cocha, used to throw coca leaves to the ground,³² talk to him, and worship him before all others, saying,

"Help me remember how,
Help me work it out,
Cuni Raya Vira Cocha!"

And the master weaver³³ would worship and call on him whenever it was hard for him³⁴ to weave.

For that reason, we'll write first about this *huaca* and about his life, and later on³⁵ about Paria Caca.

employ the key verb *camay*, discussed in the introduction under "Into the world of the *huacas*." *Camay* has no clear equivalent in Spanish or English and is translated in the present work as 'to charge' or 'charge with being', 'to make', 'to give form and force', or 'to animate'.

32. That is, to sacrifice or perhaps to take an augury.

33. *compi camayuc* 'master weaver': both *compi* 'luxury-grade textile' and *camayuc* 'specialist' are Inca-style bureaucratic terms. *Camayuc* means more literally 'possessor of a specific force or energy [*camay*]', in this case the specific virtue of weaving.

34. Or 'for her'.

35. The manuscript contains cross-references that refer backward to earlier chapters by number, but the forward-pointing cross-references only use vague terms like 'later'. This suggests that the text, while it may be a fair copy, has not undergone a final editing.

CHAPTER 2

How Cuni Raya Vira Cocha Acted in His Own Age. The Life of Cuni Raya Vira Cocha.³⁶ How Caui Llaca Gave Birth to His Child, and What Followed

9

<margin, crossed out, in Spanish:> [Note that it isn't known whether this was before or after Caruincho.]

A long, long time ago,³⁷ Cuni Raya Vira Cocha used to go around posing as a miserably poor and friendless³⁸ man, with his cloak and tunic all ripped and tattered. Some people who didn't recognize him for who he was yelled, "You poor lousy³⁹ wretch!"

Yet it was this man who fashioned all the villages. Just by speaking he made⁴⁰ the fields, and finished the terraces with walls of fine masonry. As for the irrigation canals, he channeled them out from their sources just by tossing down the flower of a reed called *pupuna*.⁴¹

After that, he went around performing all kinds of wonders, putting some of the local *huacas*⁴² to shame⁴³ with his cleverness.

36. 'The life of Cuni Raya Vira Cocha' is in Quechua and seems not to be part of the inserted Spanish title.

37. A formula introducing a passage with reportive validation.

38. *huaccha* 'poor and friendless': literally, 'orphan'. Throughout the manuscript and in modern Quechua, *huaccha* means 'poor' not so much in the sense of lacking property, as in the sense of lacking social ties that enable one to be productive. It is also translated here as 'wretch', 'powerless', or 'a nobody'.

39. Lice have a peculiar double meaning, Marie-France Souffez (1986), relying partly on findings by Christopher Donnan and María Rostworowski, notes that in Mochica imagery of shamanism the lice growing on a shaman's body emblemize the many people her or his power can sustain. Latent wealth hidden in apparent squalor is a common attribute of Huarochirí protagonists.

40. 'Made' supplied.

41. In the *Tratado* (Arguedas and Duviols 1966: 201) Avila identifies the object as "a hollow reed of the sort we call 'Castilian reed'." The *pupuna* is described in a marginal note to supplement I (sec. 454) as a pole with a noose for catching parrots.

42. *llacta huacacunactapas*: the phrase contrasts Cuni,

10 Once there was a female *huaca* named Caui Llaca.

Caui Llaca had always remained a virgin.

Since she was very beautiful, every one of the *huacas* and *villcas*⁴⁴ longed for her. "I've got to sleep with her!" they thought.

But she never consented.

11 Once this woman, who had never allowed any male to fondle⁴⁵ her, was weaving beneath a *lúcuma*⁴⁶ tree.

a wandering nonlocal deity, with rooted local deities. Cults and toponyms with names reminiscent of Cuni's (Kon, Concón, etc.), appear to have been farflung over the coast (Rostworowski 1977).

43. *allcuchaspa*: literally, 'making dogs of them'. 'Dog' is consistently a term of abuse in the manuscript.

44. The exact sense of *villca* in the manuscript is uncertain but perhaps related to a contemporaneous Aymara word meaning both 'sun' and 'shrine' (Bertonio [1612] 1956: 386). Internal evidence (chap. 31, sec. 417) suggests that in the Huarochirí context it means a person who has entered into the society of *huacas* by achievement or marriage. In the *Tratado* (Arguedas and Duviols 1966: 209), the word *villca* is translated 'a very important *cacique*' (*cacique muy principal*; see also Zuidema 1973: 19). In Huáñchor village in 1621, the founding hero Huáñchor was mummified and housed underneath a *huaca* called Huanchorvilca (Arguedas and Duviols 1966: 264). Overall, the implication seems to be that a *villca* is a human being who partakes of a *huaca*'s status.

45. *chancaycochicuspa* 'fondle': González Holguín ([1608] 1952: 94) glosses related verbs as meaning 'to stroke or touch lightly'. Similar verbs in modern Quechua usually sound sexually piquant.

46. "*Lucuma bífera*, an evergreen tree, eight to ten meters high, has spreading branches with entire, elliptic-ovate leaves. The globose to ovate fruits, seven to ten cm. in diameter, are green in color and have a bright orange to yellow, dry, mealy pulp. . . . This species is a native of Peru

Cuni Raya, in his cleverness,⁴⁷ turned himself into a bird and climbed into the *lúcuma*.

He put his semen into a fruit that had ripened there and dropped it next to the woman.

- 12 The woman swallowed it down delightedly.

Thus she got pregnant even though she remained untouched by man.

In her ninth month, virgin though she was, she gave birth just as other women give birth.

And so, too, for one year she nursed her child at her breast, wondering, "Whose child could this be?"

- 13 In the fullness of the year, when the youngster was crawling around on all fours, she summoned all the *huacas* and *villcas* to find out who was the child's father.

When the *huacas* heard the message, they were overjoyed, and they all came dressed in their best clothes, each saying to himself, "It's me!" "It's me she'll love!"

- 14 This gathering took place at Anchi Cocha,⁴⁸ where the woman lived.

<margin, in Spanish:> [The gathering was in Anchi Cocha.]

When all the *huacas* and *villcas* had taken their seats there, that woman addressed them:

and is cultivated for its edible fruit. . . . Specimens of whole and halved fruits of this species . . . are among the most common plant remains found in archaeological sites on the Peruvian coast. . . . *Lucumas* were an important part of the diet of the ancient Peruvians, and halved fruits are frequently found in *petacas* [pouches, hampers] with remains of other food plants. . . . The fruit is also a familiar motif in pre-Columbian art" (Towle 1961: 76–77).

47. *amauta cayninpi* 'in his cleverness': *amauta* is the term Garcilaso Inca popularized as the Inca title of learned men or counselors, but in connection with Cuni Raya it connotes an earthy or practical kind of cleverness.

48. Avila characterized Anchi Cocha as "a terribly cold and bad place halfway between Huarochirí and Chorillo" (Arguedas and Duviols 1966: 201). Today, Anchicocha is the name of a bleak settlement, plateau, and peak 17 km southwest of Huarochirí, 3,700 m above sea level (IGM 1954). But in chapter 5 Anchi Cocha is the luxurious tropical home of a Yunca lord. *Anchini* (González Holguín [1608] 1952: 27) meant 'to live amid delights, to spend splendidly on food, drink, clothing and gifts'. Perhaps the sense is that Anchi Cocha, a Lake of Earthly Delights in the pre-invasion age when all the land was warm and belonged to Yunca people, has (like other places mentioned in chap. 8) been transfigured by the power of later *huacas* from the cold heights.

"Behold, gentlemen and lords. Acknowledge this child. Which of you made me pregnant?"⁴⁹ One by one she asked each of them:

"Was it you?"

"Was it you?"

But nobody answered, "The child is mine."

- 15 The one called Cuni Raya Vira Cocha had taken his seat at the edge of the gathering. Since he looked like a friendless beggar sitting there, and since so many handsome men were present, she spurned him and didn't question him. She thought, "How could my baby possibly be the child of that beggar?"

Since no one had said, "The child is mine," she first warned the *huacas*, "If the baby is yours, it'll crawl up to you," and then addressed the child:

"Go, identify your father yourself!"

- 16 The child began at one end of the group and crawled along on all fours without climbing up on anyone, until reaching the other end, where its father sat.

On reaching him the baby instantly brightened up and climbed onto its father's knee.

When its mother saw this, she got all indignant:

"Atatay, what a disgrace! How could I have given birth to the child of a beggar like that?" she said.

And taking along only her child, she headed straight for the ocean.

- 17 And then, while all the local *huacas* stood in awe, Cuni Raya Vira Cocha put on his golden garment.

He started to chase her at once, thinking to himself, "She'll be overcome by sudden desire for me."

"Sister Caui Llaca!" he called after her. "Here, look at me! Now I'm really beautiful!" he said, and he stood there making his garment glitter.⁵⁰

- 18 Caui Llaca didn't even turn her face back to him.

"Because I've given birth to the child of such a ruffian, such a mangy beggar,⁵¹ I'll just disappear into the ocean," she said. She headed straight out into the deep sea near Pacha Camac,⁵² out there

49. *yumahuarcanchichic* 'made me pregnant': The root is *yumay* 'sperm'. The literal sense is 'inseminated me'.

50. If Cuni Raya is indeed a water deity, as Rostworowski (1977) persuasively argues, his glittering garment may be a metaphor for water sparkling in sunlight.

51. *cachcaçapap* 'of . . . such a mangy beggar': Avila glosses *cachca* as *sarna* (i.e., scabies or mange) in his *Tratado* ([1608] 1966: 202).

52. Pacha Camac, whose name means something like 'animator of space and time', was a coastal deity whose colossal shrine complex south of Lima (still visible at the

where even now two stones that clearly look like people stand.⁵³

And when she arrived at what is today her dwelling, she turned to stone.

- 19 Yet Cuni Raya Vira Cocha thought, "She'll see me anyway, she'll come to look at me!" He followed her at a distance, shouting and calling out to her over and over.

First, he met up with a condor.⁵⁴

"Brother, where did you run into that woman?" he asked him.

"Right near here. Soon you'll find her," replied the condor.

Cuni Raya Vira Cocha⁵⁵ spoke to him and said,⁵⁶

"You'll live a long life. You alone will eat any dead animal from the wild mountain slopes, both guanacos⁵⁷ and vicuñas,⁵⁸ of any kind and in any number. And if anybody should kill you, he'll die himself, too."

- 20 Farther on, he met up with a skunk.⁵⁹

mouth of the Lurín valley, next to the modern village of Pachacámac) attracted worship from remote prehistory and from regions far up the Pacific littoral. His cult is prominent in chapters 20, 22, and 23; see Patterson (1984[?]).

53. The two guano-whitened offshore islands visible from the Inca pyramid at Pachacámac. This landmark and Cui Laca's lithification complete the trajectory of a story that follows the course of the Lurín River from its high headwaters (Anchicocha) to the Pacific. Cuni Raya's fertilizing action on Cui Laca seems a mythic image of the river's life-giving effect on its valley.

54. "*Andean condor*, *Vultur gryphus* (Cóndor). Twice the size of a vulture. Black, head bare and yellowish-red, white collar, wing coverts whitish. Male with a flesh caruncle on the bill. Juvenile dusky brown without the collar and white wing patches. Seen flying high it differs from the turkey vulture only in its size and the diagnostic fingering of the feathers of the wingtips. Feeds principally on dead animals. Nests in the Andes; comes down regularly to the sea beaches and coastal hills with fog vegetation" (Koeppke 1970: 38).

55. 'Cuni Raya Vira Cocha' supplied.

56. Cuni Raya's speeches to the animals have witness validation, which is consistently used in performative (world-changing rather than world-describing) speech.

57. *Lama guanicoe*, a large wild camelid ranging from the Andes into lower semiarid lands (Cabrera and Yepes 1940: 257).

58. *Lama vicugna*, a small wild camelid of the heights, prized for its excellent wool (Gade 1977: 113).

59. "*Zorrino chileno*, *Conepatus chinga* . . . its Quichua name used in Peru is *añas*" (Cabrera and Yepes 1940: 153).

"Sister, where did you meet that woman?" he asked.

"You'll never find her now. She's gone way far away," replied the skunk.

When she said this, he cursed her very hatefully, saying,

"As for you, because of what you've just told me, you'll never go around in the daytime. You'll only walk at night, stinking disgustingly. People will be revolted by you."

- 21 Next he met up with a puma.⁶⁰

"She just passed this way. She's still nearby. You'll soon reach her," the puma told him.

Cuni Raya Vira Cocha⁶¹ spoke to him, saying,

"You'll be well beloved. You'll eat llamas, especially the llamas of people who bear guilt. Although people may kill you, they'll wear you on their heads during a great festival and set you to dancing.⁶² And then when they bring you out annually they'll sacrifice a llama first and then set you to dancing."

- 22 Then he met up with a fox.⁶³

"She's already gone way far away. You'll never find her now," that fox told him.

When the fox said this, he replied,

"As for you, even when you skulk around keeping your distance, people will thoroughly despise you and say, 'That fox is a sneak thief.' When they kill you, they'll just carelessly throw you away and your skin, too."

<A marginal addition in Quechua begins here:>

- 23 Likewise he met up with a falcon.⁶⁴

60. *Puma concolor* (Cabrera and Yepes 1940: 167–172).

61. 'Cuni Raya Vira Cocha' supplied.

62. *taquechisonque* 'they'll . . . set you to dancing': more literally, 'they will make you dance'; here as elsewhere in the manuscript, this means celebrants carry or wear the sacred preserved skin as they perform. In his *Tratado* Avila explained that the dancer placed the animal's preserved head over his own and let the attached skin fall over his body like a cape (Arguedas and Duviols 1966: 203).

63. Probably the Peruvian fox, *Pseudalopex inca* (Cabrera and Yepes 1940: 125).

64. The region of the myth has seven species of hawks, harriers, and kites, and three of falcon. *Huaman* may refer to a species that, like some other birds prominent in the mythology (the condor and the swift), nests on the Andean heights but sometimes flies to the coast and thereby parallels the axis of movement in these myths. "*Aplo-mado falcon*, *Falco femoralis pichinchae* (*Halcón perdi-*

"She's just passed this way. You'll soon find her," said the falcon.

He replied,

"You're greatly blessed. When you eat, you'll eat the hummingbird first, then all the other birds. When people kill you, the man who has slain you will have you mourned with the sacrifice of a llama. And when they dance, they'll put you on their heads so you can sit there shining with beauty."

- 24 And then he met up with some parakeets.⁶⁵

"She's already gone way far away. You'll never find her now," the parakeets told him.

"As for you, you'll travel around shrieking raucously," replied Cuni Raya Vira Cocha.⁶⁶ "Although you may say, 'I'll spoil your crops!' when people hear your screaming they'll chase you away at once. You'll live in great misery amidst the hatred of humans."

<The marginal addition ends here.>

And so he traveled on. Whenever he met anyone who gave him good news, he conferred on him a good fortune. But he went along viciously cursing those who gave him bad news.

guero). Larger than the Kestrel, with a longer tail. Lead-colored above, superciliary line cinnamon; below buffy cinnamon, tail and flanks blackish with horizontal white stripes. Generally seen in our region above 2000 m., but occasionally it comes down to the coastal area. Feeds largely on birds to the size of a tinamou" (Koepcke 1970: 42). The hummingbird allotted to the falcon as food below might represent any or all of the six Lima Department hummingbird species (Koepcke 1970: 79–80).

65. *horitocunahuan* 'with some parakeets': *horito* in chapter 16 (sec. 207) is equated to the poorly identified bird *caqui* (toucan?), but in chapter 1 (sec. 5) it is distinguished from it. Here it clearly refers to a crop pest. The likeliest identification is

Mountain parakeet, *Bolborhynchus a. aurifrons* (*Psilopsiagon a. aurifrons*) (*Perico cordillerano*). The only native wild parakeet of our coastal region. Small, with a very long tail; F. and J. completely green; M. with the forehead, face, and underparts yellowish. Common on the steppes and shrubby places of the coast and Andean slopes; also gathers in cultivated fields, tree plantations, gardens, and parks of Lima. During the winter it is abundant on the coastal hills and in wooded and shrubby places with fog vegetation, especially at Lachay.

It could also be Andean parakeet, *Bolborhynchus andinicolus* (*B. orbygnesi*) (*Perico Andino*), found only above 1500 m., or (less probably, because of its rarity) the Scarlet-fronted parakeet, *Aratinga wagleri frontata* (*Cotorra de Wagler*; Koepcke 1970: 74).

66. 'Cuni Raya Vira Cocha' supplied.

- 25 When he reached the seashore, <crossed out in original MS:> [he went straight over it. Today people say, "He was headed for Castile," but in the old days people said, "He went to another land."]⁶⁷

he turned back toward Pacha Camac.

He arrived at the place where Pacha Camac's two daughters lived, guarded by a snake.

Just before this, the two girls' mother had gone into the deep sea to visit Caui Llaca. Her name was Urpay Huachac.

While Urpay Huachac was away, Cuni Raya Vira Cocha seduced⁶⁸ one girl, her older daughter.

When he sought to sleep with the other sister, she turned into a dove⁶⁹ and darted away.

That's why her mother's name means 'Gives Birth to Doves'.

- 26 At that time there wasn't a single fish in the ocean.

Only Urpay Huachac used to breed them, at her home, in a small pond.⁷⁰

It was these fish, all of them, that Cuni Raya angrily scattered into the ocean, saying, "For what did she go off and visit Caui Llaca the woman of the ocean depths?"

Ever since then, fish have filled the sea.

- 27 Then Cuni Raya Vira Cocha fled along the seashore.

When Urpay Huachac's daughters told her how he'd seduced them, she got furious and chased him.

As she followed him, calling him again and again, he waited for her and said, "Yes?"

"Cuni, I'm just going to remove your lice," she said, and she picked them off.

- 28 While she picked his lice, she caused a huge abyss

67. *huc pachamansi* could also be read 'another world'. The crossed-out version matches Vira Cocha myths circulated in the highlands and better known among Spaniards (Urbano 1981: 1–31).

68. Or perhaps raped her; *puño chirican*, more literally, 'he made her sleep', could mean either. We chose 'seduce' because it is González Holguín's preferred gloss ([1608] 1952: 296) and because deception, not violence, is Cuni Raya's consistent mode of action.

69. Of nine species of doves known in the region, three are common near the seashore: the white-winged dove (*Zenaida asiatica meloda*), the eared dove (*Zenaidura auriculata hypoleuca*), and the croaking ground dove (*Columbina cruziana*) (Koepcke 1970: 69–71).

70. Probably an allusion to pisciculture, perhaps in excavated tanks (Espinoza Soriano 1974: 19; Rostworowski 1981: 30–31).

to open up next to him, thinking to herself, "I'll knock Cuni Raya down into it."

But Cuni Raya in his cleverness realized this, just by saying, "Sister, I've got to go off for a moment to relieve myself,"⁷¹ he made his getaway to these villages.

71. The verb in the original, from the root *ysmay*, is

He traveled around this area for a long, long time, tricking lots of local *huacas* and people, too.

<**marginal note**, in Spanish, crossed out:> [n.b. This *huaca*'s end will be told below.]

merely plainspoken. But the plain translation 'to shit' sounds jarringly obscene.

CHAPTER 3

29

What Happened to the Indians in Ancient Times When the Ocean Overflowed

Now we'll return to what is said of very early people.

The story goes like this.⁷²

In ancient times, this world wanted to come to an end.⁷³

A llama buck, aware⁷⁴ that the ocean was about to overflow, was behaving like somebody who's deep in sadness. Even though its <crossed out:> [father] owner let it rest in a patch of excellent pasture, it cried and said, "In, in," and wouldn't eat.

30 The llama's <crossed out:> [father] owner got really angry, and he threw the cob from some maize he had just eaten at the llama.

"Eat, dog! This is some fine grass I'm letting you rest in!" he said.

Then that llama began speaking like a human being.

"You simpleton, whatever could you be thinking about? Soon, in five days, the ocean will overflow. It's a certainty. And the whole world will come to an end," it said.

31 The man got good and scared. "What's going to happen to us? Where can we go to save ourselves?" he said.

The llama replied, "Let's go to Villca Coto mountain."⁷⁵

72. Text shifts at this point from witness to reportive validation.

73. *cay pachas puchocayta munarcan* 'this world wanted to come to an end': *puchocay* means the ending of something that has an intrinsic conclusion (as, for example, the finishing of a task), not a truncation or accidental end (González Holguín [1608] 1952: 293).

74. The prescience of llamas: see chapter 18 (secs. 221–222), on llama divination, where the animal's body is credited with containing signs of the future.

75. A mountain today called by this name exists 12

<margin, in Spanish:> [This is a mountain that is between Huanri⁷⁶ and Surco.]⁷⁷

There we'll be saved. Take along five days' food for yourself."

So the man went out from there in a great hurry, and himself carried both the llama buck and its load.

32 When they arrived at Villca Coto mountain, all sorts of animals had already filled it up: pumas, foxes, guanacos, condors, all kinds of animals in great numbers.

And as soon as that man had arrived there, the ocean overflowed.

They stayed there huddling tightly together.

33 The waters covered all those mountains and it was only Villca Coto mountain, or rather its very peak, that was not covered by the water.

Water soaked the fox's tail.

That's how it turned black.

Five days later, the waters descended and began to dry up.

34 The drying waters caused the ocean to retreat all the way down again and exterminate all the people.

km northwest of San Damián, between modern Huanre and Surco (Treacy 1984: 18). Villca Coto may be the same *huaca* mentioned in chapter 23 (sec. 301), the most beautiful one at the Inca court in Cuzco.

76. Modern Huanre is 5 km south of San Bartolomé (IGM 1970–1971).

77. The modern (former *reducción*) town of San Gerónimo de Surco is 17 km north-northwest of San Damián at 2,300 m above sea level, sheltered in the Rímac valley (IGM 1970–1971).

Afterward, that man began to multiply once more.

That's the reason there are people until today.

Regarding this story, we Christians believe it refers to the time of the Flood.⁷⁸

But they believe it was Villca Coto mountain that saved them.

78. This sentence has *-mi* eyewitness validation.

CHAPTER 4

35

How the Sun Disappeared for Five Days. In What Follows We Shall Tell a Story about the Death of the Sun

In ancient times⁷⁹ the sun died.⁸⁰
Because of his death it was night for five days.
Rocks banged against each other.

79. This formula introduces a passage with reportive validation.

80. Like various New World mythologies, Andean myths both ancient and modern include a motif of successive deaths and replacements of suns. Juan Ossio believes this chapter and Guaman Poma's scheme of "ages" are related to Montesinos' mid-seventeenth-century account of an Andean myth about successive suns equated to millennia (Ossio 1973: 188). Many modern Andeans interpret precolumbian structures as the houses of people who lived before the current sun arose.

81. The myth of the revolt of the objects, of which this appears to be a summary, also appears in a fuller

Mortars and grinding stones began to eat people.
Buck llamas started to drive men.⁸¹

Here's what we Christians think about it:⁸² We think these stories tell of the darkness following the death of our Lord Jesus Christ.⁸³

Maybe that's what it was.

Mayan version that, like this one, follows on a flood incident (Tedlock 1985: 84–86). Hocquenghem (1987: 142–143) and Jeffrey Quilter (personal communication) point out analogues in Mochica ceramic imagery from the Peruvian north coast.

82. This sentence has witness validation.

83. Luke 23: 44–45: "It was now about the sixth hour and darkness came over the whole land until the ninth hour, for the sun stopped shining."

CHAPTER 5

36

How in Ancient Times Paria Caca Appeared on a Mountain Named Condor Coto in the Form of⁸⁴ Five Eggs, and What Followed. Here Will Begin the Account of Paria Caca's Emergence⁸⁵

In the four preceding chapters we have already recounted the lives lived in ancient times.

Nevertheless, we don't know the origins of the people of those days, nor where it was they emerged⁸⁶ from.

- 37 These people, the ones who lived in that era, used to spend their lives warring on each other and conquering each other. For their leaders, they recognized only the strong and the rich.⁸⁷

We speak of them as the *Purum Runa*, 'people of desolation'.⁸⁸

84. 'In the Form of' supplied.

85. The last part of the title here is in Quechua and does not form part of the Spanish insertion.

86. *pacarimuscuncunactam* 'the origins' and *pacari-murcan* 'they emerged' both derive from a single root meaning literally 'to dawn' (González Holguín [1608] 1952: 266–267; see also preface, sec. 2). An Andean group's 'dawning' or emergence from inside earth to outer daylight is its origin myth and primordial title to a place on the landscape that engendered it.

87. *rico* 'rich': the Spanish word is sometimes used in this chapter (secs. 46, 60) as the opposite of *huaccha* 'friendless, poor'. *Rico* seemingly implies wealth in possessions (chap. 19, sec. 235) rather than the rich social and superhuman connectedness suggested by Quechua *capac* (opposite of *huaccha* in sec. 49). Its use here may reflect the ascendancy of economic concepts connected with the Spanish market system.

88. The age here mythologized seems to be the Late Intermediate period of the archaeologists, that is, the centuries preceding Inca unification and characterized by a multitude of warring polities. *Purum* (González Holguín [1608] 1952: 297) covers a spectrum of meanings from the agricultural ('sterile lands, lands abandoned from cultiva-

- 38 It was at this time that the one called Paria Caca was born in the form of five eggs on Condor Coto mountain.⁸⁹

A certain man, and a poor friendless one at that, was the first to see and know the fact of his birth; he was called Huatya Curi, but was also known as Paria Caca's son.

Now we'll speak of this discovery of his, and of the many wonders⁹⁰ he performed.⁹¹

tion') to the political ('unconquered people, enemies'). 'Desolation' is chosen to evoke the linkage between warfare and infertility.

The "Indian chronicler" Felipe Guaman Poma de Ayala also gave the name "*Purun Runa*" to an ancient age of warfare ([1615] 1980: 1:47–50).

89. Condor Coto may be the peak called Condorcoto today, only 14 km southwest of Huarochirí, that is, nowhere near Paria Caca mountain but close to Anchi Cocha (IGM 1970–1971). The fact that Paria Caca's emergence takes place within what was seen as old Yunca country may suggest that the myth-tellers saw themselves as a foreign minority group enclaved and formerly oppressed in Yunca country.

Condor Coto would mean 'Condor mountain' in Aymara (Bertonio [1612] 1956: 53) or Quechua (González Holguín [1608] 1952: 70).

90. *ahca misterio* 'many wonders': in Spanish, a *misterio*, according to Cobarruvias ([1611] n.d.: 807) meant any sacred thing that was to be kept hidden from profane view. Basic Christian doctrines were called *misterios* in the Quechua sermon books from which the clergy were required to teach natives (*Tercero catecismo* [1585] 1985: 363–458). The usage of *misterio* implicitly compares the secret meaning of Paria Caca's action, revealed to Huatya Curi, to the meanings of Christian revelation.

91. End of an introductory passage with witness vali-

39 They say⁹² that fellow called Huatya Curi subsisted at the time just by baking potatoes in earth pits,⁹³ eating the way a poor man does,⁹⁴ and people named him the “Baked Potato Gleaner.”

At that time there was another man named Tamta Namca,⁹⁵ a very rich and powerful lord.

<margin, in Spanish:> [n.b. Tamta Namca]

Both his own house and all his other houses⁹⁶ looked like *cassa* and *cancho* feather-weavings, for they were thatched with wings of birds.⁹⁷ His llamas were yellow llamas, red and blue llamas, he owned llamas of every hue.

<margin:> [Tamta Namca]

40 Seeing that this man lived so well, people who came from all the villages paid him homage and worshiped him.

For his part, he pretended to be very wise and spent his life deceiving a whole lot of people with the little that he really knew.

dation. The editor/redactor is not always explicitly skeptical of the content of traditional narration.

92. ‘They say’ supplied to indicate shift to reportive validation.

93. *huatya*, potatoes baked in an earth pit, were and are characteristic food of high-altitude peasants who cook outdoor meals while harvesting tubers on the high slopes.

94. ‘The way a poor man does’: Avila in his *Tratado* (Arguedas and Duviols 1966: 208–209) adds a comment that eating *huatya* (earth-baked potatoes) was a mark of poverty. Avila may, however, have missed part of the name’s meaning, namely, the part connected with its second element *Curi*. It may come from “*ccorini* to gather and collect small or scattered things.” A derived verb means ‘to glean through the harvested fields or pick up spilled or abandoned things’ (González Holguín [1608] 1952: 69). A person reduced to picking through other people’s abandoned barbecue pits is dispossessed in the highest degree, lacking even subsistence rights and in this sense eats ‘the way a poor man does’.

95. This man’s name contains the word *tamta* ‘feather ruff’ (Arriaga [1621] 1968: 50; Keating’s translation). Featherwork is the symbol of his wealth and glory; his house is thatched with feathers. Andean featherwork found in tombs is made from tropical birds and probably symbolizes the biotic plenty of warm *yunca* lands.

96. That is, the houses for his wives, servitors, and so forth.

97. The image seems to be that of a house thatched with the brilliantly colored feather-weavings sometimes found in prehispanic elite burials. Avila says in his *Tratado* that the roof was of yellow and red feathers (Arguedas and Duviols 1966: 209).

Then this man called Tamta Namca, who pretended to be so wise, even to be a god,⁹⁸ contracted a really horrible disease.

41 His illness went on for a great many years, and in time people talked. “How can a man who knows so much, who’s so powerful, be so sick?” they said.

Just like the Spaniards who, on such occasions, summon experts and doctors, Tamta Namca, hoping to recover, summoned all sorts of shamans and wise men.⁹⁹

<margin, in Spanish:> [The wise men gathered.]

But no one at all could diagnose that disease of his.

42 Just then Huatya Curi was coming from the vicinity of Ura Cocha,¹⁰⁰ and he went to sleep on the mountain by which we descend to Sieneguella.¹⁰¹ (Today this mountain is called Latab Zaco.)

While he was sleeping, a fox who’d come from down below and one who’d come from up above¹⁰² met face to face¹⁰³ there. One fox asked the other, “Brother, how are things in Upper Villca?”

43 “What’s good is good. But a lord in Anchi Cocha,

98. *dios*: the Spanish word ‘god’, perhaps used in a Greco-Roman rather than Christian sense.

99. *amautacunacta doctorcunacta* . . . *yachaccunacta sauiocunacta* ‘experts and doctors . . . shamans and wise men’: the teller draws an implicit contrast between two pairs of terms, each consisting of a Quechua and a Spanish word: *amauta* : *doctor* :: *yachac* : *sauioc*. The suggestion seems to be that a doctor, a bureaucratically licensed expert, can be compared with an *amauta*, and a *sauioc* or wise man with a *yachac*. *Yachac* (literally, ‘knower’) today means a shaman.

100. *ura cochañicmanta* ‘from the vicinity of Ura Cocha’ is more literally ‘from someplace around [the?] lower lake’. The ‘lower lake’ is probably the Pacific Ocean (called *mama cocha* ‘Mother Lake’ today). This term recurs in chapter 8 (sec. 103) and chapter 22 (sec. 278).

101. Modern Cieneguilla is in the low end of the Lurín valley 62 km west of Huarochiri (IGM 1970–1971), close to the ocean and to Lima.

102. In his *Tratado* ([1608] 1966: 209) Avila explains that this means one fox came down from Anchi Cocha and the other up from the Pacific.

103. *chaypi pactalla tincuspas* ‘face to face’ understates the Quechua’s emphasis on symmetry. A fuller though ungainly gloss would be ‘symmetrically opposing each other there in an exact fit’. The verb *tincuy* carries a complex set of associations with the idea of opposed parts forming a complementary totality (Platt [1978] 1986).

a *villca* as a matter of fact, one who claims to know a whole lot, to be a god himself, is terribly ill. All the wise men who found their way to him are wondering, 'Why's he so ill?' No one can identify his sickness. But his disease is this: while his wife was toasting maize, a grain of *muro*¹⁰⁴ maize popped from the griddle and got into her private part.¹⁰⁵

- 44 "She picked it out and served it to a man to eat. Because of having served it, she became a sinner in relation to the man who ate it." (Nowadays they reckon that act tantamount to being an adulteress.)¹⁰⁶

"As a result of this fault," he told the fox who'd come from down below, "a snake¹⁰⁷ has made its dwelling on top of that magnificent house and is eating them up. What's more, a toad, a two-headed one, lives under their grinding stone. And nobody is aware of these devouring animals."

- 45 Then he asked, "And how are people doing in Lower Villca, brother?"

The other fox answered similarly, saying, "There's a woman, the offspring of a great lord and a *villca*, who almost died because of a penis."¹⁰⁸

(But the story leading up to the woman's recovery is very long.¹⁰⁹ Later on we'll write about it. For now, we'll return to the first story.)

104. *muro*: could mean 'particolored, spotted' (the generic meaning of *muro*) but may also be a local form of the term *muruchu* 'maize of the coastal flatlands, very hard' (González Holguín [1608] 1952: 252).

105. *pincayninmanmi*: literally, 'into her shame'. Shame-oriented terms from Quechua lexicon but reflecting Christian mentality are common in most but not all the sexually colored passages and are sometimes written in over scratched-out plainspoken Quechua terms.

106. The speaker adds this remark as if aware that his listeners would find the classification of the mistake as adultery puzzling. Perhaps the word *huachuc* 'adulterer' formerly covered a gamut of sexual transgressions besides adultery proper. Avila deviates from this version in saying the woman actually committed adultery with the man (Arguedas and Duviols 1966: 209).

107. *huc machachuay* 'a snake': in sec. 50 the snakes are clearly said to be two, but the discrepancy may only be apparent since the phrase with *huc* could mean 'some snakes'.

108. This alludes to a myth that would be the symmetrical counterpart (*tinkuy*; see chap. 5, sec. 43) of the first fox's story: a false nobleman ill from a vagina, a true noblewoman ill from a penis. Taylor (1987b: 92) detects an interlineation translatable as 'daughter of that great lord' (i.e., of Tamta Ñamca). If so, the woman made ill by a penis might be Chaupi Ñamca.

109. Chapter 10 (sec. 146) may be a truncated version

- 46 As the foxes were telling each other these tidings, the man called Huatya Curi heard that the great lord who pretended to be a god was ill.

This great man had two daughters.

He had joined the elder daughter to a fellow *ayllu* member¹¹⁰ who was very rich.

<margin, in Quechua:> [He married her.]¹¹¹

The poor man called Huatya Curi came to that lord while he was still ill.

- 47 When he arrived, he went around asking surreptitiously, "Isn't someone sick in this town?"

"It's my father who's sick," replied the younger daughter.

Huatya Curi answered, "Let's get together. For your sake I'll cure your father."

<crossed out:> [We don't know this young woman's name.]¹¹²

<margin, in Quechua:> [But later on they called her Chaupi Ñamca.]¹¹³

The young woman didn't agree right away.

- 48 She told her father, "Father, there's a poor man here. He came and said to me, 'I'll cure your father.'"

All the wise men who were sitting there burst into laughter when they heard these words, and said, "If we ourselves can't cure him, how can this nobody make him well?"

But that lord wanted a cure so badly that he called for Huatya Curi. "Let him come, never mind what sort of man he is," he said.

- 49 When the great lord summoned him, Huatya Curi entered and said, "Father, if you want to get well, I'll make you well. But you have to give me your daughter."

Overjoyed, Tamta Ñamca replied, "Very well then!"

But when his older daughter's husband heard this proposition he flew into a rage. "How dare he join her, the sister-in-law of such a powerful¹¹⁴ man as me, to a nobody like that?"

of this myth. This aside has the witness validation typical of the editor or redactor's comments.

110. *ayllonhuantac* 'to a fellow *ayllu* member': *ayllu* endogamy is common in Andean societies.

111. *casarachircan* 'he married her': the verb root is a Spanish one, clarifying the perhaps unfamiliar sense of *tinquichircan* 'he joined [her]' in body of text.

112. This aside has witness validation.

113. I.e., in chapter 10 (sec. 142).

114. 'Powerful' is a weak rendering of *camac*, agentive

50 Later on we'll tell about this angry man's struggle with Huatya Curi.

But for now we'll return to the cure the poor man called Huatya Curi effected.

Huatya Curi began his cure by saying, "Father, your wife is an adulteress. Because she's an adulteress, a sinner, she's made you ill. As for what's eating you,¹¹⁵ it's the two snakes that dwell on top of this magnificent house of yours. And there's a toad, too, a two-headed one, that lives under your grinding stone.

51 "Now we'll kill them all. Then you'll get well. After you recover, you must worship my father above all things. He'll be born tomorrow or the day after. And as for you, you're not such a powerful man. If you were really powerful, you wouldn't be sick."

The rich man was astonished when Huatya Curi said this.

52 And when Huatya Curi said, "Now I'll take apart this gorgeous house of his," he became distraught. And his wife started yelling, "This nobody, this crook, is slandering me! I'm no adulteress!"

53 Nonetheless the sick man wanted his health back very badly, and he let his house be dismantled.

Then Huatya Curi removed the two snakes and killed them. Next he clearly explained the facts to the rich man's wife: just how a grain of *muro* maize had popped out and gotten in her private part, and how she, after picking it out, had served it to a man.

After that, the woman confessed everything. "It's all true," she said.

54 Next he had the grinding stone lifted.

A toad, a two-headed one, came out from under it and fled to Anchi Cocha ravine.

It exists in a spring there to this day.
<margin, in Spanish:> [Ask the name of this spring and where it is.]

form of the key verb *camay* discussed in the introduction and note 31 in chapter 1 (sec. 7). A *camac* man would be one who can impart his own power to others and impose his will.

115. *camta micucuri* 'as for what's eating you': the illness may be leishmaniasis, an infectious disease often pictured in Mochica ceramics, which eats away at the soft tissues of the nose and lip.

When people come to that spring, it either makes them disappear or else drives them crazy.

55 Once Huatya Curi finished all these deeds <crossed out in original:> [her¹¹⁶ father] the ailing man got well.

After Tamta Ñamca's recovery, on the day that had been foretold, Huatya Curi went for the first time to Condor Coto mountain.

It was there that the one called Paria Caca dwelled in the form of five eggs.¹¹⁷

All around him a wind rose up and began to blow.

In earlier times no wind had been observed.

56 Just before he went there on the appointed day, the man who'd recovered his health gave him his unmarried daughter.

While the two of them were traveling in the vicinity of that mountain they sinned together.¹¹⁸

57 As soon as that elder brother-in-law heard they'd sinned together he set out to compete against Huatya Curi.

"I'll bring deep shame on that beggarman," he muttered.

And so one day that man challenged him, saying, "Brother, let's have it out in a contest, whatever kind. How dare a nobody like you marry the sister-in-law of a powerful man like me?"

That poor man agreed, and went to inform his father Paria Caca,
<margin, in Spanish:> [That is, <he went> to one of the above-mentioned eggs that this man had for a father.]

and said, "This is how he spoke to me."

"Very well then. Whatever he tells you, come to me right away," his father replied.

58 The contest between them was like this.

116. *yayanca* 'her [or his] father' is the crossed-out word; it might refer to the father of Huatya Curi's young woman or of her sister (i.e., to Tamta Ñamca).

117. *runto* 'egg': can also mean 'hailstone' (González Holguín [1608] 1952: 321), a relevant association because Paria Caca regularly acts in the form of a storm.

118. *hochallicorcan* 'they sinned together': *hochallicay*, like *pinçay* 'private part' (literally, 'shame'), is a shame-oriented term of Quechua lexicon and Christian mentality. The verb root employed seems to have meant a ceremonial debt or obligation (it is still used in this sense), but Christian missionaries chose it as the translation for 'sin'.

One day the challenger said, "Let's have a drinking and dancing contest."

So that poor man Huatya Curi went to inform his father.

His father Paria Caca advised him, "Go to that mountain over there. There you'll pretend to be a guanaco and lie down as if dead. Early in the morning a fox with his skunk wife will come there to see me.

59 "They'll bring their maize beer in a small long-necked jar¹¹⁹ and they'll also bring along their drum. When they spot you, a dead guanaco, they'll set their things on the ground, and as soon as the fox puts down his panpipes, they'll start to eat you. Then turn back into a man, scream so loud it hurts their ears, and run away. When they scamper off forgetting their possessions, you'll take them and go to the contest."

60 The poor man did as he was told.

The rich man was the first to dance in the contest.

His wives, who numbered almost two hundred, danced along with him, and after they were done the poor man entered by himself, with only his wife, just the two of them.

As they entered through the doorway, as they danced to the skunk's drum he'd brought along, the earth of that whole region quaked.¹²⁰

With this, he beat them all.

61 Next, they began drinking.

Huatya Curi went with just his wife to sit at the head of the group,¹²¹ exactly as guests do until today.

And all of those people who were sitting there served him drink after drink without giving him a break.

Even though he drank every bit of it he sat there with no problem.

119. *huchoylla porongo* 'small long-necked jar' sounds like the aryballoid form jars made in various sizes for carrying maize beer. They have been found in virtually all Inca-influenced archaeological sites.

120. Avila spells out the point in his *Tratado*: not just the people but "the whole earth danced to the beat of its sound" (Arguedas and Duviols 1966: 211).

121. The seating of ceremonial guests in rank order, recurrent in many parts of the text, can be seen today in various parts of the Andes. Sponsors of the ceremony sit on stools at the head places, while guests sit in descending order of prestige and strangers or mendicants at the opposite extreme.

62 Then it was his turn. He began to serve the maize beer he'd brought in that little long-necked jar, and everybody ridiculed him. "How could he possibly fill so many people from such a tiny jar?" they said.

But when he began to serve, starting from the head of the gathering, they dropped down drunk in no time, one after another.

63 The next day, since Huatya Curi had won, the other man wanted a different contest.

This contest was all about outdoing each other in splendid costumes decorated with the exquisite feather-weavings called *cassa* and *cancho*.¹²²

So Huatya Curi again went to his father.

His father gave him a snow garment.

<margin:> [or *riti*]¹²³

In that garment he dazzled¹²⁴ all the people's eyes and won the contest.

64 Then the challenger said, "Let's compete in putting on puma skins."

That man wanted to win by wearing the puma skins he had.¹²⁵

The poor man, following his father's advice, went to a spring early in the morning and brought back a red puma skin.

He danced. And while he was dancing in that red puma, a rainbow appeared in the sky, like the rainbow that appears in the sky today.

65 Next the rich man wanted to compete at house-building.

Since that man had access to many people, he almost finished a large house in a single day.

The poor man just laid down the foundations and then strolled around all day long with his wife.

That night all kinds of birds, snakes, and other animals of the land walled the house.

122. That is, the same feather-weavings that adorned Tamta Namca's roof (chap. 5, sec. 39).

123. *riti*: another Quechua word for snow.

124. *rupachispa* 'dazzled': the word is derived from a root meaning 'to burn' and may mean that his snow garment dazzled them with snowblindness. It is different from *tutayachic* 'which . . . dazzles' (chap. 20, sec. 250). The latter literally means 'benights'.

125. See note 62. In chapter 10 (sec. 150) we learn that owners of llama herds symbolized their prosperity by wearing puma skins; like pumas, they lived off llamas. Since the challenger is said to be rich, he presumably had many herds and therefore many puma skins. Zuidema (1985: 225) suggests that wearing puma skins in ceremony signified sovereignty over a body politic.

The next day, seeing it already finished, the challenger was awestruck.

- 66 Likewise Huatya Curi won at roofing the house. All the guanacos and vicuñas brought his thatching straw.

As for the other man, while his materials were being transported on llamas, Huatya Curi availed himself¹²⁶ of a bobcat's¹²⁷ help. He lay in ambush for them by a cliff, stampeded them, and destroyed them by making them fall over it.

By this trick¹²⁸ he won again.

- 67 After winning all these contests, the poor man spoke just as his father had advised: "Brother, we've competed so many times now, always agreeing to your rules. Now you agree to my rules."

"Very well then," the rich man agreed.

Huatya Curi said, "Now, with blue tunics! And let our breechclouts be of white cotton! That's how we'll dance!"

"Very well then," the rich man agreed.

- 68 The rich man, since he'd danced first from the beginning <crossed out in original:> [danced], went ahead and danced first.

As he was dancing, Huatya Curi charged down on him from outside screaming. That man panicked, turned into a brocket deer,¹²⁹ and ran away.

And his wife followed him, saying, "I'll die with my own old man!"¹³⁰

- 69 Then that poor man flew into a rage: "Go, idiot! You two have victimized me so much, I'll kill you!" he said, and he chased after them.

Chasing them, he caught the wife on the road to

126. *mincaspa* 'availed himself': more literally, he 'contracted' the bobcat's help (González Holguín [1608] 1952: 240). While his brother-in-law had access to the labor of many people and domesticated animals (llamas), Huatya Curi has access, thanks to Paria Caca's help, to creatures of the wild (skunk, fox, guanaco, bobcat, etc.).

127. *oscullo* 'bobcat': a cat of the genus *Oncifelis*, possibly *Oncifelis geoffroyi* or *Oncifelis salinarum* (Cabrera and Yepes 1940: 161).

128. 'Trick' supplied.

129. *lloychu* 'brocket deer': *Mazama simplicicornis*. A small species widespread in the southern half of South America, up to 65 cm tall, found especially in "savannas with trees and forest edges on the flatlands, as well as on the heights" (Renard-Casevitz: 1979: 24–25).

130. *cosallayhuantac* 'with my own old man': to convey the affectionate tone that *-lla* imparts to *cosa* 'husband'.

Anchi Cocha and stood her upside down on her head. "People coming from up above and those coming from down below will gape at your private parts as they pass by," he said.

And right then and there she turned to stone¹³¹ instantly.

- 70 This stone, just like a woman's legs with thighs and a vagina,¹³² stands there until today.

Even now people put coca on top of it when they undertake something.

<margin, in Spanish:> [Ask why they put this coca.]

But the man who'd turned into a brocket deer climbed up a mountain and disappeared.

- 71 (Now, in ancient times, brocket deer used to eat human beings.¹³³

Later on, when brocket deer were very numerous, they danced, ritually chanting, "How shall we eat people?"

Then one of their little fawns made a mistake and said, "How shall people eat us?"

When the brocket deer heard this they scattered.

From then on brocket deer became food for humans.)

- 72 After Huatya Curi finished all these deeds, Paria Caca flew forth from the five eggs in the shape of five falcons.

<margin, in Quechua:> [The birth of Paria Caca.]

These five falcons turned into humans and they began to roam around.

And at that time, hearing all about the things people had done, about how that man called Tamta Namca had said, "I am a god," and about how the man had himself worshiped, Paria Caca went into a rage over all these sins of theirs. Rising up as rain, he flushed them all away to the ocean, together

131. Mythic figures commonly lithify (i.e., become local *huacas* consisting of geological features) when they complete their role in the mythic drama.

132. *racayoc* 'with a vagina': unlike many sexual words in the manuscript, this is a plain Andean one without Christian-style euphemism.

133. Interpolated myth-within-a-myth: how brocket deer became human food. The myth echoes a theme of chapters 1 and 27: the way overpopulation caused hunger in ancient times. The brocket deer, like ancient people, overreproduced until getting food became a problem. The conditions of their life had to be reversed. They became subject to individual death so that they could have collective life. The same happens to humans in chapter 27.

with all their houses and their llamas, sparing not a single one.

- 73 At that time, too, there was something called the Pullao, which bridged like an arch Llantapa mountain¹³⁴ and another mountain called Vichoca.¹³⁵

134. Llantapa mountain today is 14 km southwest of Llacsa Tambo (if the latter is modern Llaquistambo) (IGM 1970–1971).

135. Modern Guichuca peak, 4,000 m above sea level, 14 km southwest of Llantapa (IGM 1970–1971). This co-

That thing called the Pullao was a gigantic tree. Monkeys, toucans, and birds of all colors used to live on it.

These animals, too, all of their kind, he swept to the sea.

After he finished these feats, Paria Caca ascended to the place that's known today as Upper Paria Caca.

In the next chapter we'll speak about his ascension.¹³⁶

lossal bridge over the Lurín river canyon must have been the mythic portal of the middle and lower *yunca* lands.

136. This sentence has witness validation.

CHAPTER 6

74

How Paria Caca Was Born as Five Falcons and Then Turned into Persons, and How, Already Victorious over All the Yunca of Anchi Cocha, He Began to Walk toward Paria Caca Mountain, and What Happened along the Way

Once Paria Caca had become human and was full grown, he began to search for his enemy.

His enemy's name was Huallallo Caruincho, the Man Eater, the Man Drinker.¹³⁷

Later on we'll describe him together with his battles.¹³⁸

In fact we already did talk in the first chapter about Huallallo Caruincho's life, how he ate people, and all his deeds.

<margin, in Spanish:> [the first chapter]

75 Now we'll tell about the things he did in Huaró Cheri and all around there.

The story goes like this.

When Paria Caca was already a full-grown person, he went to Huallallo Caruincho's dwelling, to the place called Upper Paria Caca.

76 In the valley that lies below Huaró Cheri there once was a village named Huauqui Usa, a village of the Yunca.

On that occasion the villagers¹³⁹ were celebrating an important festival. They drank, and drank hard.

While they were drinking, Paria Caca arrived at the village. He sat down at the end of the banquet as he arrived, just like a friendless stranger.

¹³⁷. The chapter opens with two sentences in repositive validation.

¹³⁸. This and the following three sentences form an explanatory aside with witness validation.

¹³⁹. *llactayoc runacunaca* 'villagers', more literally, 'the village-owning people' (i.e., the aborigines who lived in union with the place and its deities before Paria Caca and his devotees overran them).

77 Not a single one of the villagers offered him a drink while he sat there. He was there all day long. Finally a woman, who was also a native of that village, exclaimed,

"Oh, no! How come no one is offering this poor fellow a drink?"

She brought over some maize beer in a large white gourd and gave it to him.

78 "Sister," Paria Caca said to that woman, "it's a lucky thing for you that you offered me this beer. Five days from now, you'll see something awful happen in this village. So take care not to be in the village that day. Back off far away. Otherwise I might kill both you and your children by mistake. These people have made me damn mad!"

And he added, "As for these people, don't let them hear even a single word about it. If you let them hear anything, I might kill you, too."

79 Five days later the woman, together with her children and her brothers, did go away from that village.

But the people of the village went right on drinking without a care.

Then Paria Caca climbed the mountain that overlooks Huaró Cheri.

(That mountain is called Matao Coto now.

Farther down there's another mountain called Puypu Huana, the one we descend on our way from here to Huaró Cheri. These are the names of those mountains.)¹⁴⁰

80 On the mountain Paria Caca started a torrential rainstorm.

¹⁴⁰. The whole parenthesis has witness validation.

Rising up as yellow hail and red hail,¹⁴¹ he washed all those people away to the ocean and didn't spare a single one.

At that moment, the waters gushed down in a mudslide¹⁴² and shaped the high slopes and the valleys of Huarro Cheri.

When Paria Caca finished all these things, he didn't explain them to the rest of the aboriginal Yunca people, who'd <crossed out:> [quite clearly] seen it all happen without knowing or understanding what it meant, but instead headed to the fields of the Cupara, which are across the river. <margin, in Quechua:> [Paria Caca crossed over to the village of the Cupara.]

- 81 The native people of Cupara village survived just by channeling some water from a spring to their fields, and they were suffering greatly for lack of water at that time.

(This spring flowed from a tall mountain that rises above San Lorenzo village.¹⁴³

This mountain is called Suna Caca today.)

At that time, they say,¹⁴⁴ it was just a big lake.

They used to irrigate their fields by channeling the water downhill to fill some small reservoirs.

- 82 In those days there was a native woman of that village named Chuqui Suso, a really beautiful woman.

This woman was weeping while she irrigated her maize plants because they were drying out so badly, and because her water supply was so very scarce.

When Paria Caca saw this, he obstructed the mouth of her little pond¹⁴⁵ with his cloak.

141. In the *Tratado* Avila mentions that Huarochiri people interpreted a local geological formation, seemingly a steep alluvial fan of yellowish-white stones, as the remnant of Paria Caca's hail (Arguedas and Duviols 1966: 215).

142. *yaco lloclla purispas* 'waters gushed down in a mudslide': a typical west Andean disaster then and now. Repeatedly in the manuscript the rainy power of the heights destroys the dry Yunca people by washing them out. The topography of western Peru, cut by many water-eroded canyons, was read as the record of such mythic cataclysms.

143. Modern San Lorenzo de Quinti, 2 km east of Huarochiri at 2,550 m above sea level (IGM 1970–1971). This and the following sentence form an aside with witness validation.

144. 'They say' supplied to indicate resumption of reportive validation.

145. *cochap siminta* 'the mouth of her . . . pond': a literal translation, probably meaning the sluice through

- 83 The woman started to cry even more bitterly when she saw him do that.

"Sister, why are you crying so hard?" Paria Caca asked her.

"Sir, this little maize field of mine is drying up on me for lack of water!" she replied.

"Don't worry about it," Paria Caca said to her. "I'll make water flow from this pond of yours, plenty of water. But first, let me sleep with you."

- 84 "Get the water flowing first," she retorted. "When my field is watered, then by all means let's sleep together."

"Fine!" said Paria Caca, and released an ample amount of water.

Overjoyed, the woman thoroughly watered all her fields.

After she finished irrigating, Paria Caca said, "Let's sleep together."

"Not right now," she replied. "Let's sleep together tomorrow or the day after."

Paria Caca, who desired the woman ardently, thought, "I wish I could sleep with her right now!" and promised her all kinds of things.

"I'll fix this field of yours up with a water source direct from the river,"¹⁴⁶ he said.

- 85 "Do that first, and then we'll sleep together," the woman replied.

"All right," Paria Caca said. He widened an irrigation canal that had belonged to the Yunca people, a little ditch that descended long ago from the ravine called Coco Challa to the small hill overlooking San Lorenzo. He extended this canal down as far as the fields of Lower Cupara.¹⁴⁷

- 86 Pumas, foxes, snakes, and all kinds of birds cleaned and fixed that canal.

Pumas, jaguars, and all kinds of animals¹⁴⁸ vied with each other to improve it, saying, "Who'll be the leader when we lay out the watercourse?"¹⁴⁹

which water passed from the reservoir to the irrigation canal.

146. *mayomanta yacuyuctam* 'with a water source direct from the river' (i.e., not reliant on the spring or the reservoir system).

147. The teller is at pains to relate the extant pattern of canals with *huacas* and thereby express the teller's group's claims to water rights. In this myth a non-Yunca group (Checa?) seems to be holding that the neighboring Cupara (seemingly of Yunca origin) owe their water to the invaders and not to the ancient Yunca builders.

148. 'Animals' supplied.

149. This sentence has witness validation; since it

"Me first! Me first!" exclaimed this one and that one.

The fox won, saying, "I'm the chief, the *curaca*,¹⁵⁰ so I'll lead the way first."

And so he, the fox, went on ahead.

- 87 While the fox was leading the way,
<margin, in Quechua:> [leading the way],
after he'd laid the watercourse out halfway up the
mountain over San Lorenzo, a tinamou¹⁵¹ suddenly
darted up, whistling "Pisc pisc!"

Startled, the fox yelped "Huac!" and fell down
the slope.

Then those animals got indignant and had the
snake direct the way.

If the fox hadn't fallen, that canal of theirs
would've run at a higher level.

But now it runs somewhat lower.

The spot from which the fox fell is clearly visible
to this day. In fact the water flows down the course
the fox's fall opened.¹⁵²

overlaps the preceding reportive sentence in content, one
suspects an imperfect joining of two sources.

150. *curaca* means "the lord or ruler (*señor*) of the
community (*pueblo*)" (González Holguín [1608] 1952:
57); it derives from a root denoting priority in rank (espe-
cially birth order), not sovereignty. Under Spanish colo-
nial influence, *curaca* roles were modified toward Span-
ish ideas of nobility and estate-based privilege.

151. *yutu* 'tinamou': *yutu* is the bird Peruvians call
perdiz 'partridge' in Spanish. Its shape and behavior re-
semble those of a partridge, but it is in fact a tinamou.
Three species inhabit Lima Province. Of these, the likeli-
est (because it inhabits the middle altitudes that are the
scene of this myth) is: "*Andean Tinamou*, *Nothoprocta*
pentlandii oustaleti (*Perdiz serrana*). A tinamou the size
of a small chicken; upper parts brownish, finely marked
with cinnamon and black, with longitudinal buffy white
streaks, underparts buffy, breast gray with small light
spots. Lives in the steppes of the Andean slopes up to an
altitude of 3500 m., also on the coastal hills. A terrestrial
bird, it flushes with noisy wingbeats . . ." (Koeppcke
1970: 16).

152. This interpolated myth is an etiological story ex-

- 88 When in fact¹⁵³ he'd finished all this, Paria Caca
said to Chuqui Suso, "Let's sleep together!"

"Let's climb to a high ledge. There we'll sleep
together," she <crossed out:> [enticed him] an-
swered him.

(Today, this ledge is called Yana Caca.)¹⁵⁴

There the two of them did sleep together.

Once she'd slept with him, that woman said,
"Let's just the two of us go off someplace."

"Let's go!" he replied and led her to the mouth of
the canal called Coco Challa.

- 89 When they got there the woman named Chuqui
Suso said, "Right in this canal of mine, that's where
I'll stay!" And she froze stock still, and turned to
stone.

Paria Caca left her there and went on climbing
upward.

We'll tell about that next.¹⁵⁵

- 90 Someone congealed into stone does in fact stand
today at the mouth of the canal named Coco
Challa. It's the woman called Chuqui Suso.
<margin, in Quechua:> [Cuni Raya's dwelling is
near Chuqui Suso.]

Cuni Raya, also frozen to stone, dwells today
above this place in a different canal, at the spot that
was named Vincompa at that time.

It was there that Cuni Raya came to his end.¹⁵⁶

But we'll tell about the various things he did in
some later chapters.

plaining a conspicuous quirk of Quinti village's water
system: why does a certain canal deviate downward from
a higher and seemingly optimal course?

153. 'In fact' supplied to indicate that this sentence
has witness validation.

154. This parenthesis has witness validation.

155. This sentence and the remainder of the chapter
have witness validation, hence 'in fact' supplied in the
next sentence.

156. The speaker insists with peculiar emphasis on
the spot where Cuni Raya's course ended, perhaps be-
cause this version clashes with the better-known myth of
his disappearance over the sea. This latter version is itself
acknowledged, but crossed out, in chapter 2 (sec. 25).

CHAPTER 7

91

How Those Cupara People Revere the One Called Chuqui Suso Even to This Day

All the Cupara people, as we know,¹⁵⁷ make up a single *ayllu* called Cupara.

These people now live in San Lorenzo, where they remain forcibly relocated¹⁵⁸ right up to now.

There is within this *ayllu* a patrilineage¹⁵⁹ that bears the name Chauincho.

Chuqui Suso was <crossed out:> [a woman¹⁶⁰ of] a member of the Chauincho *ayllu*.

In the old days, in the month of May when the canal had to be cleaned (as is done today, too),¹⁶¹ all these people went to the woman Chuqui Suso's dwelling; they went with their maize beer, *ticti*,¹⁶²

guinea pigs,¹⁶³ and llamas to worship that demon woman.¹⁶⁴

92 In worshiping her, they built a *quishuar*¹⁶⁵ enclosure and stayed inside it for five days without ever letting people walk outside.

It's said that¹⁶⁶ when they finished that, and accomplished everything else including their canal-cleaning, the people came home dancing and sing-

157. 'As we know' supplied to indicate witness validation, which continues to predominate, with three interruptions, throughout the chapter. Because this chapter consists primarily of what appears to be a witness testimony by the editor/redactor, the three -*si* reportive passages are signaled in translation.

158. *reduzisca* 'forcibly relocated' (i.e., in San Lorenzo de Quinti). The Cupara are one of the *ayllus* that colonial authorities had relocated (probably in the 1580s) in Spanish-style parishes (*reducciones*). Among places mentioned in the manuscript, San Pedro Mama, San Francisco de Chaclla, San Damián de Checa, San Francisco de Siçicaya, and Santa María Jesús de Huarochirí were also Tole-dan *reducciones* rather than prehispanic *llactas* (Spalding 1984: flyleaf).

159. As noted in the introduction, the term *yumay* (literally, 'sperm') signifies a patrilineal group or corporation. See also chapter 31 (sec. 445).

160. Or 'a wife'.

161. In modern Andean villages the canal-cleaning festival, *yarq'a hasp'iy*, continues to be a ritual climax. A full account from the Huarochirí region is given by Paul Gelles (1984: 115–130 and *passim*).

162. *ticti*: a food-offering for *huacas* made from the thick maize residue left as a by-product of maize beer brewing.

163. The guinea pig, *Cavia porcellus* (also called *Cavia cobayo*), is native to the Andes and is raised in most rural Andean kitchens for festive or sacrificial food.

164. *supay huarmicta* 'demon woman': clergymen consistently used *supay* to translate the Christian concept 'demon', and in the manuscript *supay* sometimes seems to be used in this sense. But the word may retain a nuance of its older Andean sense, which is the shade or light, volatile part of a living being (Duviols 1978).

165. *quishuar*: a small tree whose wood was prominently used in ritual context. "*Buddleia* sp. *Quishuar* and its variants. . . . The plants of this genus are shrubs or occasionally herbs, with opposite lanceolate leaves and four-lobed white, violet to purple flowers borne in heads, panicles, or spikes . . . grown in the temperate regions as ornamentals and for their wood, which is used in tool-making and cabinet work . . . the wood of *Buddleia incana* had symbolic meaning and was used ceremonially by the Incas . . . a pre-Columbian temple at Cuzco [was] known as Quishuar-Cancha, in which was kept a gold idol the size of a ten-year-old boy, . . . idols burned at the festivals of R'aimi [*sic*] were also made of the wood of *Buddleia longifolia*. A number of small branches . . . were found in a grave of the Classic Maranga Period at Vista Alegre . . ." (Towle 1961: 75–76).

166. 'It's said that' supplied to indicate reportive validation, which continues through the end of section 92.

ing. They'd lead one woman along in their midst, reverencing her as they did the *huaca*¹⁶⁷ and saying, "This is Chuqui Suso!"

- 93 As this woman arrived at their village, we'd see¹⁶⁸ some people awaiting her, laying out maize beer and other things and greeting her:

"This is Chuqui Suso!"

On that occasion they say¹⁶⁹ people celebrated a major festival, dancing and drinking all night long.

In fact that's why, when the late lord¹⁷⁰ Don Sebastián¹⁷¹ was still alive, during Corpus Christi and the other major Christian holy days, a woman used to proclaim,

"I am Chuqui Suso!"

and give maize beer from a large gold or silver jar with a large gourd¹⁷² to everyone in rank order, saying,

"This is our mother's beer!"

Then she would also hand out toasted maize from a large hollow gourd.

- 94 When they'd finished cleaning the canal, they

167. 'The *huaca*' supplied. Original has *payta yna* 'as her'.

168. 'We'd see' supplied to convey the witness validation of this sentence.

169. 'They say' supplied to indicate reportive validation of this sentence.

170. *apo* 'lord': while Spanish speakers commonly knew this honorific, it did not belong to the legal jargon of colonial authority (which typically used the titles *curaca* or *cacique*). It is more suggestive of traditional legitimacy and connotes both religious and political authority.

171. Possibly the same Sebastián mentioned in chapter 19 (sec. 230) as an earlier *curaca*. Both passages could refer to Sebastián Quispe Ninavilca. He was the son of the man who had ruled Huarochiri before the Spanish conquest under the name Ninavilca and continued to rule after it as Don Antonio. Sebastián enjoyed Spanish favor, helped Dávila Brizeño organize forced resettlement of natives, and supported the Jesuit missions of the 1570s. He was rewarded in the 1580s with an office as a high native magistrate (Spalding 1984: 222). Here we are told (perhaps with malice) that despite such activities he also favored the *huacas*.

172. *poto* 'gourd': conjectural translation. In some regions of the Andes today, women serve maize beer ritually by doling out liquid from a large pail with a smaller gourd cup.

reportedly¹⁷³ used to invite a tremendous lot of people and give them maize, beans, and other things.

Since they always used to give things away like that, people from Huarochiri and from all the other communities used to go there. "They've cleaned Chuqui Suso's canal. Come on, let's go have a look!" they'd say.

- 95 In fact¹⁷⁴ today people who are in the know¹⁷⁵ about these practices still do the same thing and perform the same rites when they clean the canals. Even now, no matter how people behave, neither the *alcalde*¹⁷⁶ nor anybody else would ever try to stop them by asking, "Why do you do these things?"

On the contrary, they dance and drink right along with them until they get drunk. And as for the Catholic priest, they fool him, saying, "Padre, I'm back from cleaning the canal, so I'm going to dance, I'm going to drink."

As far as that goes, all the people do the same thing.

True, some don't do it anymore because they have a good padre.¹⁷⁷

But others go on living like this in secret up to the present.

173. 'Reportedly' supplied to indicate reportive validation, which continues throughout section 94.

174. 'In fact' supplied to indicate resumption of witness validation, which continues through the end of the chapter.

175. *musiasca* 'in the know' (also translated 'privy to'): this locution is used in several parts of the manuscript to designate those involved in Andean worship. Taylor (1987b: 143) gives a different reading: 'confounded (by the demon)', based on the fact that this verb often denoted foreknowledge such as that gained by magical means.

176. *alcalde*: *alcaldías* were Spanish magistracies, of which certain ranks were assigned to natives for purposes of indirect rule. Higher-ranking native *alcaldes mayores* had province-level administrative duties (Espinoza Soriano 1960). But the ones alluded to here, in chapter 13 (sec. 173) and in supplement II (sec. 481), are probably village-level *alcaldes* of the sort appointed under Toledan ordinances of resettlement (Spalding 1984: 216–217). The Toledan viceroyalty intentionally gave them powers overlapping those of the *curaca* or native lord, encouraging them to prohibit traditional rites (like this one) that the native lord might be tempted to permit.

177. This politically prudent afterthought may reflect awareness that Father Avila would scrutinize the text.

CHAPTER 8

96

How Paria Caca Ascended. How One Man Came Back with His Child by Following Paria Caca's Commands, and, Finally, How He Struggled with Huallallo Caruincho

We've already told about Huallallo Caruincho's life.

But we didn't speak about his dwelling place, the place he made his shrine and community.¹⁷⁸

In ancient times, they say,¹⁷⁹ Huallallo Caruincho dwelled in the area of Upper Paria Caca.

We don't know for certain that dwelling's original name. We do know¹⁸⁰ that it's called Mullo Cocha lake¹⁸¹ today because, when Paria Caca defeated Huallallo, who was a burning fire, he turned the place into a lake to extinguish him.

97 It was on the location of Mullo Cocha lake that they say¹⁸² Huallallo's dwelling place stood.

At that time the whole region was completely Yunca.¹⁸³ When he lived there huge snakes, toucans, and all sorts of animals filled the land.

178. The first two sentences have witness validation.

179. 'They say' supplied to indicate reportive validation.

180. 'We do know' supplied to indicate witness validation, which continues throughout section 96.

181. The lake whose modern name is Mullucocha is 30 km by air east-northeast of Huarochiri in the barren heights, at 4,300 m above sea level (IGM 1970–1971). Mullo Cocha means 'Lake of Thorny Oyster Shell'. Sections 99–104 show why. Because the lake's name is well known in this form, we have deviated from the practice of presenting terms like *cocha* 'lake' or *urcu* 'mountain' in translation only.

182. 'They say' supplied to indicate reportive validation, which continues through the next sentence.

183. *yuncasapa* 'completely Yunca' or 'full of Yunca': from the following sentence, which tells us that sub-tropical animals of the coast then inhabited the extreme heights, we learn that this means ecologically as well as culturally *yunca*.

In fact things were just as we described in the first chapter,¹⁸⁴

<margin, in Spanish:> [1st chapter]
when we told how he ate people.

98 They say that¹⁸⁵ when Paria Caca set out to defeat Huallallo Caruincho, the five persons who composed him¹⁸⁶ whirled hunting *bolas*¹⁸⁷ at Ocsa Pata.¹⁸⁸

<margin, in Spanish:> [Ocsa Pata is next to Paria Caca.]

While they swung their *bolas*, that region got intensely cold, and hail fell upon the ground where he played.

184. 'In fact' supplied to indicate witness validation of this sentence. The reference is to chapter 1 (sec. 4).

185. 'They say that' supplied to indicate reportive validation.

186. *pihcantin*: 'five' plus the suffix *-ntin*, which denotes the combination of intrinsically related or fitted parts: 'the five of him together'. The best-known instance of *-ntin* is the Inca name for the Inca Empire, *Tauantín Suyu*, meaning 'the Fourfold Domain' (see chap. 17, secs. 213, 215; chap. 22, sec. 280; chap. 23, sec. 288).

187. *riwicorcan* 'whirled . . . *bolas*': the *riwi* is a native South American hunting weapon made by tying round stones together and hurling them at the legs of prey so that the thongs entangle and fell it.

188. The toponym *ocsa pata* means 'grassy ledge' and evokes the windswept panorama of the high grasslands. It may signify a place on modern Cerro Ocsa. "Ocsa Mountain might be the modern Ocsa Mountain, which is found to the southwest of Lake Piticocha, which is also found in the area of the deeds [i.e., of Paria Caca], although somewhat farther away" (Bonavia et al. 1984: 12). Modern maps (IGM 1970–1971) show a plateau and a ravine called Ocsa 10 km southwest of Mullucocha.

99 At that moment a man¹⁸⁹ came along weeping
<margin, in Spanish:> [Tell the part about the snake.]
and carrying one of his children.¹⁹⁰ He was also
bringing his thorny oyster shell,¹⁹¹ coca, and balls of
ticti, meaning to give them to Huallallo in a drink
offering.

"Son, where are you going crying like that?" one
of the Paria Cacas asked him.

<margin, in Spanish:> [Find out the names of
these 5 brothers.

The names of these five brothers are

Paria Caca
Churapa
Puncho
Paria Carco

We don't know the name of one of these five.)¹⁹²

"Father," he replied, "I'm taking this dear little
kid of mine as food to serve Huallallo."

"Son," replied the Paria Caca, "don't take
your little one there. Carry him back to your vil-
lage. Give me that thorny oyster shell of yours,
your coca, and your *ticti*, and then take your kid
right back.

100 "In five days you must come back here to see me
do combat with Huallallo Caruincho," Paria Caca
said. "If I overwhelm him with floods of water, you
must call out to me,

'Our father's beating him!'

But if he overpowers me with a blaze of fire, you
must call out to me,

189. Here there is an imperfectly legible Quechua
marginal note that Taylor (1987b: 146) renders 'This man
was Quinti'. If correct, the interpretation is important be-
cause it shows that the Quinti, a group associated with
the lineages of Paria Caca, were alleged to have ancestors
who worshiped a Yunca deity.

190. *huc churinta* 'one of his children': see chapter 1
(sec. 1), about how Huallallo ate one of every two babies
born. The weeping man was going to make his sacrifice.

191. *mullo*, the shell of the thorny oyster, *Spondylus*
princeps, or powders and beads made from it, was among
the commonest offerings to Andean deities and a major
cargo in prehispanic deepwater seafaring (see Marcos
1980; Murra 1975b; Paulsen 1974).

192. In section 101 there is a birth-order list that may
give general words meaning 'firstborn', 'secondborn', etc.,
rather than the personal names of Paria Caca's incarna-
tions or offspring. In chapter 9 (sec. 113) and chapter 12
(sec. 166) there appear separate lists of the apparently hu-
man sons of Paria Caca.

'The fighting's over!' "

The man got scared when Paria Caca said this,
and said, "Father, won't that Huallallo Caruincho
be enraged at me?"

101 "Let him get angry! He won't be able to do a
thing to you. And what's more I will bring people
into being, males under the care of Ami and Llata,¹⁹³
<margin, in Spanish:>

[Sons

Curaca or Ancacha the 1st
Chauca the 2^d
Llunco the 3^d
Sullca the 4th
Llata the 5th
Ami the 6th

Daughters

Paltacha or Cochucha the 1st
Cobapacha the 2^d
Ampuche the 3^d
Sullcacha the 4th
Ecancha the 5th
Anacha Añasi the 6th]

and females under that of Añasi; one as the male
and one as the female, that's how I will have them
live,"¹⁹⁴ replied Paria Caca. And while he was speak-

193. *Ami* and *Llata*: these poorly understood persons
reappear in chapter 11 (sec. 157). The phrasing *amiyoc*
... *llatayoc* ... *añasiyoc* 'possessors of Ami ... posses-
sors of Llata ... possessors of Añasi' suggests that these
persons are prototypes of a group that held Ami, Llata,
and Añasi as their *huacas* and protectors. While this de-
tail has not been resolved, the gist can be partly clarified.

This foretelling allusion, addressed to a prototypical
man of the group whose origin chapter 11 relates, seems
to mean, 'You are afraid now because you are powerless,
but I later will supply a kind of people to be subordinate
to you. The man will have *Ami* and *Llata* as his *huacas*
and the woman will have *Añasi*'. The prophecy comes
true in chapter 11, where the lastborn persona of Paria
Caca relieves the equally lastborn Checa of their power-
lessness by forcing some of the Yunca aborigines to sub-
ordinate themselves as the "little Amis and Llatas" of the
Checa.

Ami means sick from overeating; *llata*, 'naked' (Gon-
zález Holguín [1608] 1952: 24, 212). *Añasi* may relate to
añas 'skunk'. If they are Quechua, which is uncertain,
the names seem to suggest lowly attributes of babies: na-
kedness, nausea, smelliness. Babyhood may symbolize ju-
nior genealogical rank.

194. *hucta cari hucta huarmicta ynam camasac* 'one

ing, his breath came out of his mouth like bluish smoke.

<margin, in Spanish:> [It was a clear blue.]

When the man saw this, he got scared and handed over everything he'd brought.

The five men ate the thorny oyster shell, making it crunch with a "Cap cap" sound, and all the other offerings.

Then the man went back, carrying his child.

102 Five days later, he did return just as Paria Caca had told him to, thinking, "I'll go and witness it!"

<margin, in Quechua:> [Paria Caca's victory]

And five days after his prophecy, Paria Caca did begin fighting Huallallo Caruíncho.

The story is like this.

Paria Caca, since he was five persons, began to rain down from five directions.

That rain was yellow and red rain.

Then, flashing as lightning, he blazed out from five directions.

103 From early in the morning to the setting of the sun,¹⁹⁵ Huallallo Caruíncho flamed up in the form of a giant fire reaching almost to the heavens, never letting himself be extinguished.

And¹⁹⁶ the waters, the rains of Paria Caca, rushed down toward Ura Cocha, the lower lake.¹⁹⁷

Since it wouldn't have fit in,¹⁹⁸ one of Paria Caca's five selves, the one called Llacsa Churapa, knocked down a mountain and dammed the waters from below.

104 Once he impounded these waters they formed a lake.

as the male and one as the female, that's how I will have them live': may mean that the Ami/Llata and Añasi groups, respectively, have male and female identity with regard to each other.

195. *ña hora pachacama* 'to the setting of the sun': an alternative translation would be 'to lower Pacha Camac'. Both possibilities are problematic, but 'Pacha Camac' more so since it is normally spelled with final *c* in the manuscript.

196. There is a crossed-out phrase, *paria cacap huquinca*, of uncertain meaning.

197. *hura cochañicman*: 'lower lake' or alternatively 'Pacific Ocean', accepting the 'Pacha Camac' reading would warrant the latter.

198. *manatac yaucuptin* 'since it wouldn't have fit in': a problematic passage. It may mean that in order to prevent the ocean from overspilling its shores (see chap. 3; chap. 29, sec. 375), Llacsa Churapa built a reservoir for Paria Caca's water. 'Paria Caca's five selves' supplied.

(Nowadays this lake is called Mullo Cocha.)¹⁹⁹

As the waters filled the lake they almost submerged that burning fire.

And Paria Caca kept flashing lightning bolts at him, never letting him rest.

Finally Huallallo Caruíncho fled toward the low country, the Antis.²⁰⁰

105 Another of Paria Caca's offspring

<margin, in Spanish:> [Find out if these are brothers since it's said that they came out of the eggs, or if they're the Paria Caca's children.—They were brothers.]

chased after him.

He stays at the pass down to the lowlands, the Antis, until today, "Lest Huallallo Caruíncho return," as he says.

His name was <crossed out:> [Sullca Yllapa] Paria Carco.²⁰¹

106 During Paria Caca's victory, a certain woman named Mana Ñamca²⁰² appeared, a demon who'd accompanied Huallallo Caruíncho.²⁰³

This woman lived below Mama,²⁰⁴ somewhere down there.

It was to conquer her that Paria Caca came to her.

Mana Ñamca also burned in the form of a fire.

199. Dávila Brizneño ([1586] 1965: 161) thought this story represented a combat between a volcano (*sierra del fuego*) and a snowcap, with Mullo Cocha the caldera left by the volcano's collapse. (It does not appear geologically to be a caldera.) This parenthesis has witness validation.

200. Taylor (1987b: 154) at this point refers to a Quechua marginal note that means, 'He didn't just flee instantly. We'll tell about it later on'.

201. This sentence has witness validation.

202. Mana Ñamca figures again in chapter 10 (sec. 143), where she is equated to Chaupi Ñamca, who in turn is equated to the daughter of Tamta Ñamca (chap. 5, sec. 47). This cluster of three female names seems associated with Yunca aborigines and with the remote past.

203. *caruinchouan cac supay* 'a demon who'd accompanied Huallallo Caruíncho': more literally, 'who was with Caruíncho'. This could mean Mana Ñamca was with him as sibling, or spouse, or ally. A marginal note to a later passage (chap. 10, sec. 143) interprets her as Chaupi Ñamca, perhaps meaning Mana Ñamca was a synonym or component of Chaupi Ñamca once matched to Huallallo as Chaupi Ñamca herself was later fraternally matched to Paria Caca.

204. Probably San Pedro de Mama (modern Ricardo Palma), 52 km northwest of Huarochirí, close to Lima in the lower Rímac valley (IGM 1970–1971).

Making an entry down through Tumna,²⁰⁵ Paria Caca attacked her.

She shot²⁰⁶ from below and hit the foot of one of Paria Caca's offspring, the one named Chuqui Huampo.²⁰⁷

<margin, in Spanish:> [Find out what condition this one is in.]

Nonetheless, it was Paria Caca who won and expelled her into the ocean.²⁰⁸

107 After he defeated them, he went back to his child Chuqui Huampo, who sat there lame with a broken foot.

"I can't go back. I'll keep watch over that woman Mana Ñamca from right here, just in case she comes back," Chuqui Huampo said to him.

His father said, "Very well then," and made provisions to supply him with all his food.

108 He gave his command: "All the inhabitants of these two valleys must give coca to you first, before any of them may chew it. Only after you have chewed it shall the people chew coca from their

harvest. Also, the people are to slaughter a llama in your honor, one that is still childless, one that has never given birth. And you shall always eat its ear-tips²⁰⁹ and other such things first, before the rest may be eaten."

<margin, in Spanish:> [This place where <crossed out:> [Sullca Yllapa] Chuqui Huampo is below Tumna between Sisi Caya and Sucya. I have to see it and find out what it's called.]²¹⁰

109 People respected these sacred edicts, and in accordance with them all the coca producers from

Saci Caya,²¹¹
Chontay,²¹²
Chichima,²¹³
Mama,
Huayo Calla,
and Sucya Cancha²¹⁴

would bring coca to Chuqui Huampo first before all others.

They carry on the custom secretly to this day.

205. Modern Tumna is 15 km west-northwest of San Damián de Checa at 2,902 m above sea level, a long way downvalley from Mullo Cocha. It occupies the heights over the Rímac's left bank.

206. *chucamurcan* 'she shot': the verb more literally means 'she hurled' and is elsewhere used in connection with lance-throwing. Perhaps the idea here is that she hurled fire (Taylor 1987b: 157), but the injury she inflicted is a broken (*paquisca*) rather than burned foot, so some more solid weapon seems indicated. To avoid the problem we choose a less specific verb.

207. Taylor (1987b: 156) gives a Quechua marginal note meaning, 'He'll be the one with the disabled leg'.

208. *cochañicman*: 'ocean' or possibly 'lake'.

209. *rinrin chillpiscacta* 'ear tips': today herders slit small notches in the ears of llamas at *señalasqa* festivals,

as signs of ownership (Aranguren Paz 1975: 117). Perhaps a fragment of ear would then be the sacrifice mentioned.

210. Taylor (1987b: 158) interprets an imperfectly legible Quechua marginal note at this point as saying, 'We will speak of Capcahuanca later'. Capac Huanca is mentioned in chapter 25 (sec. 346).

211. Modern Sisicaya is about halfway up the Lurín valley from Pachacámac to San Damián (IGM 1970–1971). See chapter 11 (sec. 156).

212. Modern Chontay is in the Lurín valley slightly downriver from Sisicaya (IGM 1970–1971).

213. Modern Santa Inés de Chichima is near Chacacayo in the lower Rímac valley (IGM 1970–1971).

214. On basis of Sucya Villca identification (see chap. 20, sec. 242), possibly San Bartolomé, 40 km northwest of Huarochirí in the lower Rímac valley between Mama and Surco (IGM 1970–1971).

CHAPTER 9

110

How Paria Caca, Having Accomplished All This, Began to Ordain His Own Cult

Now indeed we've finished telling all these victories of his.

But we haven't spoken about how Huallallo Caruinocho later lived under Paria Caca's sentence.²¹⁵

After Paria Caca's victory, and after Huallallo had fled to the lowlands, the Antis,
<margin, in Spanish:> [Find out how this Caruinocho exists in the Andes now.]

Paria Caca passed sentence on Huallallo: "Because he fed on people, let him now eat dogs; and let the Huanca²¹⁶ people worship him."

111 When the Huanca worshiped him,²¹⁷ they'd propitiate him with dogs. And since he, their god, fed on dogs, they also ate them.

As a matter of fact, we speak of them as "dog-eating Huanca" to this day.²¹⁸

112 Just as we indicated in the first chapter and in

215. End of an introductory passage with witness validation.

216. The Huanca were a large ethnic group inhabiting the upper Mantaro valley in the central Peruvian highlands. The Huarochirí myth-tellers' belief that their *huaca* Huallallo once tyrannized west Andean peoples seems to indicate a further belief that Paria Caca and his people reversed an earlier Huanca penetration of the seaward valleys. There is an implied claim to have liberated the Yunca from the "dog-eating Huanca" and from the burden of human sacrifice. Recent works on the Huanca include D'Altroy (1987) and Espinoza Soriano (1971).

217. Julio C. Tello (1923: 510–549) observed what he thought to be a modern tradition maintaining Huallallo's mythology and cult.

218. The "Indian chronicler" Felipe Guaman Poma de Ayala also expresses disdain for the "dog-eating Guanacas" and their dog-eating deity Huallallo ([1615] 1980: 1:241, 271). 'As a matter of fact' supplied to indicate witness validation of this sentence.

subsequent ones, where we said that all those villages were full of Yunca,

<margin, in Spanish:> [Chapter 1]

all the inhabitants of Huarochiri Province and of the provinces of Chaclla²¹⁹ and Mama and of all the other villages were once full of Yunca.

Paria Caca,²²⁰ as we know,²²¹ drove these Yunca and all such Yunca groups down to the lowlands. "It will be my children who'll live in this region," he ordained.

113 All those who took part in conquering these groups are individually called Paria Caca's children.
<margin, in Quechua:> [Paria Caca's children]

"Each one of them is his child," people say.

Others deny it. In accord with their belief these say, "They were born from the seed of a wild plant."²²²

The victors' names are these, starting from the oldest one:

219. Modern San Antonio de Chaclla is 63 km northwest of Huarochirí (IGM 1970–1971). Spalding's map (1984: endpaper) shows San Francisco de Chaclla, a resettlement village of the 1580s, at a similar location. Taylor (1987b: 39) equates Chaclla with modern Santa Eulalia, adjacent to Mama.

220. 'Paria Caca' supplied.

221. 'As we know' supplied to indicate witness validation, which continues through the end of section 116. Taylor (1987b: 163) takes the *quinua* origin story to be typical of invading groups that had individually grafted their focal ancestors onto the descent of the pre-invasion *huaca*, Paria Caca, and thereby provided themselves with an alternative and discrepant origin story.

222. Allusion to an alternative myth of origin, developed in chapter 24 (secs. 302–303) and chapter 31 (sec. 389).

Choc Payco,
Chancha Runa,
Huari Runa,
Utco Chuco,
and Tutay Quiri with his brother Sasin Mari.

All these conquered the Yunca peoples.

- 114 According to them, one other child of Paria Caca likewise emerged from the earth.

His name was Pacha Chuyru.

We forgot this one's conquests in all the preceding chapters.

We'll set forth these matters in a later part.²²³

<margin, in Quechua:> [Further on we shall set forth Pacha Chuyru's victory.]

These whom we have mentioned defeated and drove out all the Yunca peoples.

- 115 These Yunca groups, all the Yunca, once they forgot their former god, began to worship Paria Caca.

The tradition about the Yunca is like this.

In this community of Checa²²⁴ lived the ones called Colli,²²⁵ building their settlements²²⁶ all over the communal territory. To relate all the Yunca settlements in the whole area would be very laborious.

So in what follows we shall choose only a few of them for our consideration, compiling all their customs, because all the Yunca shared one single way of life.

- 116 Paria Caca then established his dwelling on the heights, on the same territory where he had conquered, and began to lay down the rules²²⁷ for his worship.

223. But the manuscript does not in fact contain the promised account.

224. San Damián de Checa, a village formed by forced resettlement (*reducción*) during the 1580s, appears to be the residence of one or more of the text's informants. Modern San Damián is 22 km northwest of Huarochirí at 3,235 m above sea level (IGM 1970–1971).

225. Here and at other points the myths of the Checa tell of expelling Yunca and at the same time of Yunca groups' becoming integrated with the Checa (Rostrowski 1978: 31–44). The kindred organized around Paria Caca and Chaupi Namca expresses the purported resulting unity. This theme becomes particularly explicit in chapter 24.

226. *tiascancunacta* 'their settlements': the possessive marker is ambiguous; could mean settlements of the Colli or Checa.

227. *hunancharcan* 'lay down the rules': this word as

His law was one and the same law in all the villages.

The law we speak of was this: "We are all of one birth."²²⁸

<margin, in Spanish:> [This is taken to mean of one family.]

- 117 They say²²⁹ he gave a command to one particular person in each village: "Once every year you are to hold a paschal celebration reenacting my life."

He said, "As for their titles, the title of these people will be *huacasa* or *huacsa*."

"The *huacsa* will dance three times each year, bringing coca in enormous leather bags."

well as 'law' (*hunanchasca*) in the following sentences is derived from a verb that González Holguín ([1608] 1952: 355) glosses 'to make signals, to understand, to consider, to design or plan out'.

228. *huc yuric canchic* 'We are all of one birth' (i.e., sibling group).

The word *yuric*, which we take to mean 'birth group' does not mean the same as *yumay* 'patrilineage', or *ayllu* 'localized kindred'. González Holguín ([1608] 1952: 372) gives "yurini to be born, to come into being, for something to come forth with something or someone as its author . . . yurini . . . for a man or animal to be born." *Yuric* is an agentive form. See the section on *yuriy/yumay* in the introduction.

The point of Paria Caca's great judgment, the cornerstone of the ideological order expounded in subsequent chapters, is that:

(1) The dominant patrilineages of the region will be the descent groups self-identified as protégés of Paria Caca's selves and children.

(2) Yunca descent groups (of what sort remains unclear), once liberated from Huallallo, will be incorporated in the role of wives and wife-givers, and their major *huacas* as 'sisters' or 'wives' of male *huacas* from the Paria Caca kindred. They will be considered globally the progeny of Paria Caca's "sister" Chaupi Namca.

(3) Insofar as all the people of the region are "born" of unions between descendants of a brother and a sister, all are siblings at the apical level of kinship and religious reckoning.

Taylor and Urioste read the passage differently. Taylor in an early working took it to mean that "each of our communities is composed of a certain number of families" (1980: 77). He later translated it as "we all belong to different lineages" (1987b: 167). Urioste (1983: 63) reads it as alluding to a single lineage. Arguedas and Duviols (1966: 65) give "all of us, who are as one single son."

229. 'They say' supplied to indicate return to reproductive validation.

118 To first become a *huacsa*, people in fact²³⁰ perform a certain ritual.

It's like this: a man of the Caca Sica *ayllu* functions as officiant for these ceremonies. From early times these officiants were only one or two people, and, as for their title, it was *yanca*.²³¹
 <margin, in Spanish:> [The master is called *yanca*.]

The same title is used in all the villages.

This man observes the course of the sun
 <margin, in Spanish:> [That is, the shadow that the wall casts in the sun.]

from a wall constructed with perfect alignment.

When the rays of the sun touch this calibrated wall, he <crossed out:> [proclaimed] to the people, "Now we must go"; or if they don't, he'd say, "Tomorrow is the time."²³²

119 Following this command, people go to Paria Caca in order to worship.

In the old times they used to go to Paria Caca mountain itself.

But now they go from Checa to a mountain called Ynca Caya

<margin, in Spanish:> [The snowcap of Paria Caca is visible from this mountain.]
 to worship from there.

(This mountain rises over the ruined buildings of Purum Huasi and abuts on another mountain called Huallquiri.

It's on this mountain that all sorts of people, men and women alike, go to worship.)²³³

120 People run a race on their way to this mountain, in accordance with the *yanca*'s instructions, driving their llama bucks. The strongest ones even shoulder small llamas.²³⁴ They scramble upward, each thinking, "I mean to get to the summit first!"

230. 'In fact' supplied to convey witness validation, which continues through the next four sentences.

231. That is, the *yanca*, as priest entitled by heredity to supervise the rituals, establishes the new *huacsa*'s relation with the *huaca* he (or she?) is to embody.

232. That is, he observed a gnomon to determine the correct date. R. T. Zuidema has studied the use of gnomons in Incaic Cuzco (1981: 319–322). The past tense verb *villarca* 'he proclaimed' is inconsistent in tense with the adjacent verbs. Taylor's transcription (1987b: 170) gives *villancu*, in present tense and third person plural, which is more consistent.

233. This parenthesis has witness validation.

234. *ancha sinche runacuna huchoylla llamanhuanpas* 'the strongest ones even shoulder small llamas': 'shoulder' is supplied to make the more literal sense—'the strongest people with small llamas'—intelligible.

<margin, in Spanish:> [Which is where <Paria Caca> can be seen from.]

121 The first llama to arrive at the mountain top was much loved by Paria Caca.

In the old days Paria Caca himself used to give a name to this llama buck, proclaiming, "Let its name be thus!"

<margin, in Spanish:> [different names each time, of one sort or another, such as Yauri or Yllaca]
 And as for the first little llama to arrive, the *yanca* would display it and praise it before all eyes, announcing, "The bearer of this llama is very fortunate. Paria Caca loves him."

122 This time of worship, as we know,²³⁵ is called the Auquisna.

<margin, in Spanish:> [Auquisna 'for our father' or 'creator']²³⁶

Similarly the worship of Chaupi Ñamca is called the Chaycasna.

<margin, in Spanish:> [Chaycasna 'for our mother']²³⁷

But we'll explain the Chaycasna later.

Nowadays the Auquisna season <crossed out:> [falls] comes in the month of June or close to it. It either occurs close to <crossed out:> [Corpus Christi] the great pasch²³⁸ or actually coincides with it.

All the *huacsas*, who might be ten or even twenty, dance on this occasion.

This dance is not something their ancestors appropriated.²³⁹

235. 'As we know' supplied to indicate witness validation, which continues through the end of section 122.

236. In a Jaqi language, maybe Aymara.

237. In a Jaqi language, maybe Aymara.

238. Because Corpus roughly coincides with the dry-season climax of the Andean ritual calendar, it has consistently become in Andean eyes the "great" festival of Catholicism and an occasion for performing nominally forbidden Andean rites. But a 1609 Jesuit report studied in Taylor's article "Cultos y fiestas de la comunidad de San Damián" (1987a) gives April as the Auquisna season. In accord with this report we interpret the teller's editing out Corpus and substituting *aton pascua* 'the great pasch' as meaning that he thought Auquisna close to Easter, which usually falls in April.

239. *cay taquicoytas manatac yayancunap chapascan* 'This dance is not something their ancestors appropriated': problematic translation. González Holguín ([1608] 1952: 96) gives "thing appropriated" for *chapasca*. Perhaps this means that *huacsas*' right to dance, unlike other dancing privileges, was not among the rights seized

<margin, in Spanish>: [Find out about this sort of song and write it down for me on paper in the Quechua language, from what they say.]

- 123 The *huacas* reportedly²⁴⁰ perform this dance with absolutely no interruption.

If someone who stops dancing ever happens to die, people comment about him, "He died because of the fault he committed."

For that reason, they make little children or any other kind of people carry on the dance.²⁴¹ The people from Surco especially prefer to call on the Huayllas to dance in their stead.

- 124 If a Huayllas man is married to a native Surco village woman and performs these rituals, the members of that community don't take away his fields or anything else of his, even though he's an outsider. On the contrary, they respect him and help him.

What's more, when Huayllas people who live in Surco come to Sucya Cancha to trade coca, regardless of their standing they bargain, saying, "Give me a little extra, ma'am; I'm a *huacsa*."²⁴²

- 125 Nowadays, as we know,²⁴³ people perform this pasch by making it coincide with any of the major Christian paschal rites, and the people from Surco still excel over all the other communities.

On account of this dance, the Catholic priests in their villages exact collections²⁴⁴ of chickens, maize, and all sorts of other things. The people hand these things over more than cheerfully.

by invading ancestors from aborigines. Taylor follows another line, reading (1980: 79) *yayancuna* as "their *encomenderos*" (i.e., colonial Spanish tribute lords). The same translator gives "without their owners' being aware" in a later working (1987b: 175). Arguedas (Arguedas and Duviols 1966: 65) has "without vigilance by the [Catholic] priests."

240. 'Reportedly' supplied to indicate return to reporter validation.

241. Apparently, in order to keep the dance going when a dancer is exhausted.

242. This sentence has witness validation.

243. 'As we know' supplied to indicate witness validation, which continues through the narrative formula at the beginning of section 127.

244. *aguelando* 'collections': probably a variant of Spanish *agüinaldo*, meaning a holiday contribution or gift (traditionally, at Christmas or Epiphany). In colonial Peru the practice was expanded illegally into a form of tribute *de facto*.

- 126 The *huacas* dance likewise during Chaupi Ñamca's paschal festival.

This paschal festival sometimes comes close to Corpus Christi, and sometimes actually coincides with it.

In another chapter

<margin, in Quechua:> [We'll set forth Chaupi Ñamca's life in a different chapter later on.] we'll record Chaupi Ñamca's life, where she lived, and how people worshiped her.²⁴⁵ But now let's return to Paria Caca's story and to all the things people did during the season of his paschal festival.

- 127 The story that explains these events is like this.

On the eve of the day when they were to arrive at Paria Caca for worship, people whose kin, whether men or women, had died in the course of that year would wait all night long,²⁴⁶ saying, "Tomorrow we'll go and see our dead by Paria Caca's side!"²⁴⁷

- 128 They said regarding their deceased of the year, "Tomorrow is the day when we'll deliver them there."²⁴⁸

They offered the dead food and even fed them that night, and spread out the ingredients for their rituals.²⁴⁹ They said,

"Now I deliver them to Paria Caca forever.
They will never come back any more!"

And they worshiped with the sacrifice of a small llama, or, if they had no llamas, they'd bring coca in large skin bags.

- 129 As we know,²⁵⁰ they'd examine this llama's in-

245. The teller (or editor?) is at pains to remind the reader that the Chaupi Ñamca cult (chap. 10) and Paria Caca cult are inherently complementary, separated only for expository reasons.

246. A 1609 Jesuit report discussed by Taylor (1987a) explains that, on this occasion, the mourners would take their mummified dead to a certain cave, Chutinhuaque, dressed in gala clothes and carried on llama back. Mourners kept vigil weeping in the cave until the morning sacrifices.

247. This probably alludes to the custom of visiting the mummified ancestors; see chapter 28.

248. This may allude to the delivery of recently made mummies to their permanent shrine sites.

249. *ruranancunactapas* 'the ingredients for their rituals': -*na* suffix denotes potential and not preterite action. *Rurana* means 'to make or do', so the word means more literally 'their things to be done'.

250. 'As we know' supplied to indicate witness validation, which continues to the end of section 129.

nards. If the signs were favorable, the *yanca* would prophesy, "Everything is well." If not, he'd say, "It's bad. You've incurred a fault. Your dead relative has angered Paria Caca. Ask forgiveness for this transgression, lest that fault be charged to you as well."

130 After completing these rituals, the *yanca*s carried off the heads and loins of those llamas for themselves, no matter how many thousands there might be, declaring, "This is our fee!"

131 The *huacsas*, who'd dance on three occasions in any given year, would finish their term on that day.²⁵¹ In order to enter a new cycle, when the old dance round was about to come to an end, all the people came to the center in Llacsa Tambo,²⁵² and the Concha were in the plaza, too,²⁵³ carrying a macaw-wing display or the sort of thing known as *puypu*.²⁵⁴

They'd lay these items in the center, on the rock called Llacsa Tambo.

After they deposited these things, they stayed there all night long, in the place where a cross now stands, wondering, "Will I be well this year?"

132 The next day they went to all the villages, including Macacho hill, Chaucalla, and Quimquilla, and remained there until five days were up.

At the end of the fifth day, all the *huacsas* who'd collected coca in bags would dance.

At daybreak on the same day, in Llacsa Tambo, they used to worship the demon with their llamas or other possessions.

251. This sentence has witness validation, which continues up to 'they dance' in section 135.

252. This is the first passage about Llacsa Tambo, the ceremonial center of the Checa and reference point for much of the text. Llacsa Tambo was probably at or near modern Llaquistambo, a hamlet with numerous prehispanic structures 3 km northeast of San Damián (IGM 1970–1971). Its name (if Quechua) is partly intelligible. Arriaga ([1621] 1968: 45) gives the gloss: "Llacsa is a green color in the form of either powder or stone, like copper oxide." *Tambo* means a way-station. Alternatively, the name may allude to a verb *llacsay*, which González Holguín ([1608] 1952: 207) translates as 'to freeze the blood' with fear.

253. *conchacunapas pampampi* 'and the Concha were in the plaza, too': the point of this slightly awkward insertion seems to be that the Concha, although a separate village (functioning as the Checa's opposite in the *reducción* village), were seated in the Checa's ceremony.

254. *puypu* is explained in chapter 24 (sec. 333) as synonymous with *huacamaypac ricran* 'a macaw's wing'.

133 Those who are privy to these customs do the same in all the villages.

Nowadays, it's true, some have forgotten these practices.

But since it's just a few years²⁵⁵ since they've had Doctor Francisco de Avila, a good counselor and teacher, it may be that in their hearts they don't really believe. If they had another priest they might return to the old ways.

134 Some people, although they've become Christians, have done so only out of fear. "I'm afraid the priest or somebody else might find out how bad I've been," they think.²⁵⁶

Although they say the Rosary, they still carry some pretty *illa* amulet²⁵⁷ everywhere; although they themselves might not worship these native divinities, they contract some old people to worship in their stead. Lots of people live this way.

<margin, in Spanish, crossed out:> [n.b.]

135 As we said earlier, the Concha, too, worship during Paria Caca's season from that other mountain called Huaycho. Their *huacsas* do just the same as the Checa's own do, that is, they dance.

Likewise, the Suni Cancha also worship in the same manner during Paria Caca's season from that mountain called

<margin, in Spanish:> [n.b.]

< >.²⁵⁸

136 The residents of Santa Ana,²⁵⁹ those who live in

255. *cay pisi huatallarac* 'just a few years': an ambiguity in this phrase adds to the difficulty of dating the manuscript. If read 'scarcely one year' it would support the 1598 date that Arguedas and Duviols favored (1966: 235). But it could just as well mean 'these few years', allowing a later date and with it the chronologies c. 1608 that Urioste and Taylor both favor (Acosta 1987b: 596; Taylor 1987b: 15–16; see the section on the possible genesis of the text in the introduction).

256. *ñispas*: the common verb *ñiy* or *niy* can mean either 'say' or 'think, intend'.

257. *Illas* are small sacred objects, often figurines, that are felt to contain the fecundating essence of the good they represent. Archaeological examples are common. Ethnographic examples are discussed by Jorge Flores Ochoa (1977).

258. A space for the mountain's name was never filled in. Modern Sunicancha stands across a canyon from Conchaseca, both close to San Damián.

259. Modern Santa Ana de Chaucarima is 18 km west-northwest of Huarochirí at 3,492 m above sea level (IGM 1970–1971).

San Juan,²⁶⁰ and all the ones called Chauca Ricma, during Paria Caca's season, reportedly²⁶¹ worship from the mountain called Acu Sica, the one we descend on our way to the Apar Huayqui River.²⁶²

In fact²⁶³ they'd never let anything stop them from performing²⁶⁴ these rituals.

Some people make this festival coincide with the great pasch, Easter; others set it close to Pentecost <crossed out:> [and Corpus].

When it comes to celebrating it, the people in this village would be delighted if the priest were absent from town or went to Limac.²⁶⁵

This is a completely true account.

137 Regarding all these places on mountains for worship of Paria Caca, it was only later on, when the Spaniards had emerged and came to look into it, that they were established.

138 But, in the old times, they say²⁶⁶ all these people used to go to Paria Caca mountain itself. All the Yunca people²⁶⁷ from

Colli,
Carhuayllo,²⁶⁸
Ruri Cancho,²⁶⁹

260. San Juan de Lahuaytambo, seat of the 'Thousand' of Chaucarima (Taylor 1987b: 187). See note 457.

261. 'Reportedly' supplied to indicate reportive validation.

262. Apar Huayqui River: possibly the Mala or its tributary the Canchahuara, associated with a mountain named Ayarhuaque at its source (IGM 1970–1971).

263. 'In fact' supplied to indicate witness validation, which continues through the end of section 137.

264. *ruraypacca manam ancochanmancho* 'they'd never let anything stop them from performing': more literally, 'they'd not rest from doing it'. The phrase might allude to the people's tenacity in retaining pre-Christian rites, or might alternatively be taken to mean they are rigorous about the rule requiring continual dancing (chap. 9, sec. 123).

265. The name of the city of Lima is uniformly Limac in the manuscript.

266. 'They say' supplied to indicate shift to reportive validation.

267. The following locales making up this category are listed in groups. The first list covers the Rímac valley from the Pacific shore eastward into the highlands. Lurín and Mala valley villages follow.

268. Modern Carabayllo is north of the Chillón River within greater Lima (IGM 1970–1971).

269. Lurigancho, today an outlying neighborhood of Lima.

Latim,²⁷⁰
Huancho Huaylla,²⁷¹
Pariacha,²⁷²
Yañac,²⁷³
Chichima,²⁷⁴
Mama,²⁷⁵

and all the other Yunca from that river valley;

Also the Saci Caya,²⁷⁶ who, together with the Pacha Camac come from another river valley,²⁷⁷ and the Caringa and Chilca,²⁷⁸ and those people who live along the river that flows down from Huaro Cheri,²⁷⁹ namely, the Caranco²⁸⁰ and other Yunca groups who inhabit that river region, used to arrive at Mount Paria Caca itself, coming with their *ticti*, their coca, and other ritual gear.

139 When those who'd come to worship returned from Paria Caca, people in their villages, aware of their impending arrival, used to await them in a gathering to ask, "How is our father Paria Caca?"
"Is he still well?"
"Isn't he angry?"

Then they'd dance full of happiness until the end of the fifth day, or however many days was their custom.

140 Regarding this worship, it may be that the Yunca don't practice it anymore, or that not all the Yunca do. But they do perform it away from their own places.

When they don't do it people speculate, saying,

270. Ate, today an outlying neighborhood of Lima.

271. Huanchihuaylla, a neighborhood of Ate according to Taylor (1987b: 191).

272. Modern Pariachi is 67 km west of Huarochirí at 1,160 m above sea level (IGM 1970–1971). Taylor (1987b: 191) mentions an estate called Pariache.

273. Possibly Ñaña, a village in the lower Rímac valley slightly outside Lima.

274. Santa Rosa de Chichima (Taylor 1987b: 191) or the more prominent colonial village of Santa Inés de Chichima, both in the lower Rímac valley.

275. San Pedro de Mama, the modern town of Ricardo Palma.

276. Probably Sisicaya in the Lurín valley.

277. That is, the Lurín.

278. Probably the same groups mentioned in chapter 12 (sec. 171), inhabitants of the lower Mala. Modern Chilca is a coastal town slightly north of the mouth of the Mala River.

279. That is, the Mala River.

280. Caranco may have been at or near modern Calango, on the lower Mala River, 305 m above sea level. See also chapter 12 (secs. 170–171) and chapter 23 (sec. 285).

"It's because of that fault of theirs that the Yunca are becoming extinct."

281. *sallcacuna* 'the highlanders': no English word ('mountaineer', 'hillbilly', 'mountain man') catches the exact flavor of *sallcacuna*. *Sallca* means the *puna*, the seasonally rainy but generally dry and (at night) cold lands that cover huge expanses around 4,000 m above sea level. The word evokes the roughness of llama herders' lives up on these treeless slopes.

And the Yunca, speaking for themselves, say, "The highlanders²⁸¹ are getting along all right. It's because they carry on our old way of life that their people flourish so."²⁸²

282. This discussion probably concerns people's ideas, c. 1600, about the fact that the post-invasion epidemics had devastated the coastal native peoples much more than the highlanders (see Cook 1981: 253–254; Denevan 1976: 41).

CHAPTER 10

141

Who Chaupi Ñamca Was, Where She Dwells, and How She Arranged Her Cult

Now we've finished telling Paria Caca's life.

And now we'll tell who those children of his (the ones we mentioned in the ninth chapter) were, and then tell the things that each one did individually as well as how they collectively beat the Yunca out of these villages.

<margin note in Quechua:> [After this we'll set forth the victories of Paria Caca's children.]

Next we'll write about who Chaupi Ñamca was.²⁸³

- 142 They say²⁸⁴ that the one called Chaupi Ñamca was the daughter of a man in Anchi Cocha, a lord named Tamta Ñamca, and that she was the wife of the poor man named Huatya Curi.

In fact²⁸⁵ we told this story in the fifth chapter.

- 143 This woman had five sisters.

The first woman, Chaupi Ñamca, went to dwell in Lower Mama in accord with Paria Caca's instructions.

The woman known as Mana Ñamca²⁸⁶

283. End of an introductory passage with witness validation.

284. 'They say' supplied to indicate shift to reportive validation.

285. 'In fact' supplied to indicate witness validation of this sentence.

286. The next passages tell us that Mana Ñamca, who was earlier described as accompanying the defeated Huanca(?) deity Huallallo Caruincho (chap. 8, sec. 106), is now equated with Chaupi Ñamca. Chaupi Ñamca, Pacha Camac's wife [Dávila Brizeño [1586] 1965: 163], is pictured as Paria Caca's sister and female counterpart. Thus the apex of divine kinship is structured as a fraternal union between an ancient Yunca pantheon and a newly

<margin, in Spanish:> [Her name is Chaupi Ñamca or Mama Ñamca.]

went around saying, "I am a maker of people."²⁸⁷

Some people say about Chaupi Ñamca, "She was Paria Caca's sister."

And she herself used to say, "Paria Caca is my brother."

- 144 Chaupi Ñamca was frozen into a stone with five arms.²⁸⁸ In worshiping her, people would race each other to reach her, just as they did when they went racing to worship Paria Caca, racing along driving their llamas and other things.

They'd lead to her the very same llamas that went to Paria Caca.

Later on, when the Spaniards appeared on the scene, people hid Chaupi Ñamca, the five-armed stone, underground in Mama, near the Catholic priest's stable.

She's there to this day, inside the earth.

- 145 All the people called Chaupi Ñamca "Mother" when they spoke to her.

appeared male of the highlands, establishing a society that is 'one family' (chap. 9, sec. 116). This motif is expressed in human terms in chapter 5 (sec. 48), where Huatya Curi marries a Yunca woman who is also equated to Chaupi Ñamca.

287. More than one *huaca* has the epithet *runa camac*, here rendered loosely as 'maker of people' (Cuni Raya Vira Cocha in chap. 1, sec. 7; Chaupi Ñamca in chap. 13, sec. 172; Mira Huato and Llacsa Huato in chap. 13, sec. 179; Llocllay Huancupa in chap. 21, sec. 268). The premise is that different human groups receive their life-energy and specific powers from different *huacas*. The fuller meanings of *camac* are explored in the introduction.

288. Or 'wings'.

(That's why San Pedro is also called Mama now.)²⁸⁹

In the old days this woman used to travel around in human form and used to sin with²⁹⁰ the other *huacas*.

But she never used to praise any male by saying, "He's good!"

146 There was a certain male on the mountain that overlooks Mama, a *huaca* named Rucana Coto.²⁹¹

Men who had small cocks would implore Rucana Coto, thinking to themselves, "It'll get big."

One time he and his big cock satisfied Chaupi Ñamca deliciously.

Therefore she said, "Only this man, alone among all the other *huacas*, is a real man. I'll stay with this one forever." So she turned into stone and stayed forever in Mama.

147 Now we'll tell about the sisters of Chaupi Ñamca whom we mentioned.²⁹²

Chaupi Ñamca was the oldest of them all.

Her next sister was Llacsa Huato.

Her next-born sibling was Mira Huato.

The next one was called Urpay Huachac.

We don't know about the other one.²⁹³

In all they were five.

When people sought Chaupi Ñamca's advice on any matter, she'd respond, saying, "I'll go and talk it over with my sisters first."²⁹⁴

148 We know²⁹⁵ people schedule Chaupi Ñamca's

rites during the month of June, in such a way that they almost coincide with Corpus Christi.

When the *yanca*

<margin, in Quechua:> [*yanca*]

had made calculations from his solar observatory, people said, "They'll take place in so many days."

149 We already spoke in chapter nine about the *huacas*' annual dances.

However, regarding this dancing, we didn't clarify what kinds of dances they performed on the three occasions in a given year.

They celebrated Paria Caca's paschal festival on the first day of the period called Auquisna.

Next, they likewise danced during Chaupi Ñamca's time.

Finally, in the month of November, just about coinciding with the festival of San Andrés,²⁹⁶ they'd perform still another dance called Chanco.

Further on we'll describe this dance fully.²⁹⁷

150 But now we'll return to Chaupi Ñamca's paschal festival.

During her paschal festival the *huacas* would dance for five days carrying coca bags.

Other people, if they had llamas, would dance wearing puma skins; those who had no llamas danced just as they were.

About those who wore puma skins people said, "They're the prosperous ones."

This dance is called Huantay Cocha.

They also performed another dance named Ayñu.

151 They performed still another one called Casa Yaco.

They say that²⁹⁸ when they danced the Casa Yaco, Chaupi Ñamca rejoiced immensely, because in their dancing, they performed naked, some wearing only their jewelry, hiding their private parts with just a cotton breechclout.

"Chaupi Ñamca enjoys it no end when she sees our <crossed out:> [cocks] private parts!" they said as they danced naked.

After they danced this dance a very fertile season would follow.²⁹⁹

These are the rituals they performed during her paschal festival.³⁰⁰

289. The reference is to the resettlement village of San Pedro. This sentence has witness validation.

290. *vchalllicuc carcan* 'sinned with': a Christian-style euphemism. Chaupi Ñamca's mighty sexual appetite is not seen as sinful in the context of the myth that immediately follows, or in that of the sexy Casa Yaco dance (sec. 151) that honored her. A pervasive though never explicit metaphor seems to liken the ardent genitalia of the female *huacas* with the warm fertile valleys, much as the water-giving heights of the mountains are likened to males who fertilize them.

291. *Rucana Coto* 'Finger-shaped mountain' (Quechua and Aymara).

292. This sentence has witness validation.

293. Taylor (1987b: 198) signals a marginal note in Quechua, meaning, 'The other one was called Lluncuhuachac'.

294. This suggests that the five *huacas*' priests or priestesses deliberated collectively.

295. 'We know' supplied to indicate witness validation, which continues through the first sentence of section 151.

296. St. Andrew's Day is November 30.

297. The Chanco is the subject of chapter 11.

298. 'They say that' supplied to indicate shift to reportive validation.

299. This is probably the sort of festival Catholic priests had in mind when they complained that Andean rites included "carnal excesses."

300. Concluding sentence with witness validation.

CHAPTER I I

152

How People Danced the Chanco Dance. In Speaking of These Matters, We Shall Also Tell Who Tutay Quiri, the Child of Paria Caca, Was. The Story Is Like This

In the ninth chapter, we referred to Paria Caca's children by name.

But we didn't say anything about their individual lives.

Here and in what follows we'll tell about them together with the victories of one from among them: Tutay Quiri.³⁰¹

We mentioned that the ceremonial dancing in his season was the Chanco.

153 Tutay Quiri was Paria Caca's son. This is a fact.³⁰²

In early times, they say,³⁰³ the Checa were Quinti, the younger brothers of the Quinti.

The Quinti thoroughly despised the Checa because the Checa were born last.³⁰⁴

154 One day, Tutay Quiri spoke to them, saying,

301. A report dated 1611 tells how Fabián de Ayala destroyed the mummies of a sacred cave in Santiago de Tumna. Among the "ancient captains and valiant soldiers," he found "one called Tarayquiri [*sic*], who, although he died over 600 years ago, remains so intact in body, that it is amazing" (Arguedas and Duviols 1966: 252). This suggests that some of the *huacas* called children of Paria Caca were ancestor mummies.

302. End of an introductory passage with witness validation.

303. 'They say' supplied to indicate reportive validation.

304. Apparently segments of the patrilineages called *yumay* at any given level of inclusiveness were ranked according to the birth order of their respective apical ancestors. This is one of several narratives concerning how Tutay Quiri relieved the Checa of their lowly status as 'juniors' to the Quinti.

"Don't be sad, children, no matter what they say. Let them scorn you; in spite of it you, the Checa, will in future times have the title of *villca*. And as for those who belittle you, people will speak scornfully to them, saying,

'Little Quintis,
little bugs!'"

155 A few days later, after the brothers had talked it over among themselves, Tutay Quiri set out from Llacsá Tambo³⁰⁵ to conquer the Yunca.

When they heard this news the Yunca were scared stiff and immediately began to flee to the village known as Lower Colli.³⁰⁶

<margin, in Spanish:> [Colli without a forceful pronunciation]³⁰⁷

(The Colli are neighbors of the Carhuayllo.

It's a fact that³⁰⁸ to this day their dead are laid in the same house of the dead, in the old highland village.)³⁰⁹

305. *llacsá tambomanta yuncacunacta* could also mean 'the Yunca from Llacsá Tambo'.

306. Concerning the Yunca of Colli (i.e., Collique, near Lima), see chapter 9 (secs. 115, 138).

307. 'Forceful pronunciation': because in Quechua the vowel *o* only occurs adjacent to postvelar consonants, the reader might take the written *o* in *Colli* to imply that the value of *c* is postvelar ('forceful'). The note warns the reader that this is not so. Perhaps the word *Colli* is of non-Quechua derivation.

308. 'It's a fact that' added to indicate that this whole parenthesis has witness validation.

309. *aya wasipe* 'in the . . . house of the dead': a 1609 Jesuit report said the houses where mummified ancestors dwelled were "little towers, always square, (each) with a

156 Tutay Quiri descended down Sici Caya³¹⁰ ravine and also down the ravine of the Mama river,³¹¹ moving in the form of yellow rain and red rain.

The people, some of them,³¹² waited for him in their own lands and villages in order to pay him homage.

He didn't humiliate these worshipers.

On the contrary, he said to them, "Stay here; you shall come to recognize my father. Living henceforth, address the Checa as 'brothers' and say, 'We're their brothers, the youngest ones.'"

157 And in fact³¹³ to this day, just as he said, people who live in San Pedro Mama address the Checa, saying, "I'm your little Ami, your little Llata."

So, both the *allauca*³¹⁴ moiety and the *vichoc* moiety lived as brothers of the Checa.³¹⁵

door to the east" (Arguedas and Duviols 1966: 247). Ruins of this form, looted but full of human bones, are visible in the San Damián and Huarochirí areas. In this passage the narrator points out that Tutay Quiri's action explains why Yunca people who live on the outskirts of Lima have ancestors enshrined in the remote mountains.

310. This is very likely to be the same toponym as Saci Caya (chap. 8, sec. 109; chap. 9, sec. 138; chap. 13, sec. 176), equivalent to modern Sisicaya. The ravine is the entrenched course of the Lurín River.

311. That is, he moved down both the Lurín (Pacha Camac) and Rímac (Mama) valleys, which form two separate courses toward the Pacific.

312. *runacunapas huaquencia* 'the people, some of them': presumably meaning a remnant of Yunca stayed there and submitted to Tutay Quiri. Chapter 24 extensively explains these people's role. By incorporating them as his worshipers, Tutay Quiri supplied the Checa, the former *sullca* (junior) group relative to the Quinti, with a group that is junior to the Checa. This sentence and the first of section 157 fulfill a prophecy of Paria Caca in chapter 8 (sec. 101).

313. 'And in fact' supplied to indicate witness validation. This begins a witness-validated passage, continuing with one interruption to the end of section 164.

314. *Allauca*, the name of a certain village, can also mean 'right-bank moiety'. Hernández Príncipe uses the term in this sense and it is mentioned in the Cajatambo idolatry trials studied by Duviols (1986: 494). The reason for supposing it functions here as a moiety title is the juxtaposition with *vichoc*, which may be related to *ichoc*, 'left-bank', the customary moiety complement. Occasionally present in Huarochirí (Gentile Lafaille 1976: 27, 89, 98), *allauca/ichoc* oppositions are common in the northern part of Lima Department and in Ancash. The name of the location today called Alloca and called Allauca in the manuscript, 16 km south of Huarochirí in the Mala–San Lorenzo valley, 1,750 m above sea level

158 Every year, in the month of November, the Checa (that is, all the males) would go out from this village on a giant surround hunt, saying,

"We go in Tutay Quiri's steps,
We go in the path of his power."

159 On that occasion they used to ask for rain.

People said, "Now, in the Chanco season, the heavens will rain."

And following Tutay Quiri's track, all the *huacas* and the non-*huacas* alike left from here to conduct the hunt; they used to go and spend the night in a place called Mayani,³¹⁶ up above Tupi Cocha.³¹⁷

160 On that day, they would trap some guanacos, brocket deer, or other animals. Regardless of who did the actual catching, if the successful hunter happened to have a *huacsa* in his own *ayllu*, he'd give the animal to him first, so that he might perform the Ayñu dance displaying its tail. Those who didn't capture anything would likewise dance but performed only the Chanco.

161 On the next day, they used to leave Mayani for Tumna.

People, men and women alike, would gather together and wait for them in the place called Huasuc Tambo, saying, "Here comes Tutay Quiri!"

This Huasuc Tambo is where a few rocks stand in the center of the plaza of Tumna itself.

In the old days, they say, people used to go there and worship on that spot.³¹⁸

(IGM 1970–1971; see chap. 30), probably is not a moiety term. *Allauca ayllus* seem to exist in various settlements, and in the Huarochirí manuscript, too, *allauca* groups are often mentioned without moiety counterparts (chap. 20, sec. 240; chap. 22, sec. 282; chap. 24, secs. 304, 316–317, 323, 325, 332, 336; chap. 26, sec. 356; chap. 30, sec. 379, 385). In those cases the term seems to be an *ayllu* or *llacta*, not moiety, title.

315. This vaguely suggests, but does not explain, that these conquered Yunca became peacefully integrated as a pair of moieties jointly treated as fraternal to the Checa.

316. Mayani is the modern name of a high plateau 8 km west of Llaquistambo (Llacs Tambo?) at 4,200 m above sea level.

317. Modern Tupicocha village is 10 km west-northwest of San Damián at 3,605 m above sea level (IGM 1970–1971).

318. This sentence and the following one are validated with reportive *-si*, which is indicated with supplied 'they say', but the narration then returns to witness validation.

There, too, the Chauti³¹⁹ and the Huanri would likewise go to worship with their maize beer.

162 We know that³²⁰ on the next day, if they caught anything, no matter how few or many animals, the *huacsas* who'd captured them gladly proclaimed, "Now we'll have *maca*³²¹ tubers!" and returned rejoicing to spend the night, this time in Pacota.³²²

163 On the following day, they used to arrive back at Llacsá Tambo.

When the hunters were about to return, everyone who'd remained in the village, the old men and old women, and other people as well, would gather all together to await them with maize beer.

As they were arriving there, the waiting people would say, "They're coming in exhausted!" and pour maize beer all over the place,³²³ over the people and onto the ground.

319. A place named Chaute today exists 5 km south of San Bartolomé at 2,600 m above sea level (IGM 1970–1971).

320. 'We know that' supplied to indicate return to witness validation.

321. *maca*: *Lepidium*, of which various species are mentioned in botanical sources; a plant of the freezing heights, whose green parts are used medicinally. "The root is edible and is customarily cultivated in some parts of the high plateau, it is medicinal too" (Soukup 1970: 186). "*Maka* (K). *Lepidium meyenii* Desv. A species cultivated in some regions of the high plateau (3900 m.) . . . tubers: fresh, boiled, and mashed . . . are eaten by sterile women who want to become fertile" (Girault 1984: 218–219). In this context, too, it is apparently a symbol of fertility.

322. Modern Pacota is 7 km west-southwest of Llaquistambo (Llacsá Tambo?; IGM 1970–1971).

323. *yanca* 'all over the place': assuming this is the common adverb *yanca* whose range of meanings includes

They'd pour it out right at the very entrance gate of Llacsá Tambo.

164 The hunters who'd come up from the lowlands would in turn place chunks of meat on the mouths of their hosts' jugs.³²⁴

After finishing this, the whole crowd sat on the open ground and they began the dance called Ayñu. These events are called the Chanco.

When they danced the Chanco, the sky would say, "Now!" and the rain would pour down.

165 They say that³²⁵ at the house of the *yanca* called Ysqui Caya, there was a bush or something of the sort, and from that bush flowed abundant water during the Chanco festival.

If people saw this happen, they said, "This year will give a good harvest."

If a drought were coming the bush would be dry.

In that case, people used to say, "There'll be terrible suffering."

'freely', 'carelessly', 'without serious intent' (González Holguín [1608] 1952: 364). If it is the homonym meaning a class of priests, the sentence can also be read to mean that the priest did the pouring.

324. The hunters had finished a circuit from the heights of Mayani down to lower-lying Tumna and now back to their ceremonial center. The ceremony seems to symbolize the plenitude of varied Andean subsistence (Murra 1975a: 243–254). As well as uniting ecological levels it juxtaposes wild food—hunted meat—with beer, the cultivated and processed nourishment par excellence. The interrelationship of hunters and farmers is also highly elaborated in the dialectic of *huari* and *llacua*, a complex common in the Lima area, which envisions societies as antagonistic symbioses between two culturally different sorts of people (see Duviols 1973).

325. 'They say that' supplied to indicate shift to reportive *-si* validation, which continues to the end of the chapter.

CHAPTER 12

166

How Paria Caca's Children Undertook the Conquest of All the Yunca People

In the tenth chapter [*sic*], we already told the story about the victories of Paria Caca's children.

Likewise we mentioned that all those villages were once full of Yunca.

Now we'll speak about them³²⁶ as earlier mentioned:

Choc Payco
Chancha Runa
Huari Runa
Utco Chuco
Tutay Quiri
Sasin Mari
Pacha Chuyru³²⁷—

how they used to behave, and things like that.³²⁸

167 In ancient times these people we just mentioned, since they were all brothers to each other, traveled into battle together as one.

Because he was the oldest of them all, the one called Choc Payco traveled in high honor on a litter.

But Tutay Quiri was the strongest, excelling beyond the others.

Because of his strength, he was the one who first conquered the two river valleys mentioned above³²⁹ by setting his golden staff on a black mountain at the border of Pariacha³³⁰ called Unca Tupi.

326. 'Them': Paria Caca's offspring, not the Yunca.

327. Compare with the similar but not identical list in chapter 9 (sec. 113).

328. End of an introductory passage with witness validation.

329. See chapter 8 (sec. 108) and chapter 9 (sec. 138).

330. Pariachi is 67 km west of Huarochiri at 1,160 m above sea level, far down the Rímac valley (IGM 1970–1971). So this is probably not the same Capari Caya mentioned in chapter 31 (sec. 398).

168 Planting his staff as a curse on the Yunca, and saying, as if in disrespect for them, "The Yunca will extend to this district,"³³¹ he set it in place.

(That mountain where he set his staff is now called Unca Tupi Capari Caya.)³³²

169 His other brothers went ahead, climbing up on the old road by which we go from Tupi Cocha (that is, the one called the Quisqui Tambo road; the other is called Tumnacha). When they heard somebody say, "Tutay Quiri has already finished conquering everything," they turned back, from the spot from which we can see to the outskirts of Limac.³³³

331. Tutay Quiri's point being that, after the seaward advance of the children of Paria Caca, the new and smaller limit of Yunca country would be Unca Tupi. This passage is difficult. Taylor (1987b: 219) gives "[Tutay Quiri] said, 'if anyone, as if to curse the Yuncas, knocks down this staff and shows disrespect, the Yuncas will conquer this territory.' "

332. This parenthesis has witness validation.

333. Modern Tupicocha is 10 km west-northwest of San Damián at 3,605 m above sea level (IGM 1970–1971). Santiago de Tumna is 15 km west-northwest of San Damián at 2,902 m above sea level, and Tumnacha ('little Tumna') might be close to it. The syntax is confusing, and it is not certain whether the place-names Tumnacha and Quisqui Tambo refer to the routes or to the places from which the discouraged heroes turned back. The apparent meaning of this passage is that when the other brothers learned how far Tutay Quiri had advanced in the Rímac valley, they decided instead to advance down the Mala valley. The next lines seem to excuse the lesser advance achieved in the Mala lands, down toward "Caranco," by saying that although Tutay Quiri also led that campaign, he let a mid-altitude agricultural *huaca* similar to Chuqui Suso seduce him and detain the

They feared Tutay Quiri a lot because he was really powerful.

170 So they descended through the Huarero Cheri district toward the vicinity of Lower Caranco.³³⁴

Once more it was Tutay Quiri who led the way on the descent.

One of Chuqui Suso's sisters waited for him in her field thinking to beguile him by showing off her <crossed out:> [vagina] private parts³³⁵ and her breasts.

whole movement well short of "Caranco" and the coastal Chilca area.

334. See chapter 9 (sec. 138) and chapter 23 (sec. 285).

335. <racanta> *pincaynintapas* ' <crossed out:> [vagina] private parts': a plainspoken Quechua word has been replaced with a Quechua euphemism meaning more literally 'her shame'.

336. This concluding sentence and the marginal note

"Rest a while, sir, have a little sip of this maize beer and a taste of this *ticti*," she said.

171 At that moment, in that way, he fell behind.

When they saw him do that, his other brothers likewise stayed behind, carrying the conquest only as far as the place called Pacha Marca in Lower Allauca.

If this woman hadn't beguiled them, the Huarero Cheri and Quinti fields would now reach as far as Lower Caranco and Chilca.

Further on we'll write about their individual feats and everything they did.³³⁶

<margin, in Quechua:> [Further on we'll write about their individual feats.]

have witness validation. At this point Taylor (1987b: 220) transcribes a marginal note in Spanish meaning, 'Here we cease writing the lives of each of Pariacaca's children and what happened and we start on Chaupinamca'.

CHAPTER 13

Mama³³⁷

172

When the people of Mama are questioned today about the *huaca* Chaupi Ñamca, they tell a different story.

The story told by them is like this.³³⁸

They say that in very early times, there was a *huaca* called Hanan Maclla.³³⁹

Her husband was the Sun.

Their children were Paria Caca and Chaupi Ñamca.

Chaupi Ñamca was a great maker of people, that is, of women, and Paria Caca of men.³⁴⁰

173 Accordingly they, the Mama people, in order to celebrate her festival on the eve of Corpus Christi, used to bathe Chaupi Ñamca in a little maize beer.

Additionally, some of them laid out all sorts of offerings for her, and worshiped her with guinea

pigs or other such things, and all the people gathered together, both men and women, their *curaca* and their *alcalde*.

174 They used to stay there all night long, staying awake till dawn, drinking and getting drunk. They got real happy performing the dance called Ayllia, and danced that night drinking and getting drunk until dawn. <Crossed out in original:> [On the next day, Corpus Christi, saying, "It's our mother's festival!" their *curaca*, in full regalia,³⁴¹ and all the rest of the people]³⁴²

After that they went out to the fields and simply did nothing at all. They just got drunk, drinking and boozing away and saying, "It's our mother's festival!"

175 If somebody says, "How did you worship before the Spanish Vira Cochas appeared?" we know how³⁴³ they reply:

"People used to drink for five days in the month of June wearing their most splendid clothes. Later, for fear of the Spaniards, they worshiped on Corpus eve."

Chaupi Ñamca's sister (the second one, Chaupi Ñamca being the oldest) was named Casa Llacsa.

337. At this point the manuscript leaps to another area, centered on a lower and more seaward village than San Damián de Checa. Mama, modern Ricardo Palma, lies in the lower Rímac valley, where desert hills hem in a narrow irrigable belt. It appears to belong to the old Yunca heartland, and this may help explain the discrepancies between its cults and those of the Checa and Concha. Mama's prominence in the manuscript may be connected to the fact that a *curaca* from Mama, Hernando Paucar, was among Avila's most important early informants and victims [Avila [1645] 1918: 68–69], and also to the fact that Huarochiri-area highlanders sought to integrate some of its warm fields into their economy.

338. End of an introductory passage with witness validation.

339. *hanan maclla* 'high' or 'upper Maclla' suggests a celestial deity, as does her marriage to the sun.

340. Gender parallelism in religious institutions, as suggested by these phrases, is considered a major theme of pre-Incaic organization by Irene Silverblatt (1987: 20–39).

341. This phrase is an uncertain rendering of *calla-ñayoc* 'in possession of *callaña*', based on the dubious assumption that this is the same word as *collana* occurring in chapter 14 (sec. 194) and chapter 31 (sec. 409), where it refers to majestic garments or appearances. But if used in its wider sense, the phrase might mean 'with the leading people'.

342. Sentence fragment thus in original.

343. 'We know how' supplied to indicate witness validation, present in this sentence but not in the ensuing two sentences.

People also bathed her that evening, as well as her other sisters Urpay Huachac³⁴⁴ and Vichi Maclla.³⁴⁵

176 “Chaupi Ñamca was said to be made up of five persons,”³⁴⁶ the Checa say.³⁴⁷

Of these the eldest was Chaupi Ñamca, also called Cotacha or Paltacha.

Her second sister was named Llacsá Huato, the one we call Copacha.

They say³⁴⁸ Llacsá Huato dwells in Chillaco.

(Not long ago, when Don Diego Chauca Huaman, the *curaca* of Saci Caya, was still alive, and until Don Martín’s arrival,³⁴⁹ people from Chillaco together with some other people supposedly used to celebrate her festival.

About this festival, we aren’t sure in what month it took place.)³⁵⁰

177 Next, there was the one called Mira Huato, whom we call Ampuche or Ampuxi.³⁵¹

344. Urpay Huachac also appears in chapter 2 (sec. 25) as the mother of the girl *huaca* whom Cuni Raya Vira Cocha seduces.

345. Likely to be a complement to or relative of (or another name for?) Hanan Maclla (sec. 172). *Vichay* means ‘uphill, upslope’ (González Holguín [1608] 1952: 351).

346. Compare the ensuing list with the similar one in chapter 8 (sec. 101).

347. The sentence is witness-validated with *-mi* but the material in quotation marks is reportive, with *-si* (‘said to be’ supplied).

348. ‘They say’ supplied to indicate that this and the next sentence are reportive with *-si* in a context where witness validation predominates.

349. A 1588 *revisita* (tribute quota inspection; Archivo General de la Nación, Buenos Aires ms., 13-17-5-1) shows that Don Diego Chauca Huaman still held the office twenty years before the making of the manuscript. This helps date the period that the manuscript’s authors considered the heyday of pro-*huaca* colonial lords. “Don Martín” is probably his son, Martín Chauca Huaman, born in 1575 (Guaman Poma [1615] 1980: 3:1024). The aspiration of an anti-*huaca* scion to the office of a father who had protected *huacas* is a motif of chapter 20 (secs. 247–249). ‘Supposedly’ supplied to indicate reportive *-si* validation.

350. This sentence has witness validation.

351. One of the forms given in the original, *Ampuxi*, would probably have sounded like ‘Ampushi’ in English orthography if, as Cerrón Palomino holds, Spanish *x* retained the *sh* value at the time of writing (1976b: 207). But the data are not conclusive according to Urioste. This sentence and the following have witness validation.

Concerning this Mira Huato, we aren’t sure where she lived. But people say, “She lives with her sister Llacsá Huato.”

178 They say that³⁵² if people from this region, or Huaro Cheri people, or any other sort of people had a son or a daughter, a brother, a father, or any other relative who was ill, they’d go to these *huacas*’ shrine to consult them.

(Their priestess as of sixty years ago is still remembered; she was named Chumpi Ticlla. And not so long ago, when Don Diego³⁵³ was still alive, a woman named Luzía, a very elderly woman, was their priestess, a tough³⁵⁴ old lady. <crossed out:> [And maybe she’s still alive.]

179 When people invoked these two *huacas*, they used to pray, saying,

“Oh Llacsá Huato, Mira Huato, it is you who make people;

It is you indeed who know my sin, better even than Chaupi Ñamca.

Tell me, I beg: what have I done to make them ill?³⁵⁵ For what fault of mine do I live in suffering?”

180 This being the case, people concluded, “No doubt they dwell as two sisters together.”³⁵⁶

People came to honor these *huacas* all the more for the fact that Chaupi Ñamca wasn’t straight; she’d tell people any sort of stuff. Actually, she was a liar.

So people used to visit them, saying, “Let’s go and listen to our mothers Llacsá Huato and Mira

352. ‘They say that’ supplied to indicate reportive validation, which continues through the end of section 181.

353. That is, the same Don Diego Chauca Huaman mentioned in section 176.

354. *tacyasca* ‘tough’: derived from a verb whose main meanings are ‘to be firm, constant’. But since the speaker is unsure if the priestess is still alive, it is also possible that he is thinking of a less-than-robust person. A derivative of *tacyay* denotes a different kind of inflexibility: it means ‘to stiffen from illness’ (González Holguín [1608] 1952: 335–336).

355. *ymamantam huncuchicuni* ‘what have I done to make them ill?’: might also be read ‘to make myself ill’.

356. *yscaynin ñañantinhuantaccha* ‘no doubt . . . as two sisters together’: the suffix *-huan* ‘with’ is redundant for this reading, because *-ntin* alone signifies the union of parts. This fact leads Taylor (1987b: 231) to interpret the sentence as meaning that something else—the desired cure—is ‘with’ the sisters.

Huato. Whatever they advise about our faults, we'll carry it out exactly."

181 However, we know that even though people did worship them, they didn't celebrate their feast each year as they do³⁵⁷ Chaupi Ñamca's festival.

And although they did honor them, they in fact went mainly to have their presence noticed,³⁵⁸ saying, "I'll go" or "I'd rather not" according to their whim.

182 Next we'll talk about the *huaca* named Lluncho Huachac, the one we call Sullcacha or Sullca Paya. She was the fourth sister.

This *huaca* reportedly³⁵⁹ lived in the Canta³⁶⁰ area. But we don't really know. Maybe the Canta people worship her, or even those farther on past Canta.

183 Finally, the one we call Añasi or Aña Paya lived in the ocean.

(In fact some people say, "She's the one who was Caui Llaca."³⁶¹

Others say, "This is a different *huaca*. She lives on the seashore.")

Aña Paya³⁶² lives inside a cliff.

So she doesn't have a priest.

When people sought the advice of the *huaca* Urpay Huachac, they'd think it over carefully beforehand. For in speaking with her, they spoke face to face because the *huaca* had no *huacsa* priest.

357. Tense in original can be read as present, perhaps emphasizing continued colonial vitality of the Chaupi Ñamca cult. The fact that this sentence is witness-validated ('we know that' supplied) suggests either present or a not-too-remote past. Witness validation continues through the second sentence of section 182.

358. *musiachicuyllapacmi* 'to have their presence noticed': Taylor (1987b: 232) has *munachicuyllapacmi* 'when they felt like it', noting *musia-* as alternative reading. Witness validation is glossed 'in fact'.

359. 'Reportedly' supplied to indicate reportive validation, which continues through the first sentence of section 183.

360. Canta, an important colonial town, was in the upper Chillón valley at 2,837 m above sea level (IGM 1970–1971).

361. See chapter 2 (sec. 10). The point in question is whether Añasi was the same as Caui Llaca, who entered the sea and became lithified as an island, or a separate *huaca* who 'lives on the seashore'. This sentence and the next have witness validation ('in fact' supplied).

362. 'Aña Paya' supplied.

When they came back from visiting her, they said, "I've gone and spoken with her," and they used to fast for a whole year, abstaining from sinning with their wives.³⁶³

184 All of these *huacas* we've mentioned were named Ñamca, each one of them individually and also the sisters as a group.

When people who were worried about anything approached any one of them, in explaining their trouble to her they'd address her, saying, "Oh five Ñamcas!"

185 This is all we know about Chaupi Ñamca, Llacsá Huato, Mira Huato, Lluncho Huachac, and Urpay Huachac.³⁶⁴

In the old days, they say,³⁶⁵ these *huacas* would ask those who went to them, "Have you come on the advice of your own Con Churi,³⁶⁶ your father, or your elders?"

363. *mana huarminhuan huchallicuspa* 'abstaining from sinning with their wives': since sex under these conditions would only be sinful by the tenets of *huaca* worship, this instance of *huchalliy* may not be euphemistic or specifically colonial. This also applies to section 186.

364. This sentence has witness validation. The fact that this sentence contains an ending formula, while the chapter continues, suggests a transition to a different testimony at this point.

365. 'They say' supplied to indicate reportive validation.

366. What is Con Churi? See supplement I (sec. 462). Avila explains in the *Prefación* to his bilingual sermon book:

In all the said villages there were greater and lesser idols, and there is not an Indian family, even if but a single person remains of it, which lacks its particular *penate* god in the house, in such manner that, if they came from one, eight, or ten persons, these have an idol left to them by the person who preceded them. The most important person of each family guards this and he is the person who has the right of succession to the goods and the rest, in such a way, that to guard this idol is like having right of *patronazgo* [hereditary patronage] among us, passing with the inheritance, and when, by law of blood kinship, there is no one to whom it may be transmitted, the one who possesses it usually entrusts it to the person who seems to him most appropriate by reason of affinity, or his best friend, and when he has no one to leave it to, he takes it with him, if he can, to where his progenitor is buried, which would usually be in a cave, because he was

To those who answered “No,” the *huacas* would reply, “Go back, return, consult your Con Churi first.” And so people went back.

People were more than happy to obey their dicta. Some of them recovered completely, while others died no matter how fully they’d complied.

186 Only after this was done first would they answer their concerns:

“You have angered that person.”

“You have crossed this one.”

“You are an adulteress.”

“You have sinned with a woman on the feast of Paria Caca.”

They gave people advice, telling them all sorts of things:

“You are to bathe in the confluence of two streams.”

“You must sacrifice one of your llamas.”

187 Now we’ve heard what Chaupi Ñamca and her other sisters were like.

But the fact is that³⁶⁷ in each village, and even *ayllu* by *ayllu*, people give different versions, and different names, too. People from Mama say one thing and the Checa say another.

188 Some call Chaupi Ñamca Paria Caca’s sister.

Others say, “She was Tamta Ñamca’s daughter.” (We spoke earlier about Tamta Ñamca in the fifth chapter.)

Still others say, “She was the Sun’s daughter.” So it’s impossible to decide.

a prehispanic mummy, and there he leaves the said idol, and if he cannot take it there, he buries it in his house. This sort of idol has the general name of *cun churi* or *chanca*. (Arguedas and Duviols 1966: 255)

367. ‘The fact is that’ supplied to indicate that sections 187–188 have witness validation.

CHAPTER 14

189

<margin, in Spanish:> [n.b.]

In the first chapter we made some remarks about whether Cuni Raya's existence came before or after Paria Caca's.³⁶⁸

They say³⁶⁹ Cuni Raya Vira Cocha did exist from very ancient times. Paria Caca and all the other *huacas* used to revere him exceedingly.

In fact,³⁷⁰ some people even say, "Paria Caca is Cuni Raya's son."

Next we'll speak about one of Cuni Raya Vira Cocha's feats.³⁷¹

190 Just before the appearance of the Spaniards, it's said,³⁷² Cuni Raya headed toward Cuzco.

There he conversed with the Inca Huayna Capac:³⁷³ "Come, son, let's go to Titi Caca. There I will reveal to you who I am,"³⁷⁴ he said.

368. This sentence is written in large letters in the original, like the chapter titles. Its witness validation could make it a title, but it seems to function as an introductory remark.

369. 'They say' supplied to indicate reportive validation.

370. 'In fact' supplied to indicate that this sentence and the next have witness validation, except for the material in quotation marks, which has reportive ('called').

371. *puchucascanta* 'feats' is derived from a verb that implies reaching of an intrinsic completion: the completion of a task, payment of a debt, end of a cycle, and so forth (see chap. 3, sec. 29, where it refers to the ending of the world). So there is a suggestion that the events to come represent the unfolding of Cuni Raya Vira Cocha's purpose or will.

372. 'It's said' supplied to indicate reportive validation, which continues through the end of section 197.

373. Huayna Capac, the last leader of the Inca Empire before it was riven by dynastic warfare and then the Spanish invasion, ruled over an immense state at the height of its power. In various ways, most of the Quechua-speaking

191 And there he told him, "Inca, mobilize your people, so that we may send magicians and all sorts of shamans to Ura Ticsi, the world's lower foundations."³⁷⁵ As soon as he said this, the Inca promptly gave the order.

"I am a condor shaman!"³⁷⁶ some men answered.

writers c. 1600 saw him as touched by premonitions of the impending calamity. A myth told by the "Indian chronicler" Joan de Santa Cruz Pachacuti Yamqui, seemingly related to this one, tells how a mortal illness in the form of butterflies or moths in a box felled him on the eve of Spanish invasion ([1613] 1968: 311).

374. *ñocap cascayta* 'who I am': more literally, 'my past-being (direct object)'. The perfective *-sca* suggests *ex post facto* knowledge: that is, 'what I was all along without your knowing it'. This appears to allude to chapter 1 (sec. 7), and to purported Inca prayers, which often address Vira Cocha with petitions for knowledge of where and who he is. Pachacuti Yamqui affords an example ([1613] 1968: 287–288). A recent translation from a rectified text gives the sense as:

Oh Viracocha, . . .

Where are you?

May I not see you?

Are you above, are you below,

Is your throne nearby?

Please show yourself to me . . .

We your servants

With our eyes of light and shadow turned toward you,
We wish to see you . . . (Itier 1988: 571–572)

(For a different rendering, see Szemiński 1985b: 249.)

375. *hura ticsiman*: González Holguín glosses *ticci* ([1608] 1952: 340) as "origin, beginning, fundament, foundation, cause." Its sense here is not obvious. The 'lower foundations' may mean the underside of the world. Taylor (1980: 111) interprets it, with equal plausibility, as "lowlands."

376. *ñocam condorpac camasca canim* 'I am a condor

"I am a falcon shaman!" said others.

"I am one who flies³⁷⁷ in the form of a swift!"³⁷⁸ replied still others.

192 He³⁷⁹ instructed them, "Go to the world's lower foundations. Then tell my father, 'Your son sent me here. Send me back bearing one of his sisters.'"³⁸⁰

The man who was the swift's shaman, together with the other shamans, set out intending to return within five days.

193 The swift's shaman was the first to arrive there.

When he arrived and delivered his message, he was given something in a small chest and warned, "You mustn't open this. Lord Huayna Capac himself must be the first to open it."

While the man was bringing it, when he'd almost delivered it to Cuzco, he thought, "No! I'll take a look inside. What could it be?" And he opened it.

194 Inside it there appeared a very stately and beautiful lady. Her hair was like curly gold and she wore a majestic³⁸¹ costume, and in her whole aspect she looked very tiny.

shaman': more literally, 'I am the *camasca* of the condor', and so forth. The sense of *camasca* may be understood as the inverse of *camaque* (chap. 29, sec. 372): the latter means a power giving form and force to a specific class of beings, and the former the beings so favored. In context, the sense appears to be that the shaman acquires the species powers of his superhuman familiar.

377. The implication is that these shamans engage in magical flight, a common motif of South American shamanism.

378. The Lima area has three swift species. Of these, the likeliest is the Andean swift, because it is a sierran species that sometimes flies down to the coast like the shaman in the story. All swifts are fast fliers. "*Andean swift*, *Aeronautes andecolus* (*Vencejo andino*). Distinguished from the preceding species [i.e., the Chimney Swift, *Chaetura pelagica*] by its longer wings, forked tail, and lighter color; with the collar, belly and rump white. Abundant in the sierra and Andean slopes, coming down from time to time on the coast" (Koepcke 1970: 78).

379. While the grammatical subject of this sentence is ambiguous (Inca? or Cuni Raya Virá Cocha?), the fact that the 'sister' mentioned is later clarified as being the latter's suggests that the subject is more likely to be Cuni Raya Virá Cocha.

380. *huc panantas* 'one of his sisters': the original is ambiguous as to whether this means Cuni's or Inca's sister, but this is cleared up later (sec. 196) when Cuni Raya Virá Cocha calls her 'my sister'.

381. The little lady's clothes were *collana*, a term used in social organization to label high-ranking descent

The moment he saw her, the lady disappeared.

195 And so, deeply abashed, he arrived at the place called Titi Caca in Cuzco.

Huayna Capac said, "If it weren't for your being the swift's shaman, I'd have you executed right this instant! Get out! Go back by yourself!"

The swift's shaman returned and brought the woman back. When he was bringing her back along the road, dying for something to eat and drink, he had only to speak and a set table would instantly be there. It was just the same when he needed to sleep.

196 He delivered her exactly on the fifth day.

When he handed her over to them, Cuni Raya and the Inca received her overjoyed.

But before opening the chest, Cuni Raya said, "Inca! Let's draw a line across this world."³⁸² I'll go into this space and you go into this other space with my sister."

"You and I mustn't see each other anymore!" he said as he divided the world.

And he began to open the box. At the moment he opened it, the world lit up with lightning.

groups of Cuzco and elsewhere (Zuidema 1964: 100–103). It implies majesty and political eminence. But 'lady' translates a Spanish word in the manuscript: *señora*. This word, like her blondness, suggests that she is an image foreshadowing the Spanish. In Inca-era politics, acceptance of a gift bride signified political subjection to the giver. So the story may be a mythic comment on the loss of Inca sovereignty. Contrast with chapter 23 (sec. 300), where Maca Uisa conserves his autonomy by refusing gift brides.

382. *cay pachacta sequison* 'Let's draw a line across this world': *ceqqe* has the practical sense 'line, boundary, limit' (González Holguín [1608] 1952: 81) but was often used to mean a schematic line in ideal space. Rowe (1985) and Zuidema (1964) analyze what is known of the "lines" along which the Inca capital's *huacas* were arranged.

The line that Cuni Raya Virá Cocha impels the Inca to draw may allude to the moiety line of Cuzco, but more likely alludes to the alleged division of the Inca Empire into two at Huayna Capac's death. Betanzos ([1551] 1987: 210) relays an Inca tradition equating the former with the latter. This division is mentioned by many chroniclers as the cause of the Inca civil war, and indirectly of Pizarro's easy victory over Cuzco.

The translation of this passage depends greatly on interpretation of *pacha*. The most concrete reading would make it 'ground, earth', in which case the passage seems to concern something as local and earthly as a line drawn in the dirt. But it can just as well mean 'time and space', or 'world', which gives the passage a feeling of the vastest mythic scale.

197 The Inca Huayna Capac said, "I'll never again return from here. I'll stay right here with my princess, with my queen." To one man, a kinsman of his, he said, "You go in my stead.³⁸³ Return to Cuzco and say, 'I'm Huayna Capac!' "

At that very moment, then and there, the Inca disappeared forever with that lady of his, and Cuni Raya did the same.

Later on, after Huayna Capac had died, people scrambled for political power, each saying to the others,

"Me first!"

"Me first!"

It was while they were carrying on this way that the Spanish Vira Cochas³⁸⁴ appeared in Caxa Marca.

383. *ñocap rantij* 'in my stead' alludes to the well-attested Inca institution of naming a 'second person' to act in lieu of the Inca.

384. *vira cochacunapas*: in this passage and certain

198 Even up to the present we know³⁸⁵ many stories about Cuni Raya Vira Cocha's life.

We haven't yet finished writing down the other things he did while he was roaming through this area.

We'll treat these matters later on.³⁸⁶

later ones, as well as in the preface (sec. 1), 'Spanish' has been supplied to avoid confusion with the same name as applied to the deity. The use of this term to denominate the Spanish and privileged Spanish speakers survives in rural Cuzco Quechua to the present.

385. Original contains both *yachanchic* 'we know' and *-mi* witness validator. Witness validation continues to the end of the chapter.

386. Taylor (1987b: 250) shows a Spanish marginal note meaning, 'what chapter back?'

CHAPTER 15

199

Next We Shall Write about What Was Mentioned in the Second Chapter, Namely, Whether Cuni Raya Existed before or after Caruincho

Cuni Raya Vira Cocha is said to have³⁸⁷ existed from very ancient times. Before he was, there was nothing at all in this world. It was he who first gave shape and force to the mountains, the forests, the rivers, and all sorts of animals, and to the fields for humankind's subsistence as well.

It's for this reason that people in fact³⁸⁸ say of Cuni Raya, "He's called Paria Caca's father."³⁸⁹

387. 'Is said to have' supplied to indicate reportive validation.

388. 'In fact' supplied to indicate that the verb 'say' here and in the first sentence of section 200 has witness validation. The material in quotes has reportive validation ('called' supplied).

389. This short chapter implicitly addresses the question of whether Vira Cocha partakes (as early missionaries speculated, and later native writers affirmed) of the "true God" as seen through pagan intuition. If so, he

"It was he who made and empowered Paria Caca."

200 "If Paria Caca weren't his son, he probably would have humbled him," all the people say.

And it's said that³⁹⁰ he did thoroughly humble some villages with his cleverness, playing all sorts of tricks on them.

We'll include these matters³⁹¹ later.³⁹²

would be prior to all *huacas*, especially the archaic one par excellence, Huallallo Caruincho. The evidence that this chapter cites, however, is not actually relevant to that question. The chapter alludes only to testimony that Cuni Raya Vira Cocha preceded Paria Caca.

390. 'It's said that' supplied to indicate reportive validation.

391. Cuni Raya returns (not as Vira Cocha) in chapter 31 (sec. 409).

392. This sentence has witness validation.

CHAPTER 16

201

Here We Shall Write on Whether Paria Caca, Born from Five Eggs, Was Composed of Brothers or Whether Paria Caca Was Their Father, Things of This Kind

In chapter eight we already speculated on such matters as whether Paria Caca, when he was born from five eggs, was made up of brothers, or whether the others were Paria Caca's sons.

Now we'll write about them individually and by name.

- 202 As we suggested in the fourteenth chapter when we said they were sons of Cuni Raya, the Paria Cacas born from five eggs were brothers to each other. These are their names, starting from the first:

Paria Caca
then Churapa
then Puncho
then Paria Carco

We don't know the other one.

We leave a blank space here in order to write it once we ascertain it.

Sullca Yllapa.

<margin, in Quechua:> [n.b. His name was Sullca Yllapa.]³⁹³

- 203 They say³⁹⁴ Paria Carco dwells to this day at a pass into the Anti lowlands, saying, "Huallallo may return!"

In fact, we already pointed this out.³⁹⁵

393. The introductory passage that ends here is witness-validated with *-mi*, but the marginal note is reportive with *-si*.

394. 'They say' supplied to indicate reportive validation.

395. 'In fact' supplied to indicate witness validation. The reference is to chapter 8 (sec. 105).

But this Huallallo Caruincho isn't supposed to have³⁹⁶ just escaped all at once.

When Churapa, one of the Paria Cacas, penetrated the place we called Mullo Cocha³⁹⁷ and turned it into a lake, Huallallo flew away like a bird.

- 204 Then he entered a mountain, a mountain called Caqui Yoca.³⁹⁸

This <crossed out:> [cliff] mountain was a gigantic rocky escarpment.

Huallallo Caruincho got inside the cliff and hid there.

Paria Caca, in the form of lightning, blasted it again and again; he and his five brothers shot lightning bolts so violently they almost demolished that

396. 'Supposed to have' supplied to indicate reportive validation, which continues through the first sentence of section 209.

397. Mullo Cocha is the place where Paria Caca dislodged Huallallo (chap. 8, secs. 96–97, 104; chap. 16, sec. 203); it lies along the probable pilgrimage route to Paria Caca's great shrine on the icy heights. With its many mentions of geological formations in the environs of Mullo Cocha and the mythic events they embody, this chapter and chapter 17 (secs. 210–212) give the impression of being a pilgrim's reminiscence or guide to the sights of the Paria Caca pilgrimage route. The geological landmarks are taken as a series of three tropical monsters loosed by Huallallo and killed by Paria Caca.

398. This name and that of the canyon Caqui Yoca Huayqui (sec. 207) allude to the bird *caqui* (toucan?) that acts later in the myth (sec. 207; see note 401). Taylor (1987b: 259) suggests that both derive via "Aru deformation" from *caquiyo* 'having a *caqui*', perhaps in reference to the shape of a geological formation.

rocky mountain, and from there they once again forced Huallallo Caruincho to flee.

- 205 Then Huallallo Caruincho turned loose a huge snake called the Amaru,³⁹⁹ a two-headed snake, thinking, “This’ll bring misfortune on Paria Caca!”

When he saw it, Paria Caca furiously stabbed it in the middle of its back with his golden staff.

At that very moment, the snake froze stiff. It turned into stone.

- 206 This petrified snake, the Amaru, remains clearly visible to this day on the road named Upper Caqui Yoca.

People from Cuzco, and everyone else who knows about it, strike it with a rock and carry along the fallen chips as medicine, thinking, “Now I won’t catch any disease.”

- 207 As soon as Huallallo Caruincho fled from the cliff of Caqui Yoca, he entered a canyon called Caqui Yoca Huayqui.

Then, clambering up a mountain called Puma Rauca,⁴⁰⁰ Huallallo thought, “From here I’ll fence Paria Caca in so he can’t pass through.” He set

against him a certain kind of parrot called a *caqui* or toucan⁴⁰¹ and made it brandish its wing points.⁴⁰²

But Paria Caca effortlessly broke one of its wings, turned the toucan into stone, and climbed right over it.

Once Paria Caca stepped over it Huallallo Caruincho had no power left, so he fled toward the Anti lowlands.

- 208 But Paria Caca, with all the rest of his brothers, chased after him.

After Huallallo entered the Anti lowlands, Paria Caca left one of his brothers, the one named Paria Carco, at the pass into the tropical Antis. “Watch out lest he return!” he said.

- 209 Paria Carco

<margin, in Quechua:> [Paria Carco] remains there today in the form of a heavily snow-capped peak.

Who worships Huallallo is something we don’t know.⁴⁰³

But in the ninth chapter⁴⁰⁴ we already mentioned that Paria Caca declared, “Since he once ate people, let him now eat dogs. And let the Huanca people feed them to him.”

399. *amarocta* ‘Amaru’ (direct object): Amaru is the great mythic water serpent, virtually omnipresent in Andean myths, and usually symbolic of disorder erupting in the transition to a new order. It may have been visualized as resembling the boa constrictor (*Constrictor constrictor*) or anaconda (*Eunectes murinus*). This particular Amaru, Cristóbal de Albornoz ([1583?] 1984: 201) tells us, was a vein or stratum of white marble. The belief that certain white minerals are prophylactic medicine is widespread in the modern Andes.

400. “Pumarauca mountain, where Huallallo Carhuincho took refuge, still exists . . . and is located exactly in the zone adjacent [to Paria Caca] when one leaves from the great ravine of the Steps [i.e., the ‘Steps of Paria Caca’, an ancient roadway], en route to Jauja, which is also the direction toward the jungle” (Bonavia et al. 1984: 13). Modern maps (IGM 1970–1971) show a Pumarauca Mountain 2 km north of Mullucocha, with its peak 4,950 m above sea level.

401. *huc orito caque ñiscacta* ‘a certain kind of parrot called a *caqui* or toucan’ (direct object): as noted in chapter 1 (sec. 5), the exact meaning of *caqui* is uncertain and ‘toucan’ is a guess. We leave the word *caqui* visible in the translation here to reveal the salience of this bird’s name throughout the passage. Whatever its species, the *caqui* is a tropical bird that in reality would never be seen on the icy heights, which symbolizes the vanished power of the Yunca deity Huallallo.

402. *chuquirichispa* ‘made it brandish’: appears to derive from the verb that González Holguín ([1608] 1952: 122) gives as “*Chuquini* . . . to spear or strike spear blows.” The image here seems to be that of a bird with its wing feathers fanned out and bristling like lances. The episode seemingly comments on a jagged mountain wall taken to resemble a broken wing.

403. This sentence and the remainder of the chapter have witness validation.

404. Sections 110–111.

CHAPTER 17

210

Now we'll explain how Paria Caca returned after he left his brother Paria Carco at the pass into the Anti lowlands.⁴⁰⁵

The story is like this.

We've already spoken about some of the words that Paria Caca said, and also about what he instituted to establish his own cult.

But there's one story we forgot.

211 After he finished the conquest, they say,⁴⁰⁶ he returned with his other brothers to Paria Caca mountain.

There's another snowcapped peak there, unclimbable, the mountain called Huama Yaco.⁴⁰⁷

(In fact, some people say about this mountain, "That's the one, Paria Caca.")

Later, too, after the Spanish Vira Cochas appeared on the scene, when people saw that mountain's snowy peak from the place we call Ynca Caya, they said, "That's Paria Caca."⁴⁰⁸

212 But they say Paria Caca himself lived a little farther down, inside a cliff.⁴⁰⁹

405. All of section 210 has witness validation. It seems to contain not one but two introductory passages, the first framing the second. It may be that the first is by the redactor/editor, and the second is the informant's own introduction; the fifth sentence of section 219 may be the informant's closing formula. Chapters 17, 18, and 19 lack titles.

406. 'They say' supplied to indicate reportive validation, which predominates through the fourth sentence of section 219.

407. Perhaps identifiable with the modern peak Huamilla Lapu (IGM 1954), a mountain 48 km east-southeast of Huarochiri, 5,290 m above sea level. But its location may be too distant to fit the context.

408. This whole parenthesis has witness validation.

409. Duccio Bonavia has identified a rock shelter

Paria Caca and his brothers entered this crag and made it their home,⁴¹⁰ saying, "Here I shall dwell. From this place you must worship me."

We mentioned the other mountain, the one called Huama Yaco, by way of saying that it was a heavily snowcapped peak, and that it was atop this mountain that the Paria Cacas rested on their way back from the Anti lowlands.

213 From there, a great long time ago, even before the Incas were born, Paria Caca convoked all the people of Tawantin Suyu.⁴¹¹

Once all these people had gathered, Paria Caca founded the *huacsa* institution for his own worship.

Later on, when the Incas appeared on the scene and heard about this, they also acted as his *huacas* and held him in great honor.

We call the fashion in which they gathered at that time Tawantin Suyu.⁴¹²

214 At that time, Huallallo Caruvincho, never forget-

close to Mullo Cocha, painted with llama petroglyphs, which might have been where Paria Caca dwelled 'inside a cliff' (personal communication). The fact that this sentence is validated reportively suggests that the teller may not have experienced the actual pilgrimage to this site.

410. In modern Andean myth, *apus* or mountain deities are often spoken of as dwelling "inside" mountain peaks.

411. *Tawantin Suyu* 'fourfold domain' was the Inca name of the Inca Empire. Perhaps this passage claims for Paria Caca priority over the Incas in creating an all-Andean collectivity; but it is also possible that to the teller *tawantin suyu* had a less political sense analogous to English 'the four corners of the earth'.

412. If we take *ninchic* to be out of normal word order, between dashes so to speak, the sentence could read 'In that age when—as we said—the people of Tawantin Suyu . . .' (Taylor 1987b: 271).

ful of his treacherous purpose, caused an animal called *hugi*⁴¹³ to appear on the same mountain where he lived.⁴¹⁴ “This’ll bring grief to Paria Caca!” he thought.

The moment it appeared, the *hugi* escaped into the countryside.

- 215 Had that *hugi* lived, it would have taken Paria Caca’s life or something.

For that reason, Paria Caca commanded the people of Tauantin Suyu, “Go capture that animal called *hugi*!”

Once he gave this command,

All the people chased after it,
and yet it never fell prey.

Paria Caca flashed and stormed,
and yet it never died.⁴¹⁵

- 216 But way far away, a man of the Checa, of the Caca Sica *ayllu*, did capture it.

Then a Quinti man spoke to him: “Brother, you’ve actually caught it! You’re a lucky man! Just go right home displaying its tail as a sign of victory. As for the carcass, I’ll take it away.”

“All right,” the man replied.

- 217 After this exchange, the Quinti man went back by a different route, and told Paria Caca, “Father, I’m the one who caught it.”

Paria Caca rejoiced exultantly and praised him.

(That Quinti man’s name was Choc Payco.)⁴¹⁶

Later on, when the other man delivered the tail, Paria Caca upbraided Choc Payco in scathing language:

“For lying to me,
go fight with the Quinti,

They’ll call you a stinker,
and your offspring, too.”

- 218 But about the Caca Sica *ayllu* and about Huar Cancha and Llichic Cancha, Paria Caca himself said,

“Because you are the one who captured it,
you have become *yanca*.⁴¹⁷

I will listen to you alone,
and to everything you may tell me.

If other people have something to tell me,
they must let you hear it first.”⁴¹⁸

Paria Caca bestowed a name on him, too, saying, “He shall be a *Namca*, *Namca Pariya*.”

- 219 From that time on, they, too, were *yancas*. As for the Concha, their *yanca*’s name, too, was one bestowed by Paria Caca himself. It was Huatusi.

And similarly in all the villages the *yanca* were given names by Paria Caca.

Of what we’d forgotten about Paria Caca’s life, this is as much as we remember now.⁴¹⁹

413. Unidentified, and an anomalous word in the graphophonemic system of the manuscript: the combination *gi* appears elsewhere only in borrowings (*regina* [chap. 20, sec. 256], *virgin* [chap. 20, sec. 258]). This is the third and last of the monsters Huallallo Caruíncho loosed against Paria Caca.

414. The place where the *hugi* appeared is unknown, but a toponym Puente Piedra Huqui (‘Huqui Stone Bridge’) is recorded 6 km northwest of San Lorenzo de Quinti (Guillén Araoz 1953: 230). Since stone usually represents the end of a *huaca*’s trajectory, this may be the distant point where the *hugi* was caught (sec. 216).

415. *tucuy ynantin runacona catirircan/manatacsi apichicorcancho/panas paria cacaca yllaparca tamyarcac/manatacsi huañorcancho*: the parallel structure of this passage (marked here with supplied /) suggests it may be a fragment or an altered rendering of a versified telling, hence the verse presentation in translation.

416. In chapter 9 (sec. 113) and chap. 12 (secs. 166–167), Choc Payco is named as the most senior and privileged of Paria Caca’s offspring. This sentence has witness validation.

417. Caca Sica’s eminence as *yanca* priests is mentioned in chapter 9 (sec. 118). In chapter 18 (sec. 224) a Caca Sica priest is credited with being the savior of a great *huaca*’s cult. The tendency to elevate Caca Sica suggests that within Checa this *ayllu* may have had a disproportionate share in the testimonies.

418. The curse on the Quinti and the blessing on the Caca Sica do not have an exact verse form, but they show a similarity of sequence (the accusation, the sentence, and the people’s comment) and some syntactic resemblance (–*scayquimanta* . . . –*sonqui*). They seem to be presented as a contrasted set and are perhaps verses blurred in translation or editing.

419. This sentence has witness validation.

CHAPTER 18

220

We already mentioned that the Inca revered Paria Caca and acted as *huacsa*.⁴²⁰

It's said that⁴²¹ he, the Inca himself, decreed, "Let thirty men from the Upper Yauyos and the Lower Yauyos⁴²² serve Paria Caca according to the full and waning lunar cycles."⁴²³

In obedience to that command, thirty men

420. This sentence has witness validation. It refers to chapter 17 (sec. 213).

421. 'It's said that' supplied to indicate reportive validation, which continues through the end of section 223.

422. That is, from the two Inca-style moieties (visible on the Dávila Brizeño map; Rostworowski 1988 insert) of the larger region within which this mythology occurs. The division does not necessarily coincide with any locally defined duality.

423. *purapi quillapi* 'full and waning lunar cycles': Urioste (1983: 147) and Arguedas and Duviols (1966: 105) take *pura* to be the name of a month following a weakly attested datum from Juan de Betanzos and Diego Fernández de Palencia.

A better clue is González Holguín's ([1608] 1952: 296) "*pura quilla* the full moon and the waning," which Taylor (1987b: 277) follows. The 'full moon' meaning of *pura quilla* comes clearer from Urton's ethnographic account of lunar phases in modern Quechua culture (1981: 82–85). There are said to be two moons, a bright one called *pura* and a dark one called *huanu*. They rotate around each other, successively obscuring and revealing the bright (*pura*) one.

Mejía Xesspe (Szemiński 1989: 16) seized on another attested sense of *pura*, 'amongst themselves one with the other', to produce a different reading: "He, the Inka, ordered the Indians of Anan Yauya [*sic*] and Rurin Yauyo to take turns monthly among themselves thirty by thirty in order to serve Pariakaka." This reading harmonizes with the next sentence, but its persuasiveness is vitiated by the case of *pura ñiscapi quilla ñiscapi* in chapter 19 (sec. 234), which clearly puts *pura* in opposition to *quilla* 'moon'.

served him in shifts of fifteen days,⁴²⁴ offering him food and feeding him.

221 One day they sacrificed one of his llamas, a llama named Yauri Huanaca.

When those thirty people examined the heart and entrails⁴²⁵ of the llama, one of the thirty, a fellow called Quita Pariasca the Mountain Man,⁴²⁶ spoke up and said, "Alas, brothers, the world⁴²⁷ is

424. *chunca pihccayoc punchaumantacama* 'shifts of fifteen days': the marking of *punchau*, 'day', with suffixes *-manta* and *-cama*, meaning 'from' and 'up to', respectively, occurs nowhere else in the manuscript and 'shift' is a guess at its sense. Taylor (1987b: 277) reads "from the fifteenth day [of the month]."

425. "Idolatry" trials of the period succeeding the manuscript give information on the reading of llama entrails. In one technique a ritualist would inflate the lungs of the sacrificial llama and read the sentiments of the dead, as well as presages for the future, from the air pockets in the lungs.

426. *llacuas quita pariasca sutuoc* 'called Quita Pariasca the Mountain Man': *llacuas* in both colonial and modern Quechua means a herdsman dwelling on the cold heights; it carries connotations of primitivism and coarseness. The antithesis between *llacuas* herders and purportedly more sophisticated valley agriculturalists was richly elaborated in many Lima-region cultures (Duviols 1973).

Llacuas here is likely to be an epithet, not part of the man's name, because, first, in section 222 he is called by name, without the word *llacuas*; and, second, in section 223, he is called *llacuas* without his name, as an insult. *Llacuas* has no English equivalent; 'mountain man' in a usage from the western United States is chosen to convey the idea of a rustic figure from the heights.

Quita, which does seem to be part of the name, means "wild (as of runaway livestock), skittish" (González Holguín [1608] 1952: 310; cf. the epithet *quita yauyo* in chap. 24, sec. 306), translated 'Yauyo wildmen'.

427. As in most instances, *pacha* leaves room for in-

not good! In coming times our father Paria Caca will be abandoned."

- 222 "No," the others retorted, "you're talking nonsense!"

"It's a good augury!"

"What do you know?"

One of them called out, "Hey, Quita Pariasca!⁴²⁸ What makes you think that? In these llama innards our father Paria Caca is foretelling something wonderful!"

But at the time he said that, the mountaineer hadn't even approached the llama to inspect its innards. He had prophesied so just by watching from afar.⁴²⁹

- 223 The mountaineer⁴³⁰ spoke out and rebuked them: "It's Paria Caca himself who says it, brothers."

Then they derided Quita Pariasca with spiteful words:

"That smelly mountain man, what could he know?"

"Our father Paria Caca has subjects as far away as the limits of the land called Chinchay Suyo.⁴³¹ Could such a power ever fall desolate?"

"What does a guy like that know?"

They talked in great anger.

But just a very few days after the day when he'd said these things, they heard someone say, "Vira Cochass⁴³² have appeared in Caxa Marca!"

- 224 A certain man who was also from Checa, named

interpretation; alternatives would be 'earth', 'place', 'time', 'situation'.

428. *say quita pariasca*: Trimborn (1939: 48) took this to be a person's name, Sayquita, but in the absence of *sutioc* or any other name-indicating formula, and given the likelihood that *Quita* is part of the man's name, 'Hey, Quita!' seems likelier.

429. This seems to suggest that the augurers in their pedantry had failed to see what a humble man's broad commonsense could see. Perhaps this is how peasants c. 1600 felt about their wise men's failure to foresee the disastrous consequences of the Spanish invasion.

430. 'The mountaineer' supplied.

431. *chinchay suyo*: the northern and most prestigious quarter of the Inca state included most of highland Peru, all of highland Ecuador, and a fringe of southern-most Colombia.

432. That is, the Spanish. *Vira cocha* is left unglossed in the translation to conserve the sense of mystery that the original seems to convey.

Tama Lliuya Casa Lliuya, a member of the Caca Sica *ayllu*, is known to have⁴³³ dwelt as one of Paria Caca's retainers.

At that time, they say,⁴³⁴ there were thirty priests at Paria Caca and this Casa Lliuya Tama Lliuya was the eldest of them all.

- 225 When the Vira Cochass, the Spaniards,⁴³⁵ arrived there, they kept asking insistently, "What about this *huaca*'s silver and garments?"⁴³⁶

But the thirty refused to reveal anything.

Because they did, the Spanish Vira Cochass got furious, and, ordering some straw piled up, they burned Casa Lliuya.

When half the straw had burned, the wind began to blow it away.⁴³⁷

And so although this man suffered horribly, he did survive.

But by that time the others had handed the clothing and the rest of the things over to the Spaniards.

- 226 It was then that all the men said, "Very truly indeed were we warned by this mountain man Quita Pariasca!"

"Brothers, let's go away, let's disband."

"The world is no longer good," they said. And so they dispersed, each going back to his own village.

- 227 When the burned man from Checa healed up, he arrived at a village called Limca⁴³⁸ in the territory

433. 'Is known to have' supplied to indicate witness validation of this sentence only.

434. 'They say' supplied to indicate return to reportive validation, which continues through the first sentence of section 227.

435. *vira cocha chayman chayaspaca*: we supply 'the Spaniards' because at this point they are coming into focus as humans.

436. *cay huacap collquin pachan* 'this *huaca*'s silver and garments': a sentence fragment forming a direct quote, perhaps to suggest brusque formless speech (of strangers who do not know Quechua properly?).

437. *pucorimorcan*: translocative *-mo-*, 'began to blow [burning straw] away'. Taylor (1980: 127) thought the wind blew the straw fire out, but this seems unlikely because straw burns violently in wind.

438. The location of Limca is not known, but (by analogy with alternations like *Ñamca*/*Ñamuc*), Limca/[Limac] might be the pre-*reducción* village of "Lima" (not to be confused with the city of Lima), which Dávila Brizzeño ([1586] 1965: 161) mentions as a former Yunca outpost in the highlands.

of the Quinti,⁴³⁹ carrying along a child of Paria Caca named Maca Uisa.

439. *quintip llantanpi limca sutioc llactapi: llanta* is problematic; it is treated here as a variant of *llacta* ‘vil-

<margin:> [Maca Uisa]

We’ll describe these things in the next chapter.⁴⁴⁰

lage’ as in González Holguín ([1608] 1952: 208). *Llanta* recurs in chapter 19 (sec. 235).

440. This sentence has witness validation.

CHAPTER 19

228

When the former Inca⁴⁴¹ lived, they say,⁴⁴² this Maca Uisa, a child of Paria Caca, was taken along to help him in warfare.⁴⁴³ The provinces of Amaya and Xiuaya had not yet yielded to conquest.

Because of their resistance, the Inca asked Paria Caca for one of his children, to subdue⁴⁴⁴ those Amaya and Xiuaya people.

229 Paria Caca gave him the one named Maca Uisa.

Carrying him along, the Inca defeated them in no time at all.

From then on, the Incas revered Paria Caca even more. They bestowed gold and ample amounts of their clothing on him, and every year they made people give maize, coca, and other goods from their villages to provide for Paria Caca's thirty retainers.

230 While it was so, the Spanish Vira Cochas came over, as we said, and took everything Maca Uisa⁴⁴⁵ had away from him.

441. *ñauya ynga* 'former Inca' could be read as 'first' or 'early Incas' but this appears less likely since the manuscript generally treats late Incas (naming only Tupay Ynga Yupanqui and Huayna Capac, the last two who ruled before the period of dynastic war and Spanish invasion).

442. 'They say' supplied to indicate reportive validation. This chapter lacks introductory material and may be a continuation of the testimony interrupted by the last sentence of section 227, namely, the story of Maca Uisa.

443. Avila wrote that he met a young woman, disabled in her legs, married to a blue stone that stood for Maca Uisa in the absence of an original golden image that the Inca had taken to Cuzco ([1645] 1918: 67, 69, 71).

444. *atipai* 'to subdue': word appears truncated (*atipaipac*?) but no other reading is evident.

445. 'Maca Uisa' supplied.

(Subsequently, the late Don Sebastián⁴⁴⁶ had all that was left of his things burned.)

231 And so, as we just said, Casa Lliuya resided for many years in the village of Limca, highly honored because he was the upholder of Maca Uisa.

After many years, when the Checa heard how the Quinti had done so well, the late Don Juan Puypu Tacma, who was then *curaca*, sent for Casa Lliuya, saying, "Let him bring Maca Uisa over here."⁴⁴⁷

Then Casa Lliuya, the old man who'd been burned, father of six children, came here with his children.⁴⁴⁸

232 When they arrived here (I mean at Llacsa Tambo)⁴⁴⁹ they asked, "Father Maca Uisa, will you not keep careful guard over the Checa in this village?" Casa Lliuya revealed the answer by sacrific-

446. That is, Don Sebastián Quispe Ninavilca, *curaca* of Huarochirí village and province. See chapter 7 (sec. 93).

447. *huanoc* 'the late' is interlineated. On May 9, 1608, a Checa *cacique* signed his name "don juan Puipotacma" to a statement at Father Avila's trial (Archivo Arzobispal, Lima, Capítulos, Leg. 1, Exp. 9, f. 91r). If this was the same Don Juan mentioned here, the episode of Maca Uisa's retrieval could refer to times as late as the early seventeenth century. On the same assumption, if this man died before the manuscript's last editing, the last editing must postdate May 9, 1608.

448. *sucta runa choriyo chay chorincunahuan hamurcancu*: or perhaps as Taylor has it (1987b: 287), "came here with (a group of) six men each accompanied by his respective child(ren?)."

449. This is the only point at which the text tells where myths were collected. Llacsa Tambo is almost certainly modern Llaquistambo, an outlying hamlet of San Damián de Checa.

ing a llama; and it was just the same as in Huauya Cancha, where the mountain man Quita Pariasca had observed the augury.

- 233 When Casa Lliuya Tama Lliuya's children had already perished and he himself was about to die, he spoke and said, "That's how things were when I arrived here." For he had said on arriving, "The world really is very good. There won't ever be temptation⁴⁵⁰ or disease⁴⁵¹ anymore."⁴⁵²

- 234 It was from that time onward that they upheld Maca Uisa in this village, and all the Checa served him, *ayllu* by *ayllu*, according to the full and waning cycles of the moon.⁴⁵³

On a certain night, all of them, men and women alike, would keep vigil together till dawn.

At daybreak, we know,⁴⁵⁴ they offered guinea pigs and other things from each person individually, saying,

"Please help us and this village;
You are the one who guards it.

450. *huaticay* 'temptation': González Holguín ([1608] 1952: 187–188) gives many variants of this term, most of them Christian-influenced and emphasizing diabolical temptation. In this passage it may refer to sorcery, or perhaps to the temptations of conversion against which the saving of Maca Uisa was a bulwark.

451. *oncoypas* 'disease': in the wake of the epidemics that lashed postconquest Indian societies, the teller(s) appear deeply preoccupied with health and illness. See section 234 below.

452. *pachaca ancha allinmi mana ñam ymapas huaticay oncoypas cancacho* 'The world really is very good. There won't ever be temptation or disease anymore': this prophecy answers Quita Pariasca's earlier prophecy saying the world was no longer good (chap. 18, sec. 221) and his discouraged fellow-worshippers' assent to it (chap. 18, sec. 226). 'Really' is added to convey the combined force of *ancha* and eyewitness validator *-mi*. The idea seems to be that on dying he sees in the well-being of his neighbors the vindication of the prophecy he had made on arriving. But the meanings of this and the preceding section are far from certain.

453. See chapter 18 (sec. 220) and note 423.

454. 'We know' supplied to indicate witness validation of this sentence.

From each and every illness
You are the one who heals us."

- 235 After that,⁴⁵⁵ dwelling in the village of Limca, Maca Uisa⁴⁵⁶ enjoyed ample service. A whole thousand⁴⁵⁷ of Quinti people reportedly⁴⁵⁸ cultivated the fields of Yamlaca in order to provide Maca Uisa's drinks.

And the people who lived there got very rich⁴⁵⁹ indeed, with all kinds of possessions in any quantity.

The Checa envied them⁴⁶⁰ all this, and so it was that the late Don Juan Puypu Tacma dispatched some people to Casa Lliuya, who was a member of his *ayllu*, saying, "Let him bring Maca Uisa here. Why should he keep such a fine *huaca* in those people's⁴⁶¹ village?"

From that time onward, he lived here.

This is as much as we know about Maca Uisa.⁴⁶²

455. *chaymantam* 'after that': carries witness validation, but the main clause has *-si* reportive. This anomaly is fairly common and makes validation of some sentences less than clear.

456. 'Maca Uisa' supplied.

457. *tucoy huc huaranca* 'a whole thousand': 'thousand' is an Inca bureaucratic term signaling a major demographic unit; such decimal terms remained in use in colonial Huarochiri (Spalding 1984: 54). Its use in this colonial (i.e., post-Inca) reorganization of Andean religion suggests (as do the events of chap. 20) that Inca manipulation had a substantial effect on local cultic organization.

458. 'Reportedly' supplied to indicate return to reportive validation.

459. *rico* 'rich', using the Spanish expression as in chapter 5 (secs. 37, 46, 60).

460. A resurgence of a pervasive theme, the Checa rivalry with the more senior Quinti (see, for example, chap. 17, secs. 214ff.). This is apparently the same incident mentioned in section 231.

461. *ymapacmi runap llantanpi* presents two translation problems. First, *runap* 'of people' does not specify what group is concerned; to minimize supplied elements, 'those' is furnished. Taylor (1987b: 291) speculates that it is a pejorative colonial usage of *runa*, which, like modern *indio*, implies baseness. Second, *llantan* is taken as a variant for *llactan*; see chapter 18 (sec. 227). Hernández Príncipe ([1613] 1919: 184) notes that villages and *ayllus* regularly stole each other's *huacas*.

462. This sentence has witness validation.

Here Begins the Life of Llocllay Huancupa. In What Follows, We Shall Also Write about Its End

They say⁴⁶³ the *huaca* named Llocllay Huancupa⁴⁶⁴ was Pacha Camac's child.

A woman named Lanti Chumpi, from Alay Satpa *ayllu*, found this *huaca*'s visible form⁴⁶⁵ while she was cultivating a field.

As she dug it out the first time, she wondered, "What could this be?" and just threw it right back down on the ground.⁴⁶⁶

- ²³⁷ But, while she was digging another time,⁴⁶⁷ she found once again the same thing she'd found before.
"This might be some kind of *huaca*!"⁴⁶⁸ she

463. 'They say' supplied to indicate reportive validation, which continues through the first sentence of section 240.

464. *llocllay huancupa ñiscanchic* means 'Llocllay Huancupa, whom we mentioned above'. But in fact this is the first mention of Llocllay. Perhaps there were other testimonies that have not been included.

465. *ricurimuscantas . . . tarircan* 'she found [Llocllay's] visible form': this could mean a likeness, perhaps a precolumbian artifact (such objects were and still are sometimes taken as signs of the superhuman), but it might also mean some nonfigurative object.

466. *pachallampitac*: since *pacha* means both a location and a moment, could also mean 'immediately'.

467. *huc pachacta* 'another time': again, since *pacha* signifies both time and space, this might also mean 'at another place'. If so, its sense might be that Lanti Chumpi recognized the find's importance by its ability to move underground. Whether one reads two times or two places, the point seems to be that the *huaca* insists on being found by Lanti Chumpi.

468. A *huaca* that belonged to an extinct *ayllu* and had been lost among "roads and crossroads and wildernesses" was called a *purun huaca*, meaning a 'wild' or 'desolate' one. "When they found these . . . they considered themselves lucky and blessed, and they began to en-

thought. And so, thinking, "I'll show it to my elders and the other people of my *ayllu*," she brought it back.

- ²³⁸ At that time there existed in the village named Llacsá Tampo another *huaca*, called Cati Quillay,⁴⁶⁹ an emissary of the Inca.⁴⁷⁰

Cati Quillay was a *yanca*,⁴⁷¹ one who could force any *huaca* that wouldn't talk to speak.

Saying, "Who are you?"

"What is your name?"

"What have you come for?"

he started to make the *huaca* called Llocllay Huancupa talk.

Llocllay Huancupa answered, saying, "I am a child of Pacha Camac Pacha Cuyuchic, World Maker and World Shaker.

"My name is Llocllay Huancupa."⁴⁷²

noble their lineages and their descent" (Hernández Príncipe [1613] 1919: 184). Hence Lanti Chumpi's excitement. All of chapter 20 through section 243 is the biography of a rediscovered *purum huaca* and the story of its cultic "ennoblement" up to and including cooptation by the Inca state.

469. Possibly identifiable with Catequilla or Catachillay, the Southern Cross (González Holguín [1608] 1952: 51) as interpreted by Gary Urton (1981: 130–131).

470. *yngap cachan* 'an emissary of the Inca' employs the Inca term for a plenipotentiary and not a mere messenger.

471. Seems to suggest that one *huaca* (presumably via its priest) could act as *yanca* of another. Taylor (1987b: 295) gives "effortlessly," reading *yanca* as the homonymous adverb.

472. Llocllay Huancupa's name signals his association with rain: González Holguín ([1608] 1952: 215) tells us *lloclla* meant "river in spate, flood." The Jesuit *carta annua* of 1609 (Taylor 1987a: 85–96) tells that *huancupa*,

"It was my father who sent me here, saying, 'Go and protect that Checa village!' " ⁴⁷³

²³⁹ The people rejoiced exuberantly, exclaiming, "Good news! Let him live in this village and watch over us." And since the enclosed courtyard⁴⁷⁴ at the house of the woman who'd discovered the *huaca* was a small one, they enlarged it, and all the Checa, along with the Chauti and Huanri people, adorned her house and courtyard with great reverence.

²⁴⁰ They made arrangements among themselves, saying, "We'll enter in to do his service according to the full and waning moon,⁴⁷⁵ *ayllu* by *ayllu*, with the Allauca taking the lead"; and they gave him some of their llamas.

(At the full moon they in fact⁴⁷⁶ say,
"It's time for his arrival,"

they say,

"It's he who's arriving!")

At the Arrival festival, in the old times, people used to dance wearing the *chumprucu*⁴⁷⁷ and the *huaychao* weavings,⁴⁷⁸ just the same way as they

whose meaning in this context is unclear, formed part of the name of a specific rain *huaca* Tamiahuancupa in Checa. Llocllay Huancupa is there said to be a child of Pacha Camac, the greatest maritime *huaca*, and to be a nephew of Paria Caca, the great embodiment of the stormy heights. Rivers in spate are the connections from the latter to the former. Thus Llocllay's appearance appears a promise that these violent waters would flow to the Checa's benefit and perhaps refrain from creating the washouts and mudslides that often damage villages like the Checa's.

473. Considering that this oracle was mediated by an Inca-sponsored *huaca*, and that Pacha Camac was also a heavily Inca-subsidized cult, the message suggests state cooptation of the newly discovered Llocllay Huancupa. Perhaps, from the Inca point of view, the adoption of such *purum huacas* afforded a safer course than fostering *huacas* of autochthony like Maca Uisa, who, as chapter 19 shows, retained his value as a symbol of resistance.

474. *cancha* 'courtyard': for description of the enclosed Andean residential compound, see Gasparini and Margolies (1980: 181–193).

475. See note 423.

476. This whole parenthesis has witness validation and differs from the surrounding material in tense; it appears to place a contemporary custom in the remembered context of the narrative.

477. Taylor (1987b: 297) suggests a plausible derivation from words meaning 'belt' and 'headdress', hence 'turban'. Turbans are abundantly visible in coastal ceramic portrait vases and are found in prehistoric burials.

478. *huaychao ahua* 'huaychao weavings' is an un-

wore the *chumprucu* and the *huaychao* weavings during Paria Caca's festival season.

²⁴¹ They served him for many years in the way we have described.

At one time, maybe because people didn't take good care of him, Llocllay Huancupa went back to his father Pacha Camac and disappeared.

When the people saw this happen, they grieved deeply and searched for him, adorning the place where Lanti Chumpi had first discovered him, and building him a step-pyramid.⁴⁷⁹

²⁴² But when they still couldn't find him, all the elders readied their llamas, guinea pigs, and all kinds of clothing, and went to Pacha Camac.

So by worshiping his father again, they got Llocllay Huancupa to return.

People served him even more, with renewed fervor, endowing him with llama herders.⁴⁸⁰

They pastured these llamas in the place called Sucya Villca,⁴⁸¹ declaring, "These are llamas of Pacha Camac." The Inca also ratified this practice.⁴⁸²

²⁴³ They arrived to worship one *ayllu* after another,⁴⁸³ and in this fashion they served the *huaca*

certain translation because the expected form would be *ahuasca*.

479. *husnocta pircaspa*: literally, 'walling an *usnu*'; the term *usnu* could mean a stone-faced step-pyramid, perhaps like the one still visible at Vilcashuamán. But in R. T. Zuidema's explication (1980) the concept expands to signify any *axis mundi*-like vertical conduit. The early "extirpator" Cristóbal de Albornoz ([1583?] 1984: 202) describes *usnu*-type shrines as 'towers' built around an axis or shaft at which worship was celebrated. Felipe Guaman Poma de Ayala also mentions *usnus* ([1615] 1980: 1:236, 239, 2:357, 413).

480. That is, like many other superhumans, he was assigned an endowment of capital goods whose products would support his cult and be distributed at his feasts.

481. Identified by Rostworowski (1978: 43) as a plateau above San Bartolomé.

482. That is, when they felt forced to increase the endowment of this Inca-endorsed *huaca*, they arranged for the Inca state to bear part of the additional cost by contributing use of Inca herding facilities at Sucya Villca. This was appropriate because Llocllay's cult was an extension of the Inca-sponsored Pacha Camac cult, and Pacha Camac's animals were herded at Sucya Villca (chap. 22, sec. 277).

483. Taylor (1987b: 299) interprets *ayllo ayllo ñiscampi chayarcán* to mean that each *ayllu* celebrated the "Arrival" rite in turn.

for a great many years. If diseases of any kind came upon them, they would tell him and implore him for well-being. Whenever any affliction or sorrow befell, or when enemies came, or there was an earthquake, people would fear him greatly and say, "His father⁴⁸⁴ is angry!" As for maize offerings, they gave him maize belonging to the Inca from the common granaries,⁴⁸⁵ to provide for his drinks.

244 Later on, at the time when a certain Father Cristóbal de Castilla was in this *reducción* and when Don Gerónimo Cancho Huaman was the *curaca*,⁴⁸⁶ people stopped worshiping, because both of them hated such practices.

But when the first great plague of measles⁴⁸⁷ came, people began to worship him again in all sorts of ways. As if he were thinking, "Llocllay's sending the plague," the *curaca* ceased scolding those people any longer when they drank in the ruined buildings of Purum Huasi.

484. I.e., Pacha Camac.

485. *yngap çaranta sapçicunamantas* 'maize belonging to the Inca from the common granaries': again emphasizes that Llocllay's cult was Inca-subsidized. The suggestion would be that, where maize is concerned, the Inca enabled them to toast Llocllay at Inca, not local, expense.

486. A 1588–1590 lawsuit over the major *cacicazgo* of the Rimac valley contains testimony by Don Gerónimo Cancho Huaman, *curaca* of the Checa. From it we learn that he was four or five years old when the Spanish invaded Peru; he was forty years old when Jesuits taught literacy at Huarochirí missions and never learned to write. From childhood onward he attended meetings of chiefs that the Ninavilca (Huarochirí village) lords convoked at Mama and elsewhere (Murra 1980: xviii–xix). His position as a member of the generation that first managed the transition to colonial religious and political forms helps one to understand his ambivalence toward Christianity (see sec. 247; Archivo General de la Nación, Buenos Aires, ms. 9-45-5-15, ff. 105v–112r; Espinoza Soriano 1983–1984).

487. Cook (1981: 60) says the first measles epidemic was perhaps in 1531–1532, with a question mark, and notes another without a question mark for 1558–1559. It seems likely that the teller means the 1558–1559 epidemic. Perhaps the resurgence of Llocllay's cult following it is a phenomenon resembling the Taki Onqoy nativist movement that arose at that time in the south-central highlands. In order to credit this interpretation one must assume that Gerónimo Cancho Huaman's rule lasted thirty-odd years.

If the date is not 1558 but later, the reference might be to the Moro Onqoy period described by Curatola (1978).

At that same time, the *huaca*'s house caught fire all by itself,⁴⁸⁸ because that was God's will.

245 Now it's a fact that⁴⁸⁹ after Don Gerónimo died, Don Juan Sacsa Lliuya succeeded to the office of *curaca*,⁴⁹⁰ and, since this chief was at the same time a *huaca* himself, everybody began to live as they'd lived in earlier times; they'd visit both Llocllay Huancupa and Maca Uisa, and they kept vigil the whole night there drinking until dawn.

246 Nowadays, due to the preachings of Doctor Avila, some people have converted back to God and forbidden all these practices. But if it hadn't been for a certain man who converted to God with a sincere heart and denounced the *huacas* as demons, people might well have kept on living that way for a long time.⁴⁹¹

We'll let you hear this story in what follows.

247 There was a man named Don Cristóbal Choque Casa, whose father was the late Don Gerónimo Cancho Huaman whom we mentioned before. This man lived a good life from his childhood onward, because his father bitterly scorned all these *huacas*.

But when he was about to die, Don Gerónimo was deceived by these evil spirits and fell into this same sin. Beguiled by many ancient evil spirits,⁴⁹²

488. *paicama* 'all by itself' could also mean 'according to him' (the chief?). Either reading suggests that the fire was taken as the Spanish deity's attack on the native *huaca*.

489. 'Now it's a fact that' supplied to indicate witness validation, which continues through the end of section 247.

490. Since Don Gerónimo was still *curaca* in 1590 according to the source mentioned in note 486, the events that follow can be dated 1590–1608.

491. A nakedly political passage setting up the witness, Cristóbal Choque Casa, as a hero. Choque Casa was Avila's close political ally. Missionary Quechua predominates in the rhetoric of the pure heart and the verbal renunciation of *huacas* as *supay* ('demons', in missionary lexicon). 'The *huacas*' supplied. Original has *caycunacta* 'these'.

492. The passage may have a double meaning, reflecting the double Andean and missionary senses of the word *supay*. An Andean person faced with death could well be concerned with ancient spirits, not in the European understanding of false deities, but in the autochthonous sense of deified ancestors or *huacas* worshiped by ancestors, whose mobile parts (*supay*) could contact the living. The speaker would not have specified *mana alli* unless he supposed that a *supay* could also be good.

he confessed himself just before dying.⁴⁹³

As for that fellow, God only knows where he is now!⁴⁹⁴

- 248 The deceased man's son, that is, the same Don Cristóbal we spoke of, is still alive.

It was he who once saw the demon Llocllay Huancupa with his own eyes, when he was also deceived by the same ancient evil spirits because of his father's death.

The story is like this.

To tell it Don Cristóbal first swore an oath by saying, "This is the cross."⁴⁹⁵

- 249 Don Cristóbal said that one night⁴⁹⁶ he went to Llocllay Huancupa's house while his lover⁴⁹⁷ was

493. *ahcca mana alli supai machucunap llullaycuscā ña huañoypacri confesacorcanmi* 'Beguiled by many ancient evil spirits he confessed himself just before dying': an ambiguous sentence. It could mean, as we indicate, that although Don Gerónimo relapsed into *huaca* worship in old age, his conscience at the last impelled him to confess in Catholic fashion. Or it could mean that he made his last confession to a *huaca* priest. The latter reading presupposes that the Spanish-derived verb *confesacoy* could denominate a non-Christian rite (much as *sacerdote* could mean *huaca* priest).

494. *chaytaca dios aponchictaccha yachan maypi cascantapas* 'As for that fellow, God only knows where he is now!': perhaps with a shade of satirical intent, or perhaps said in pity; since the old man was so indecisive in religious matters, who can say whether he is now in Hell or Heaven?

495. Cristóbal's testimony begins with not one but two narrative formulas: first, *cay simire cay ynam* 'the story is like this', a common one throughout the manuscript and perhaps an Andean phrase; then, *cayta rimaypacca ñaupacracmi don christobal juramentocta mucharcā caymi + ñispa* 'to tell it Don Cristóbal first swore an oath by saying, "This is the cross,"' an emphatic touch of mission culture.

496. *huc tutas don x(christob)al* 'Don Cristóbal said that one night': more literally, taking reportive validation into account, 'One night Don Cristóbal, it's said'. But the fact that we know it was Don Cristóbal himself who swore before telling the story that begins here justifies 'Don Cristóbal said that'. Since Don Cristóbal would presumably have talked in first person, the passage shows that *-si* reportive passages are likely to be paraphrases of testimony, not transcripts, and therefore unreliable as to exact properties of discourse including, for example, versification. (An alternative hypothesis would be that Don Cristóbal himself wrote the passage, trumping up the oath and third person diction.)

there. Cristóbal had abandoned the worship of this *huaca*, and hardly thought of him anymore.

When he arrived at the dwelling he went into a little shed in the corral⁴⁹⁸ to urinate.

- 250 From inside that place, the spot where they've put a cross, that demon appeared before his eyes like a silver plate that, mirroring⁴⁹⁹ the light of the midday sun, dazzles a man's eyesight.

When he saw this he almost fell to the ground.

Reciting the Our Father and the Hail Mary, he fled toward the little lodging, the woman's dwelling.

- 251 When he'd walked halfway there, the demon flashed three times again. When he arrived at the room it flashed⁵⁰⁰ another three times, and the first time it had flashed⁵⁰¹ three times also.

So, all in all, it flashed nine times.

Seeing that demon flash so many times, and becoming thoroughly terrified, Don Cristóbal reached the place where the woman slept and woke her up abruptly.

- 252 Two children were also asleep there.

He was panting⁵⁰² so hard, the children got scared and said, "It's our father who's doing that!"

(These children and the young woman, too, were the offspring of the demon's priest.)⁵⁰³

497. *sipasnin* 'his lover': the referent of the third person possessive marker *-n* is ambiguous (Cristóbal's lover or Llocllay's?) and the translation reflects this. The former, however, seems likelier; why, otherwise, would Cristóbal, a Christian, go to Llocllay's house? And why at night?

498. *racay huasillaman* 'into a little shed in the corral': Taylor (1987b: 305) has "into a little house in ruins (which had been the *huaca*'s sanctuary[?])." The discrepancy arises from readings of *racay*, which can mean either 'corral' or (in the form *racay racay*) 'depopulated town' (González Holguín [1608] 1952: 311).

499. *tincochisca* 'mirroring': more literally, 'caused to match' (i.e., angled so as to reflect) the mid-day sun. The phrase *runap ñauinta tutayachic* reads more literally 'as what benights a man's eyes' and alludes to the darkening of vision caused by gazing at a too-bright light.

500. 'It flashed' supplied.

501. 'It had flashed' supplied.

502. *siuyaptinsi* 'he was panting': original is ambiguous as to whether Llocllay or (more probably) Don Cristóbal is the subject of this verb.

503. I.e., of Astu Huaman, who appears in chapter 21 (secs. 265, 267).

Then, just as a man entering a doorway at dusk darkens the room even more,⁵⁰⁴ so it was also that night as the demon went in and out. The demon wanted to overpower Don Cristóbal, making his ears ring with a “Chuy!” sound, as if he were about to demolish the house, too.

- 253 Cristóbal invoked God, shouting out at the top of his voice all the prayers he knew, <crossed out:> [knowing] saying the *doctrina*⁵⁰⁵ from beginning to end over and over again.

As midnight passed, the demon was overpowering him. He thought that nothing could save him, the demon was making him sweat so. Then he invoked our mother Saint Mary, saying:

- 254 “Oh mother, you are my only mother.
Shall this evil demon overpower me?

You, who are my mother, please help me
Even though I am a great sinner,

I myself served this very demon;
Now I recognize that he was a demon all along,

That he is not God,
That he could never do anything good.

- 255 You, my only queen,⁵⁰⁶
You alone will rescue me from this danger!

Please intercede on my behalf with your son Jesus.
Let him rescue me right now

From this sin of mine,
And from the hand of this wicked demon.”

Thus weeping and sweating⁵⁰⁷ he invoked our mother the Virgin, our one and only queen.

504. The simile likens the alternating glare and gloom of Llocllay's presence to the interior of an Andean house—normally windowless—that is thrown into darkness when a person enters its doorway and brightens when he steps out.

505. *doctrina*: the elementary religious lessons that Indian neophytes were required to learn.

506. *coyallaytacmi*, ‘my only queen’, using the word for an Inca queen, that is, a sister-wife of the Inca.

507. When Jesuits campaigned in Huarochirí in 1571, they encouraged people to “pour out tears and sobs” while renouncing the *huacas*, and intentionally “drew the business out so that [converts] would feel greater anguish.” The 1571 campaign produced behavior something

- 256 After finishing this, he prayed saying the *Salve Regina Mater Misericordiae* in Latin.

While he was reciting it, just as he was in the middle of reciting it, that shameless wicked demon shook the house and, calling “Chus!” in a very deep voice, went out of it in the form of a barn owl.⁵⁰⁸

At that exact moment, the place became like dawn.⁵⁰⁹ There were no longer any terrors, nothing like a man entering and leaving a room.

- 257 From then on, Cristóbal worshiped God and Mary the Holy Virgin even more, so that they might help him always.

In the morning he addressed all the people:
“Brothers and fathers, that Llocllay Huancupa whom we feared has turned out to be a demonic barn owl.

- 258 “Last night, with the help of the Virgin Saint Mary our mother, I conquered him for good. From now on, none of you are to enter that house. If I ever see anybody enter or approach the house, I’ll tell the *padre*. Consider carefully⁵¹⁰ what I’ve said and receive it into your hearts completely!” Thus he admonished all the people.

- 259 Some people probably assented, while others stood mute for fear of that demon.

like Cristóbal's: the missionaries proudly reported that one convert “passed three hours weeping bitterly and conversing with Our Lord” before turning himself in to become a servitor of Catholic priests (Arguedas and Duviols 1966: 241–244). These precedents suggest that chapters 20 and 21 render the subjective content of what had perhaps become by 1600 a fairly standardized cultural performance.

508. *chusic* ‘barn owl’: this bird's appearance echoes the image of the flashing disk. “Barn owl, *Tyto alba contempta* (*Lechuza de los campanarios*). A large owl, buffy-white below speckled with black, pearl gray to buff above, finely spotted. The feathers about the eyes form a white disk in the shape of a heart. Recognized by its light color and characteristic hoarse screech. Nocturnal, withdrawing during the day into caves, holes in trees, towers of churches, etc. In nearly all parts of our region, but never common; also in Lima. A species of world-wide distribution” (Koepcke 1970: 76). The barn owl, a nocturnal predator, seems an appropriate likeness of the nocturnal *huaca* Llocllay (his rites are celebrated at night).

509. *pachaca pacaric yna carcan*: could be read in a grander sense as meaning ‘the world was as if dawning’.

510. *alli yachacoy* ‘consider carefully’: might also be read ‘good thought’. Taylor (1987b: 311) detects a possible calque to *evangelio*, which (via a Greek etymology) means ‘good news’.

From that time forward, they definitely did refrain from going there.⁵¹¹

511. *chayaita samarcancu* might also mean “they desisted from performing the Arrival ritual” (Taylor 1987b: 313).

But that night, while Don Cristóbal was asleep in his house, Llocllay Huancupa appeared to him again in a dream.

Next we’ll write about this.⁵¹²

512. This sentence has witness validation.

Although a Dream Is Not Valid,⁵¹³ We Shall Speak about That Demon's Frightful Deeds and Also about the Way in Which Don Cristóbal Defeated Him

We've already heard that Llocllay Huancupá was an evil demon and that Don Cristóbal defeated him.⁵¹⁴

But Don Cristóbal said⁵¹⁵ the evil demon also wanted to overpower him in a dream.

And so on the night of the very next day, the demon summoned Don Cristóbal from his house by

513. *mana muscoy yupai captinpas* 'Although a Dream Is Not Valid': the original reads 'although a dream is not *yupai*'. A root sense of *yupay* is 'account'. Derivatives include 'to give account of something received, or to enumerate, to evaluate, to esteem, or to assign a price'; "*yupay* honor or esteem" and "*mana yupay* what is null or invalid or worthless or commanding no price" are further derivatives (González Holguín [1608] 1952: 371–372).

Why does the writer of the title feel a need to disclaim the value or validity of dreams? Mannheim (1987: 137) points out that the Third Council of Lima, laying down the doctrine that Avila enforced, had explicitly attacked the idea that dreams are *yupai*. Mannheim translates the council's strictures from Quechua:

Don't be keeping [*Ama . . . yupaychanquichicchu*]
dreams

"I dreamt this or that,
why did I dream it?"

Don't ask:
dreams are just worthless and
not to be kept [*mana yupaychaypacchu*].

"Extirpators" energetically attacked belief in dreams and dream interpreters [Arriaga [1621] 1968: 35; Hernández Príncipe [1613] 1919: 192, [1622] 1923: 25–49].

514. End of an introductory passage with witness validation.

515. 'Don Cristóbal said' supplied to indicated reportive validation, which continues through the second sentence of section 272. Don Cristóbal may be taken as the speaker because in section 248 he is named as the source.

sending a man. He didn't tell him, "I'm going to Llocllay Huancupa."⁵¹⁶ Only when they were about to enter his house did Don Cristóbal catch on.⁵¹⁷

261 He got scared and approached an old lady, a Yunca woman,⁵¹⁸ who lived there in that same patio.

This old lady was a Yunca woman.

"Son," she said to him, "Why is it that you don't honor Llocllay Huancupa, child of Pacha Cuyuchic the Earth Shaker? It's to find out about this that he's summoned you now."⁵¹⁹

516. *manas paiman rine nircancho* 'He didn't tell him, "I'm going to Llocllay Huancupa"': Llocllay's name supplied as referent of *pai*. Taylor (1987b: 315) reads this differently: "He didn't say to him if he meant to go or not." The discrepancy arises from two points: first, whether one takes the messenger or Don Cristóbal to be the speaker; Taylor seems to accept the latter. Second, whether one understands the quotation to begin before or after *paiman* 'to him'; Taylor accepts the latter.

517. *ña huasinman yaicusparacsi musyacorcan* 'Only when they were about to enter his house did Don Cristóbal catch on': Don Cristóbal, supplied subject. Taylor (1987b: 315) has: "At the moment when he was about to enter his house, [Don Cristóbal] had a presentiment [of something unlucky]." This reading is justified with an explication of *musyay* suggesting it means 'enter into a trance', with connotations of precognition. Our translation is influenced by another usage of *musyasca* to mean 'in the know, aware'.

518. *huc yunga huarmi chacuas* 'an old lady, a Yunca woman': *chacuas* is a modern Quechua I word meaning 'old lady'. The alternative translation would be to take this as her personal name.

519. Presumably the old lady's speech is a reply to Don Cristóbal's invective against Llocllay on the previous day.

- 262 When she said that, he replied, "Ma'am, he's an evil demon. Why should I honor him?"

Don Cristóbal was gripping a silver coin of four *reales*⁵²⁰ in his hand.

He dropped it⁵²¹ on the ground.

While he was searching for it, Francisco Trompetero called him from outside: "Hey, what're you doing in there?⁵²² Your father's really angry! He's calling you and he says, 'He'd better come in a hurry!'"

- 263 As soon as he said this, Cristóbal replied, "Wait a moment, brother, I'm coming right away" and rummaged for his silver coin in frantic haste.

At the moment when he found it, when he was about to leave, the demon, just as he'd scared Cristóbal before with a silvery flash⁵²³ against his face,

520. A four-*real* coin is half a *peso de ocho*, very commonly circulated c. 1600. The coin Don Cristóbal held was almost certainly of a design showing the quartered arms of Castile and León on one side and the arms of the Hapsburgs (probably the version obtaining during the reigns of Felipe II [1556–1598] or Felipe III [1598–1621]) on the other. The arms of Castile and León are contained within the upper left quadrant of the Hapsburg arms. The quartered space—reminiscent of Peruvian ideas of the Inca world as a 'fourfold domain'—may have figured in Don Cristóbal's dream thinking (Dasi 1950: 60, 66; Grünthal and Sellschopp 1978: 49, 60; Rodríguez Lorente 1965: 129, 153).

521. *ormachircan* 'he dropped it': ambiguous as to whether he dropped it by accident or let it fall on purpose, but the former seems more plausible since he at once tries to recover it.

522. Francisco Trompetero's surname or nickname means 'trumpeter' in Spanish and suggests a military or church musician. His question sounds rhetorical; he would have known very well why an Andean person carries a coin when visiting a *huaca*: "In some places silver is offered up in the form of *reales*. In Libia Cancharco fifteen silver *duros* [i.e., whole pesos] were found, together with some small pieces of ordinary silver. In the town of Recuay Dr. Ramírez found two hundred *duros* in a *huaca*. They generally hammer the coins or chew them in such a way that you can hardly see the royal arms. Coins are also found around *huacas*, looking as if stained with blood or *chicha* [i.e., maize beer]. On other occasions, the priests of the *huacas* keep the silver that is collected as offerings to be spent for their festivals" (Arriaga [1621] 1968: 43; Keating's translation).

523. *collqui ñiscanchichuan* 'with a silvery flash': Taylor (1987b: 317–318) thinks the silvery object might be a silver disk hung in Llocllay Huancupa's shrine and thinks it unlikely to be the silver coin just mentioned, which he considers "a superfluous detail." In dream imagery however, the two might be conflated.

flashed out once again from inside the place where the cross was put.

- 264 Realizing that he couldn't save himself now, Cristóbal suddenly got frightened. Someone called him from inside the room, saying, "It's our father⁵²⁴ who calls you!"

Saying, "All right," but deeply angry in his heart, he went inside. On entering he sat down close by the door.

- 265 Right then, Astu Huaman was offering drinks and feeding the *huaca*, saying,

"Father Llocllay Huancupa, you are Pacha Cuyuchic's child,
It is you who gave force and form to people."

As he spoke he fed him with deep veneration.

The demon, unable to speak, repeated "Hu, hu"⁵²⁵ over and over again.

And when Astu Huaman offered him some coca, the demon made it crackle "Chac, chac" just as a coca-chewer does.

- 266 While he was doing that, a long time, Don Cristóbal saw from inside the house something that looked like a painting encircling it completely in two patterned bands. It looked as a Roman-style mural painting might if it went on two levels.⁵²⁶

524. *yayanchic* 'our father': inclusive first person plural, conveying the speaker's assumption that the 'father' in question is also the father of the person he addresses, namely Cristóbal.

525. *chaysi chay supaica mana rimacoytaca husachispa hu hu ñicacharcán*: if one takes *hu hu ñicacharcán* to derive from *huñiy* 'to agree' then the sense is that Llocllay here expresses his approval of the offering. But, since Llocllay appears an inarticulate *huaca*, it seems likelier that *hu hu* represents his inarticulate speech. Or perhaps *hu hu* represents an owl's cry, since Llocllay took an owl's form in chapter 20 (sec. 256).

526. *don christobalca chay huasin hucomanta tucoy yscay pachapi muyoc pintasca ynacta ricorcan ymanam rromano pintasca yscay patarapi rinman chay hynacta*: more literally, 'Don Cristóbal saw from inside that house all on two places [levels, bands, or sides] something like a surrounding [rotating?] painted [object? pattern?], the way a Roman painted [object? pattern?] would go on two bands, like that'.

Translators differ in their efforts to visualize this difficult passage.

The wide divergences all turn on the meaning of the Spanish word *romano*. Trimborn (1939: 114) and Urioste

On one band of the painting was a tiny demon, very black, his eyes just like silver,⁵²⁷ who gripped in his hand a wooden stick with a hook. On top of him was a llama head. Above that was again the little demon and above that again the llama head.

In this way it encircled the whole house in a twofold pattern.

267 It really scared Don Cristóbal that he kept seeing all these things, and he tried to recall just what he'd meant to say.

Meanwhile, since the demon had finished eating, Astu Huaman made the fire blaze up again to burn all the things he'd offered.

268 After this was done, and when everything was quiet, Don Cristóbal began to speak:⁵²⁸

"Listen, Llocllay Huancupa! They address you⁵²⁹ as the animator of humanity and as the World Shaker. People say 'He is the very one who makes everything!' and all mankind fears you. So why have you summoned me now?⁵³⁰ For my part, I say,

'Is not Jesus Christ the son of God?⁵³¹
Shall I not revere this one, the true God?
Shall I not revere his word forever?'⁵³²

(1983: 169) rendered it as concerning a Roman painting, and Taylor earlier accepted a related gloss, seeing it as a retable or mural in the style of a Roman church, but folded double (*yscay patarapi*). Arguedas and Duviols (1966: 123) judged that *romano* refers to a scale called *romana*, that is, a steelyard scale, which could be said to 'move on two levels', and Taylor later (1987b: 319) accepted this view (see Hartmann and Holm 1985). Teresa Gisbert, the leading specialist in Andean visual arts for this period, endorses 'Roman-style painting' (personal communication). Ferrell (n.d.) considers relevant to a "banded" appearance the 1737 *Diccionario de autoridades* gloss of *romano* as 'a gray and black striped cat' (1976: 3:635).

527. Taylor (1987b: 321) has *monedas de plata* 'silver coins', which apparently echoes the coin theme starting in section 262.

528. Cristóbal now answers Llocllay's summons in section 261 by explaining why he does not respect him.

529. *ñispa ñisonqui* 'they address you': subject unspecified. The implied subject could be people in general, or Llocllay's priest Astu Huaman.

530. The point apparently being, if Llocllay really has these powers and privileges, why should Don Cristóbal's irreverence bother him?

531. Contrasting Jesus' claim to being the son of *dios* with Llocllay's claim of being the son of Pacha Camac.

532. These sentences repeat the suffix sequence -*tac*-

This is what I say.

269 "Or am I mistaken? Then tell me now! Say,

'He is not the true God,
I am the maker of everything!'

so that from that moment on I may worship you."

So Cristóbal spoke, but the demon stayed mute. He didn't say anything at all.

270 At that moment Don Cristóbal defied him, crying good and loud:

"Look!
Are you not a demon?
Could you defeat my Lord Jesus Christ,
In whom I believe?

Look!
This house of yours!
Yes, you dwell surrounded by demons⁵³³—
Should I believe in you?"

271 At that moment somebody threw what we call⁵³⁴ a *llaullaya*⁵³⁵ at him.

Regarding this thing, Don Cristóbal didn't know whether that demon threw it or whether it was from God's side. For, defending himself with the *llaullaya* alone, he fled from that house all the way to the corner of the count's house,⁵³⁶ always moving sideways and protecting himself with it.

Then he woke up.

cha, which in turn derives from two others that bespeak, respectively, forceful contrast (-*tac*) and a conjectural tone (-*cha*); the overall import is something like, but not quite like, a rhetorical question (Urioste 1973: 40–42, 51).

533. *supaipac yntupayascanmi ari tianqui* 'you dwell surrounded by demons': refers to the apparition of the checkered frieze or mural all around Llocllay's dwelling, covered with images Don Cristóbal thought demonic (sec. 266).

534. *ñiycum* 'what we call': exclusive first person plural form, implying that 'we' tellers, as opposed to the person addressed, call the object *llaullaya*. The source senses a cultural or linguistic difference between himself and the addressee.

535. Untranslated; may be an agricultural implement or a garment.

536. *condep huasincama* 'all the way to . . . the count's house': *conde* could mean a person from the *Kunti* quarter of the empire (*Kuntisuyu* in Inca terms), or a person called count (*conde*) in Spanish.

272 From that exact time on, right up to the present, he defeated various *huacas* in his dreams the same way. Any number of times he defeated both Paria Caca and Chaupi Ñamca, telling the people all about it over and over again, saying, “They’re demons!”

This is all we know about this evil demon’s existence and about Don Cristóbal’s victory.⁵³⁷

273 On this matter: it’s said that⁵³⁸ in performing Llocllay’s Arrival festival in the old days, the people who celebrated used to dance first until sundown.⁵³⁹

Toward dusk, the *huaca*’s priest would say, “Now our father is drunk; Let him dance!” And he would perform a dance “as if in his stead,” as they used to say.

Saying, “It’s our father who invites you!” he’d bring maize beer in one small wooden beaker, and put another one inside the shrine in a pot, saying, “It’s he who drinks this.”⁵⁴⁰

274 Regarding this drinking: the priest, we know,⁵⁴¹ would offer drinks starting from the elders, all the way down to the end of the assembly.⁵⁴²

<A marginal addition in Quechua begins here:>

When they finished the round of drinking, they say,⁵⁴³ the priest⁵⁴⁴ would bring the gourd from which the demon had drunk outside, to where the guests were, so they could worship that gourd.

<Marginal addition ends.>

The following day he’d have them carry the leftovers and edible remains to Sucya Villca.

275 In the old days, the people who’d come to celebrate Llocllay Huancupa’s Arrival reportedly⁵⁴⁵ brought the food to Sucya Villca himself.

However, we know that⁵⁴⁶ later on,⁵⁴⁷ after finishing Llocllay Huancupa’s feeding, people also fed Sucya Villca right at that spot.

In what follows, we’ll write about these food offerings to Sucya Villca, and why they fed him, and also about who Pacha Camac was.

537. This sentence has witness validation.

538. ‘It’s said that’ supplied to indicate reportive validation, which continues through the end of section 273.

539. *hura pachacama* ‘until sundown’: see chapter 8 (sec. 103), where the same locution occurs. Other possible readings are ‘at the lowlands’ and ‘Pacha Camac’. The latter is problematic, if Pacha Camac were intended, one would expect final *c* and a locative suffix.

540. This is a description of drinking with paired vessels, one for the deity and one for the worshiper, a gesture of religious reciprocity pictured by Felipe Guaman Poma ([1615] 1980: 1:80).

541. ‘We know’ supplied to indicate that this passage, to the end of the chapter, has witness validation. The marginal note has reportive -*si*.

542. ‘Of the assembly’ supplied.

543. ‘They say’ supplied to indicate that the marginal note has reportive validation.

544. ‘The priest’ supplied.

545. ‘Reportedly’ supplied to indicate reportive validation of this sentence.

546. ‘We know that’ supplied to indicate that this sentence and the remainder of the chapter have witness validation.

547. Possibly meaning after the Spanish conquest.

CHAPTER 22

276

We don't in fact⁵⁴⁸ know much about the Incas' great reverence for Pacha Camac.⁵⁴⁹

But we do know a few things. In the highlands, they say,⁵⁵⁰ the Incas worshiped the sun as the object of their adoration from Titi Caca, saying,

"It is he who made us Inca!"

From the lowlands, they worshiped Pacha Camac, saying,

"It is he who made us Inca!"⁵⁵¹

548. 'In fact' supplied to indicate witness validation, which predominates through the end of section 279. Some of the exceptions are conjectural *-cha* validations, translated with 'probably', 'it looks like', 'possibly', and 'no doubt'. It appears as though the source of these comments is giving his/her own understanding of Inca thought rather than relaying an informant's.

549. *yngacunap pacha camacta ancha yupaychascantaca manam allichu yachanchic*: Taylor (1987b: 329) has: "We do not know very well whether the Incas held Pachacamac in high esteem." But this seems the less likely of two possible readings, since the next few sections show that the speaker clearly knows the Incas did esteem him highly, in fact that is the point the chapter seeks to explain.

550. 'They say' supplied to indicate reportive validation of this sentence, however, the next sentence, which complements it, has witness validation.

551. *hanac ticsipi muchanantas ynticta titi caca-manta mucharcan caymi yngacta camahuarca ñispa hura ticsimantam canan pacha camac ñiscacta caymi yngacta camahuarca ñispatac mucharcancu* 'In the highlands, they say, the Incas worshiped the sun as the object of their adoration from Titi Caca, saying, "It is he who made us Inca!" From the lowlands, they worshiped Pacha Camac, saying, "It is he who made us Inca!"': this passage opposes Titi Caca to Pacha Camac as respectively the world's 'upper' and 'lower foundations' (*hanac/hura ticsi*). While its specific sense is uncertain, it appears to

277 The Incas worshiped these two *huacas* most, far beyond all others, exalting them supremely and adorning them with their silver and gold, putting many hundreds of retainers at their service, and placing llama herds for their endowments in all the villages.

The llamas of Pacha Camac sent from the Checa people stayed at Sucya Villca.⁵⁵²

278 Here's how we interpret this.

The Inca probably thought, "The world ends somewhere in the waters of Ura Cocha that are below Titi Caca, and somewhere past the place they call Pacha Camac."⁵⁵³ It looks like there is no village

report an imperial vision of place-shrines on the highest scale, namely, place-shrines categorizing the whole world as one place. The ritual duality expresses the wholeness of the world in the image of centrifugal imperial expansion: from the world's highland center to its maritime edge.

552. Sucya Villca was a lake, see chapter 21 (secs. 274, 275) and chapter 22 (secs. 281–282, 284). From chapter 21 (sec. 275) we see that in the teller's mind Sucya Villca and Pacha Camac are closely linked. María Rostworowski (1978: 43) says Sucya Villca was a plateau above San Bartolomé, 40 km northwest of Huarochirí, and that Sucya Cancha was there, too.

The complex of Sucya Villca and Sucya Cancha figures in the manuscript as the *coca* place par excellence. In chapter 8 (sec. 109), Sucya Cancha is a place of coca fields; in chapter 9 (sec. 124), it is the place where people went to 'trade' (*rantiy*) coca.

553. *cay ñiscanchic titi caca hura cochañicpiri pacha camac ñiscancunallapich pacha puchocan* 'The world ends somewhere in the waters of Ura Cocha that are below Titi Caca, and somewhere past the place they call Pacha Camac': a difficult passage. The teller perhaps thinks the Inca is reconciling two images of the edge of the

beyond these points, possibly nothing at all."⁵⁵⁴

- 279 It was no doubt with such thoughts in mind that the Incas worshiped these two *huacas* more than the other *huacas*, and even placed the sun next to the lowland *huaca* Pacha Camac.

The place where they set it is called Punchau Cancha,⁵⁵⁵ the Sun Court, to this very day.

- 280 Reportedly they gave Pacha Camac each year⁵⁵⁶ what's called a *Capac Hucha*,⁵⁵⁷ namely, human beings⁵⁵⁸ both female and male, from Tauantin Suyu, the four quarters of the world.

Arriving at Pacha Camac, and saying to Pacha,⁵⁵⁹ "Here they are. We offer them to you, father!" they'd bury the *Capac Hucha* alive, along with gold and silver. And according to the cycles of the full and waning moon, they fed him llamas and served him drinks without pause.

world: the one associated with their origin myth, in which the ocean is imagined as the deep reservoir from which Titi Caca's high-lying waters are lifted, and a coastal one, which identifies the ocean with the great seaside *huaca* Pacha Camac. The attempt to collate southern highland (especially Inca) understandings of Pacha Camac with more local west Andean ones appears analogous to the attempt to coordinate Cuni Raya of the coastal peoples with Vira Cocha of the highlanders. The phrase 'the place *they* call Pacha Camac' may be a clue; Rostworowski (1977: 198) notes that local usage called the place and its polity Ychma and only the *huaca* proper Pacha Camac.

554. The section has a marked predominance of dubitative validators, imparting a speculative tone.

555. The allusion is probably to the huge Inca temple still visible at Pachacámac.

556. In most other sources about *capac hucha*, the rite is described not as annual but as a crisis rite called on such occasions as plague, royal succession, or defeat (Duviols 1976). 'Reportedly' supplied to indicate reportive validation, which continues through the end of section 280.

557. *Capac Hucha* 'opulent prestation': an all-empire sacrificial and redistributive cycle, in which offerings from all the empire's peoples were collected at Cuzco and then redistributed outward to all the empire's shrines and borders. It heavily emphasized burial of human sacrifices, which became new Inca-sponsored shrines (Duviols 1976; Zuidema 1973).

558. Hernández Príncipe tells us that they were spotless children ([1622] 1923: 60), and Betanzos ([1551] 1987: 142) that they were "married" and buried in pairs together.

559. *pachaman* 'to Pacha': alternative translations, none certain, are 'to the earth', 'to the world', or 'to Pacha' (i.e., the first part of the *huaca*'s name).

- 281 At any time when it failed to rain in the Checa villages, the Yunca, giving their yearly offering of gold and silver according to the Inca's orders, would send it to Sucya Villca <crossed out:> [mountain] with their maize beer and *ticti*.⁵⁶⁰

They reportedly⁵⁶¹ offered all this to Sucya Villca, saying,

"Father, it is Pacha Camac who sends us here.
And you are the one who rains on the land.

When no water flows from this lake,
We humans suffer from drought.

Therefore send down rain!
This is what we have come for."⁵⁶²

- 282 In such years, the Yunca, too, used to bury the silver and gold that they brought next to Sucya Villca lake.

Sucya Villca's retainers were from the Yasapa *ayllu* and his llama herder from the Allauca.

(Later on, when the Spaniards were already here, a certain Yasapa man called Payco Casa saw them bury some gold and silver there.)

- 283 And likewise the Inca would have offerings of his gold and silver given according to his *quipu* account, to all the *huacas*, to the well-known *huacas*, to all the *huacas*. He used to have them give gold *auquis* and silver *auquis* (when we say *choqui* we mean gold), and also gold *urpus* and silver *urpus*, and gold *tipsis* and silver *tipsis*; all this exactly according to *quipu* counts.⁵⁶³

560. The validation of this sentence is unclear, both *-mi* and *-si* being present.

561. 'Reportedly' supplied to indicate reportive validation, which continues through the second sentence of section 282.

562. These six utterances are not in semantic couplets, but their briefness and tight logical linkage gives them the aspect of an oral set-piece.

563. *choc auqui collqui auqui choqui ñispaca coric-tam ñinchic chaymantam choc urpo collc horpo choc tipsi collc tipsi ñiscacunactas cochic carcan quipollamanta*: if one were to reproduce the truncated words as such, it would read: 'gol *auqui* and silver *auqui* (in saying *choqui* we mean gold) and things called gol *urpo* and silv *horpo*, gol *tipsi* and silv *tipsi*, are what they used to have given just according to the *quipu*'.

Choque is the word for gold in the Aymara-related languages; that it needs to be explained suggests a discrepancy of dialect or local culture between the teller and one or more of his audiences: scribe, translator (if there was one), compiler, or expected reader. The reason for

Of these major *huacas*, not a single one went unattended.

truncation is unknown.

Auqui may be "*auquicuna* the nobles, the *hidalgos*, lords" (González Holguín [1608] 1952: 38), meaning Inca princes. Ferrell (n.d.: 5–6) offers "gold miners and silver miners," using a gloss of *auqui* from Perroud and Chouvenec's dictionary (1970?: 14).

Urpo might be 'beer vessel' (González Holguín [1608] 1952: 357).

Tipsi remains unknown. Ferrell (n.d.: 7–8) interprets it as meaning *chaquira*, that is, 'small beads', because of likeness to a Junín-Huanca Quechua I term meaning a pinch or nip of something (Cerrón-Palomino 1976a: 133).

The list clearly forms a sixfold (two-sided, three-leveled) ranking of something. Of what? Despite the syntactical fact that *ñiscacunacta* suggests the six items are the things given (-*cta* is a direct object marker), the next sentence strongly suggests the point of the list is to tell the brackets of *huacas* to whom the *quipu* dictated they be given.

Zuidema (personal communication) thinks it is a classification of shrines and their respective priesthoods, citing Guaman Poma ([1615] 1980: 1:253). Guaman Poma explains that the Inca state subsidized three levels of *huaca* priests (with Paria Caca being served by the highest). The gold/silver opposition may express moiety or gender

284 Following the same criterion, the Inca, when arriving⁵⁶⁴ at the shrine of Llocllay Huancupa, would have them feed Sucya Villca the following morning; for there was fear of his father.⁵⁶⁵

This much we know about Pacha Camac, the World Maker.⁵⁶⁶

Regarding Pacha Cuyuchic, the World Shaker, this is what people said:⁵⁶⁷

"When he gets angry, earth trembles.
When he turns his face sideways it quakes.

Lest that happen he holds his face still.
The world would end if he ever rolled over."

dualism.

A *quipu* is a set of cords knotted to make an abacus-like mnemonic record (Ascher and Ascher 1981).

564. *chayaspapas* 'when arriving': or perhaps 'celebrating the Arrival festival' (see chap. 20, sec. 240).

565. *yayanpa manchacan captin*: that is, fear of Llocllay's father, Pacha Camac. But it might also mean 'for he [Llocllay Huancupa] was feared by his [Inca's] father'; that is, that the Incas accepted his cult as a hereditary obligation.

566. This sentence has witness validation.

567. Narrative returns to reportive validation and chapter ends without closing comment.

CHAPTER 23

285

We Shall Write Here about the Inca's Summons to All the *Huacas*. We Shall Also Speak Here of Maca Uisa's Victory

When Tupay Ynga Yupanqui was king, they say,⁵⁶⁸ he first conquered all the provinces and then happily rested for many years.

But then enemy rebellions arose from some provinces:⁵⁶⁹ those called Alancu Marca, Calanco Marca,⁵⁷⁰ and Chaque Marca.

These peoples didn't want to be peoples of the Inca.

286 The Inca⁵⁷¹ mobilized many thousands of men and battled them for a period of about twelve years.

They exterminated all the people he sent, and so the Inca, grieving deeply, said, "What'll become of us?" He became very downhearted.

287 One day he thought to himself, "Why do I serve all these *huacas* with my gold and my silver, with my clothing and my food, with everything I have? Enough! I'll call them to help me against my enemies."

He summoned them: "From every single village, let all those who have received gold and silver come here!"

288 The *huacas* responded, "Yes!" and went to him.

568. 'They say' supplied to indicate that this chapter lacks the usual introductory passage and starts in reportive -*si* validation. Since the previous chapter lacks concluding comments, this may be the direct continuation of an informant's narrative.

569. *Ilactacunamanta*: *Ilacta*, usually translated 'village', can carry such expanded meanings as 'province', 'country'.

570. The lower-valley village seen as the outer limit of Tutay Quiri's conquests. See chapter 9 (sec. 138) and chapter 12 (secs. 170–171).

571. 'The Inca' supplied. The unspecified third person subject might also be the rebel peoples.

Even Pacha Camac went, riding in a litter, and so did the local *huacas* from the whole of Tauantin Suyu all in their own litters.

When all the village *huacas* had arrived at Aucay Pata,⁵⁷² Paria Caca hadn't yet arrived. He was still grumbling, "Should I go or not?"

Finally Paria Caca sent his child Maca Uisa, saying, "Go and find out about it."

289 Maca Uisa arrived and sat at the end of the gathering on his litter called *chicsi rampa*.⁵⁷³

Then the Inca began to speak: "Fathers, *huacas* and *villcas*, you already know how wholeheartedly I serve you with my gold and my silver. Since I do so, being at your service as I am, won't you come to my aid now that I'm losing so many thousands of my people? It's for this reason that I've had you called together."⁵⁷⁴

But after he said this not a single one spoke up. Instead they sat there mute.

290 The Inca then said, "Yao! Speak up! Shall the people you've made and fostered perish in this way, savaging one another? If you refuse to help me, I'll have all of you burned immediately!"

291 "Why should I serve you and adorn you with my

572. A plaza in the heart of Incaic Cuzco.

573. Guaman Poma ([1615] 1980: 1:313) shows a "second person" or alter ego of the Inca riding in his *chicchi ranpa* or 'gray litter'. The suggestion in section 289 seems to be that the litter embodies Paria Caca's authority and Maca Uisa is his "second person." The teller of this chapter knew the Inca usage; see section 294.

574. This passage and Inca speeches in the following sections appear to afford examples of the teller's idea of how Inca political rhetoric sounded, alternately exalted and brutally threatening.

gold, with my silver, with basketfuls of my food and drinks, with my llamas and everything else I have? Now that you've heard the greatness of my grief, won't you come to my aid? If you do refuse, you'll burn immediately!"

<margin, in Spanish:> [from the hand and pen of Thomás]⁵⁷⁵

292 Then Pacha Camac spoke up: "Inca, Mid-Day Sun! As for me, I didn't reply because I am a power who would shake you and the whole world around you. It wouldn't be those enemies alone whom I would destroy, but you as well. And the entire world would end with you. That's why I've sat silent."

293 As the other *huacas* sat mute, Maca Uisa then spoke up: "Inca, Mid-Day Sun! I'll go there. You must remain right here, instructing⁵⁷⁶ your people and making plans. I'll go and subdue them for you, right away, once and for all!"

While Maca Uisa spoke, a bright greenish-blue color blew from his mouth like smoke.

294 At that very moment he put on⁵⁷⁷ his golden panpipe (his flute was likewise of gold) and he wrapped the *chumprucu*⁵⁷⁸ around his head. His *pusuca*⁵⁷⁹ was of gold, too, and as for his tunic, it was black.

For Maca Uisa's journey the Inca gave him a litter, called the *chicsi rampa*,⁵⁸⁰ made for the travels of an Inca in person.

575. The identity of the scribe(?) Thomás is not known.

576. *carpacuspa* 'instructing': Szemiński (personal communication) suggests that the modern verb *karpay* 'to instruct, to train in mysticism' (Lira [1941] n.d.: 103), although not attested in colonial dictionaries, is a more plausible gloss than one based on *carpani*, that is, 'making your tent' (González Holguín [1608] 1952: 50).

577. *antaricorcan* 'he put on': the verb is not attested in any relevant sense in Quechua dictionaries. Urioste (1983: 183) draws on likeness to *anta* 'copper' to translate as 'he forged'. Arguedas and Duviols (1966: 133) have 'he raised'. Taylor (1980: 157) has 'he played' and (1987b) 'he carried'. We draw on the possibility of an Aru borrowing related to Aymara *hanttacutha* 'to put on' (e.g., a frontlet; Bertonio [1612] 1956: 119).

578. *chumprucu*, probably 'turban'. See chapter 20 (sec. 240).

579. *pusucanri*: untranslated. Possibly related to Aymara *phuscanca* 'thigh or rump' (Bertonio [1612] 1956: 281), suggesting a lower-body garment, or to *phuska* (modern Quechua) 'spindle with whorl'.

580. Like the *chicsi rampa* litter already mentioned

The people called Calla Uaya⁵⁸¹ were chosen by the Inca because they were all very strong.

These people could carry him, in a few days, a journey of many days.

They were the ones who carried Maca Uisa and bore his litter to the battlefront.

295 As soon as they brought him up a hill, Maca Uisa, child of Paria Caca, began to rain upon them, gently at first.

The natives of that country said, "What could this mean?" and began to ready themselves.

296 When they did so, Maca Uisa reduced all those villages to eroded chasms by flashing lightning and pouring down more rain, and washing them away in a mudslide. Striking with lightning bolts, he exterminated the great *curacas* and all the other strongmen. Only a few of the common people⁵⁸² were spared. If he had wanted to, he could have exterminated them all. When he had overpowered them completely, he drove some of the people back to Cuzco.

297 From that time onward, the Inca revered Paria Caca even more, and gave him fifty of his retainers.

The Inca said, "Father Maca Uisa, what shall I give you? Ask me for anything you want. I will not stint."

"I don't want anything," Maca Uisa replied, "except that you should serve as *huacsa* the way our children⁵⁸³ from the Yauyo do."

298 The Inca was deeply afraid when he said this,

(sec. 289), which Paria Caca presumably assigned to Maca Uisa.

581. Guaman Poma ([1615] 1980: 1:305) also pictures the *calla uaya* (Kallawayá) as the Inca's fleet-footed litterbearers. Today a people of this name is still known for wide travels and enjoys special prestige for healing abilities (Bastien 1987; Girault 1984; Saignes 1983). But Cal-lauaya was also the name of an agricultural satellite village of Huarochirí in 1594, according to a petition preserved in the Archbishopric of Lima (Papeles Importantes 3). Whether the two names are related is unknown. See note 604.

582. *atun runacunallas*: *atun runa* 'common people' is more literally 'big man' (or 'person'). This was the Inca bureaucratic term for an able-bodied tribute-paying adult.

583. *ñocaycup churijcuna* 'our children': exclusive first person plural (i.e., children of Maca Uisa and his kin, and not of the Inca). The plural form may express Maca Uisa's self-concept as part of the plural Paria Caca persona.

and answered, "Very well then, father!" He was willing to offer Maca Uisa anything at all, for he thought to himself, "He could destroy me, too!"

299 The Inca then said, "Father, eat!" and had some food served to him, but Maca Uisa replied with a demand:

"I am not in the habit of eating stuff like this. Bring me some thorny oyster shells!"

As soon as the Inca gave him thorny oyster shells, Maca Uisa ate them all at once, making them crunch with a "Cap cap" sound.

300 Since Maca Uisa didn't want anything else to eat, the Inca ordered some of his Inca ladies of the nobility assigned to him; but he didn't agree to that either.

So Maca Uisa went back home to inform his father Paria Caca.

From then on, and for a long time afterward, the

Inca acted as *huacsa* in Xauxa and danced ceremonially, holding Maca Uisa in great honor.

301 They gathered in Cuzco at Aucay Pata square as we mentioned, the *huacas*, all of them.⁵⁸⁴

Among these *huacas* seated there, as we said before,⁵⁸⁵ it was Siua Caña Villca Coto who was the most beautiful of all. None of the other *huacas* could match this one in beauty.

This much we know about them.⁵⁸⁶

584. This sentence appears to have witness validation, but a slight lack of clarity in sentence boundaries makes it difficult to evaluate.

585. Not in fact mentioned before under the name Siua Caña. This allusion may mean that the lovely *huaca* embodying Villca Coto, the mountain that saved humanity (chap. 3), was represented in the Inca pantheon under a personal name Siua Caña.

586. This sentence has witness validation.

CHAPTER 24

302

Next We Shall Write about the Customs of the Checa, the Machua Yunca Festival and Its Dances, and, Finally, about the Origin of the People

When we talked in a different chapter about the children of Paria Caca, we already said a few things about their birth.

The story of their birth and their origin is like this.

Some people say⁵⁸⁷ that there was a wild *quinua*⁵⁸⁸ plant in the vicinity of Upper Paria Caca—the same one that's called *quinua* until today—and that humans emerged from its fruit there.

303 Other people say that blood once fell from the high heavens.⁵⁸⁹

587. Up to this point, including the verb *rimancu* 'say', the passage has witness validation, but it now shifts to *-si* reportive.

588. *quinua*: *Chenopodium quinoa*. "The nutritious seeds of this plant furnish a staple food for a large segment of the native population of Peru, replacing maize in the higher altitudes of the Andes. The red, white, or black seeds are used whole to thicken soup, to make chicha, or to be ground into flour. The ashes of the stalks may be combined with the leaves of coca, a combination that is said to increase the flavor of the latter" (Towle 1961: 36).

589. Chapter 24 owes its complexity to an antiphonal structure. It intertwines two strains of mythology (Yunca and Yauyo) and details a ritual regimen expressing the two groups' coexistence. Section 302 alludes to the origin myth of ancient Yunca *ayllu*-founders seen as the aboriginal precursors of Checa society. In ancient times, when the heights were all under Yunca power, these were born of the high-altitude *quinua* plant. Section 303 alludes to the origin of the blood-born invader groups who would impose themselves by conquest and inmarriage. In the rest of chapter 24 we learn that the blood-born groups from Vichi Cancha, who invaded Checa lands and defined the genealogy of Paria Caca so as to exalt their own mummified heroes (especially Tutay Quiri; chap. 12, sec. 167),

It hit the ground at the spot called Vichi Cancha, in the area of that same *quinua*.

304 There the founders⁵⁹⁰ established their villages:

Coña Sancha, founder of the Allauca,
Yuri Naya, founder of the Sat Pasca,
Chupa Yacu, founder of the Sulc Pahca,

nonetheless retained the mummies of the ancient *quinua*-born Yunca founders (sec. 341; chap. 9, sec. 115) and were concerned to claim linkage with them as a sign of legitimacy. Yunca privileges appear to be a continuing source of anxiety for Tutay Quiri's descendants and Paria Caca is made to chasten the haughty Yunca *ayllu* of Caca Sica for slighting their Yauyo in-laws (secs. 305–314). The invader groups putatively descended from Tutay Quiri claimed to have taken over and preserved the Yunca founders' names, rights, and *huacas* wholesale (sec. 316). *Quinua*-born *ayllus* like Caca Sica, which were permanently considered Yunca (perhaps because they contained Yunca people or perhaps only because they had obtained the old Yunca titles), enjoyed priestly privileges and danced the role of Yuncas in the Machua Yunca rites (secs. 327–340) as well as taking prominent part in Paria Caca's ceremonies; other rites (secs. 316–326) celebrated the invader-heroes. The unifying theme of this chapter is the ritual arrangement that in Checa joined the Yunca inheritance, symbolizing legitimacy, to the power-oriented ritual of blood-born *huacas* affiliated (perhaps only after the remembered invasions) with Paria Caca.

590. 'The founders' supplied; subject of *llactachacoran* 'they founded' unspecified. An important fragmentary note by Avila, accidentally included in his trial record and interpreted by Taylor (1987b: 353), clearly identifies three of these (Chupa Yacu, Yuri Naya, and Chauca Chimpita) as founding heroes of San Damián—area *ayllu*. They were described as "grandfathers" ceremonially fêted and clothed, that is, mummies. They were still extant c. 1608.

Paco Masa, founder of the Yasapa,
Chauca Chimpita, founder of the Muxica,
and, as founders of Caca Sica, those Yunca⁵⁹¹ we have
called Huar Cancha and Llichic Cancha.

All these, the actual founders of the village, were
Yunca people.

<margin, in Spanish:> [Huari Cancha Llichic Can-
cha were Yunca.]

305 The others, the Morales of Caca Sica and also the
forefathers of the Cancha Paycu, were Yauyo.⁵⁹²

<margin:> [Morales Yauyo]

Their place of origin is called Maurura,⁵⁹³ in the
Aya Uire⁵⁹⁴ area.

These people, who used to roam around as
wild⁵⁹⁵ nomads, married the sisters of Huar Cancha.
“We and our in-laws will work things out among
ourselves within the community,” they said, and
they settled down in this village.

306 When these people went to worship Paria Caca,
their in-laws and all the Checa insulted them, call-
ing them “Yauyo wildmen,” so they used to go last,
lagging way behind.

Since they suffered miserably when these people
insulted them like that, they tagged along in the
rear for a great many years.

“Father,” they told Paria Caca on one occasion,
“here’s how it is: these people,⁵⁹⁶ they and the
Checa, insult us all the time. And we’re your own
creatures, even if we’re Yauyo people!” They cried
bitterly as they told this.

307 Then and there Paria Caca gave his command:

591. Original has *yañcacuna*; since these groups are
elsewhere said to be *yancas* (chap. 17, sec. 218), the
translation ‘*yanca*’ would be tenable here. But the next
marginal note indicates the meaning here as Yunca.

592. The point being that the Caca Sica *ayllu* (chap. 9,
sec. 118; chap. 17, sec. 216), although of ancient Yunca
origin, had within it a Yauyo group called Morales. Re-
cently in-married and of foreign stock, they were scorned,
as succeeding sections tell.

593. Maurura may be Malleuran, a hamlet north of
Ayaviri, 3,346 m above sea level in Yauyos Province (IGM
1970–1971).

594. A modern town called Ayaviri is 29 km south-
southeast of Huarochiri in Yauyos Province (IGM
1970–1971).

595. As in the name of Quita Pariasca (chap. 18, sec.
221), the word *quita* ‘wild’ alludes to the qualities of un-
tamed or skittish animals.

596. Meaning: the Yauyos’ immediate in-laws?

“Children, don’t grieve. Take with you this, my
golden headdress. You must dance holding it up in
Llacsá Tambo, at the place called Poco Caya. Then
they’ll say, awestruck, ‘What people are these?
They’re the beloved of Paria Caca!’ From that time
on they won’t insult you so.”

308 And so when the Yauyos arrived in the rear of
the Checa, carrying that golden headdress of Paria
Caca’s, jubilant, the other people were seized with
fear.

The next day, the Yauyos danced and sang hold-
ing up the golden headdress while everybody in
that place stood awestruck.

309 Some others say this:⁵⁹⁷ in the old days, people
used to go to consult Paria Caca at night, taking
along llamas or other things.

They used to go taking turns, *ayllu* by *ayllu*.

Even though at that time they deeply scorned
the ones called “wild Yauyos,” they said, “Let them
carry offerings,⁵⁹⁸ too.”

The Yauyos did take them but they arrived at
Paria Caca when the sun was already rising.

310 Because they were grieving bitterly, Paria Caca
said, “Why are you so distressed, O Anta Capsi?”
(Their old name had been Pacuyri.)

Then and there Paria Caca bestowed on them his
gift, saying, “Take along this golden headdress.
When people see it they’ll no longer scorn you.”

311 On one occasion they went to worship Paria
Caca, carrying along the golden headdress.

But while they were crossing the river called Pari
Ayri they dropped it.

They searched for it like anything, all the way
upstream and downstream. But it didn’t turn up, so
they went to Paria Caca without it.

312 When they arrived on the morrow, the golden
headdress stood there right at Paria Caca’s side.

Although they begged for it in tears, he refused.
Rebuking them harshly, Paria Caca said, “You
didn’t win it in victorious warfare, that you should
go around showing it off everywhere so boastfully,
and even bringing it here, thinking, ‘We’ll show it
to the one who gives us power, to our maker.’ ”

597. Witness validation up to the colon, then *-si*
reportive.

598. ‘Offerings’ supplied.

313 “Father, are we to be humiliated so?” they cried bitterly. “Please, return it to us or give us something else instead.”

“Children,” replied Paria Caca, “go back. I’ll give you something during my sister Chaupi Ñamca’s festival. Wait until then.”

And so back they went.

314 And as he’d foretold, on Chaupi Ñamca’s festival, in the courtyard called Yauri Callinca, on top of the wall, a very beautifully spotted wildcat appeared.

When they saw it, they exclaimed joyfully, “This is what Paria Caca meant!” and they held up its skin as they danced and sang with it.

(Hernando Cancho Uillca, who used to live in Tumna, was in charge of it.

But by now it’s probably gone all rotten.)⁵⁹⁹

315 We’ve already spoken about the origin of the people.⁶⁰⁰

Those whom we mentioned are said to be Tutay Quiri’s children; the others are known to have come forth from the fruit of a tree.⁶⁰¹

As for Tutay Quiri, they say he was born in Vichi Cancha.⁶⁰²

Later on, he came and overpowered all the villages of this area, saying, “My children will live here!”

316 As we said in another chapter, this land was once all full of Yunca. As soon as Tutay Quiri’s children⁶⁰³ had expelled those Yunca, they began to distribute among themselves, according to their own

ayllus, the fields, the houses, and the *ayllu* designations.⁶⁰⁴ Their names, by *ayllu*, were:

Allauca
Sat Pasca
Pasa Quine
Muxica
Caca Sica
Sulc Pahca
Yasapa.⁶⁰⁵

When we say Yasapa we mean silversmiths. They were silversmiths.

And as they bear that group’s name, likewise so do the other *ayllus*.⁶⁰⁶

317 Then, after sharing the villages out among themselves, they received their *huacas*, ranking them from Allauca downward:

The Allauca received Maca Calla.

The Sat Pasca, we know,⁶⁰⁷ received Quimquilla.

This Quimquilla was considered to be⁶⁰⁸ a *curaca* among *huacas*, and for this reason was esteemed more than any other.

318 Next, the Sulc Pahca and the Yasapa received the *huaca* called Ricra Huanca.

The Muxica received Quira Raya.⁶⁰⁹

The Caca Sica received the *huaca* named Llucma Suni.

The Huanri and the Chauti were in fact⁶¹⁰ the actual natives of the village from early times.

599. The first sentence of the parenthesis has witness validation and the second -*si* reportive.

600. This sentence has witness validation. A different version of how invaders took over the system created by the *quinua*-born founders begins here. This version centers on cults of mummified or preserved heroes of invasion: Tutay Quiri (see note 601), Ñan Sapa (secs. 319–323), and Chuta Cara (secs. 324–326).

601. That is, the above-mentioned Yauyos are Tutay Quiri’s children, while those who scorned them were of the *quinua*-born Yunca founding *ayllus* (sec. 302). ‘Said to be’ supplied to indicate reportive validation, which immediately gives way to witness validation (‘are known to have’).

602. That is, Tutay Quiri is of the blood-born (sec. 303). ‘They say’ supplied to indicate reportive validation, which continues through the second sentence of section 317.

603. ‘Tutay Quiri’s children’ supplied.

604. That is, the conquerors not only seized the wealth of the vanquished, but even organized themselves according to the pattern and terminology of preexisting autochthonous society. A lawsuit of 1594 explains that *ayllu* Callaguaya of Huarochirí (see chap. 23, sec. 294) took on this name by displacing a Yunca group of the same name (Archivo del Arzobispado de Lima, Papeles Importantes 3, f. 10r). See note 581.

605. This list of captured categories differs in order but not in content from the list associating these groups with their respective ancestral Yuncas in section 304.

606. *chaypac sutintatacsi paicunapas apan ynatac huaquinin aylllocunapas* ‘And as they bear that group’s name, likewise so do the other *ayllus*’: may mean that the other captured names, like Yasapa, imply specializations.

607. This sentence has witness validation.

608. ‘Considered to be’ supplied to indicate reportive validation of this sentence.

609. This sentence has witness validation.

610. ‘In fact’ supplied to indicate witness validation in this and the following sentence.

In a different chapter we already told how they worshiped Tutay Quiri.⁶¹¹

- 319 So, as we've said, as soon as Tutay Quiri finished his conquests, his children came here and danced their dance of origin, just as they'd once danced it in Vichi Cancha.⁶¹² They danced and sang, calling the rite Masoma. The one called Ñan Sapa was a human being.⁶¹³

Later on, the Inca took away the *huaca* himself.⁶¹⁴

But they made another one to be his proxy.

This is the one that we know Señor Doctor Francisco de Avila carried away.⁶¹⁵

- 320 They say Ñan Sapa, when he was human, wore the *quisay rinri*⁶¹⁶ in his ears and bore the *canah yauri*⁶¹⁷ scepter in his hands.

In ancient times, these were made of pure gold. The Inca carried off that gold.

His staff was named Engraved Rod.⁶¹⁸

And the seashell named *cori cacya* came with it.

- 321 Saying, "He is our origin; it was he who first

came to this village and took charge of it," people flayed his face⁶¹⁹ and made it dance as if in his own persona.

If they captured a man in warfare, they would first flay his face, and then make it dance, saying, "This is our valor!"

And when a man was taken prisoner in war, that man himself would say, "Brother, soon you'll kill me. I was a really powerful man, and now you're about to make a *huayo* out of me. So before I go out onto the plaza, you should feed me well and serve me drinks first."⁶²⁰

- 322 Obeying this, they'd offer food and drinks to the other *huayos*, saying, "This day you shall dance with me on the plaza."

They actually⁶²¹ used to bring out the *huayos* and carry them in a litter for two days. On the following day, they'd hang them up together with their maize, potatoes, and all the other offerings.

- 323 About this hanging of *huayos*, people remarked,⁶²² "The *huayos* will return to the place where they were born, the place called Uma Pacha,⁶²³ carrying these things along with them."

611. See chapter 11 (sec. 161). Though not of invader stock and not resident in Checa, these groups take part in many Checa rites (see chap. 20, sec. 239), including those of Tutay Quiri. The next four sentences have reportive validation.

612. Vichi Cancha: where blood fell and invader groups originated (sec. 303).

613. Possibly meaning that this *huaca* consisted of a human mummy, that of a key ancestor. His cult is apparently one component of the "dances of origin" by which invader lineages commemorated their ties to the mummified founders (sec. 304).

614. This may refer to the Inca custom of removing important local *huacas* for inclusion in the Cuzco pantheon, which is the theme of chapter 23. "The *huaca*" supplied.

615. The removal of the original *huaca* by the Inca is validated with reportive but the removal of its substitute by Avila is witness-validated ('we know').

616. *rinri* 'ear' indicates this was a specific type of ear-spool. "They say" supplied to indicate reportive validation, which continues through the first sentence of section 322.

617. *yauri* (González Holguín [1608] 1952: 347) means 'scepter' or possibly 'lance'.

618. *quillcas caxo* 'Engraved Rod': a marginal note (supp. II, sec. 480) tells us that *caxo* meant a stick; *quillcas* means 'painted', 'inlaid', or 'engraved'. Avila himself described this object as "a copper spear engraved with various designs" that functioned as a *huaca* in its own right ([1645] 1918: 67).

619. *oyanta cochuspa* 'flayed his face': that is, made a sacred mask that would conserve the persona of the fallen or sacrificially killed hero (and not as torture of the living). *Huayo* in the next passage means, as a 1609 Jesuit report (Arguedas and Duviols 1966: 247) explains, a human face prepared as a mask "with its actual skin and bone." When the preserved face was displayed in a dance, it received offerings of llama fat in return for sharing its vital powers.

620. The point appears to be that when a captive faced sacrifice, he asked that, both immediately before his death and ever afterward when transformed into a face-mask, he always be duly fêted before entering into his conquerors' ceremonies.

621. 'Actually' supplied to indicate witness validation in this and the next sentence.

622. This sentence and the next have reportive validation.

623. Uma Pacha, we learn in section 324, was apparently a *huaca* who came from Vichi Cancha, and represented the origin of a group that saw itself as derived from the blood fallen at Vichi Cancha (sec. 303). In chapter 31 (sec. 403), the invaders' union with the Yunca autochthones of Checa is cemented when the surviving Yunca boy Yasali becomes priest of Uma Pacha and serves the blood-born groups derived from Vichi Cancha.

But Uma Pacha is probably a generic category of *sacra* (from the Jaqi word *uma* 'water'), associated with high lakes and seemingly imagined as sources at which bio-

They would speak with a different pronunciation when they addressed one another, twisting their mouths to one side.⁶²⁴

During Ñan Sapa's festival, we know they carried on dancing for five days, and the Allauca did the same.⁶²⁵

324 In another place, there was said to be someone called Chuta Cara, also known as Uma Pacha.⁶²⁶
<margin:> [Masoma Chuta Cara]

He himself had come from Vichi Cancha along with the others.

He existed as a man and congealed into stone.

He still held the sling he'd used as a human being, and his *visa*⁶²⁷ was decorated with likenesses of birds.

325 And then there was the *huana paya*, a conch trumpet; when he blew it, the local *huacas*⁶²⁸
<margin, in Spanish:> [Means 'idol'.]
would divide up the llama herds.

He emerged with that very object.

It was because of the llamas that some people conserved *huana paya* conch trumpets.

logical vitality is renewed. The mostly Yunca-oriented Machua rite also addresses it (sec. 335). The ethnographers Valderrama and Escalante (1988: 187–189) suggest that the shrine today called Umahala in the Colca valley belongs to the same class as ancient *oma pacha*.

624. In modern Quechua folk ritual, people performing as mythic personages often speak in unnatural ways (especially falsetto). But another reading is possible. Since González Holguín ([1608] 1952: 304) gives "*simicta qquencuchini* to twist one's words toward another matter, or not to say plainly and truthfully what one has heard," *chaysi rimacospapas huc rimaytatac simintaca hucman quincochispa rimac carcan* might be read 'when speaking of this, they used to give a different version, distorting their testimony'. The point would then be that, prior to Avila's research, natives dissembled about the tradition of rites involving human trophies. Or, less probably, the sentence might simply mean that other people recount other versions.

625. This sentence has witness validation ('we know' supplied).

626. The narrative now turns to a third formerly human *huaca* who led the invaders from Vichi Cancha. 'Was said to be' supplied to indicate return to reportive validation.

627. *visa* untranslated. 'Shield'?

628. *llactacuna* in original appears to mean 'villages' or 'settlements'. But, as the marginal note clarifies, it is used here to designate the local deities who were understood as the patrons of human settlements.

We know people from Allauca used to perform these rites at the festival of Chuta Cara.⁶²⁹ As llama owners, the Checa and the Concha and whatever other people also display those conch trumpets.

326 And it's known that⁶³⁰ they danced these same rites for two years, just one time per year.

Therefore, since the ritual cycle lasted two years, they performed the dance only twice in all.

After that, they danced the dance named Machua for two years.⁶³¹

327 The people who, as we said before, had Yunca names⁶³² were the ones who danced for two years in Machua festival season.

Braiding⁶³³ some straw called *chupa*, as they say,⁶³⁴ and tying together a lot of wooden slats,

629. Could also mean the rites were performed in order from Allauca downward (sec. 317). 'We know' supplied to indicate witness validation in this and the next sentence.

630. 'It's known that' supplied to indicate witness validation in this and the following three sentences, which form a passage about the calendric organization of dances.

631. The succession described appears to be an alternation of two-year cycles:

	year 1 First <i>mita</i> of Chuta Cara
CYCLE A	year 2 Second <i>mita</i> of Chuta Cara
	year 3 First <i>mita</i> of Machua
CYCLE B	year 4 Second <i>mita</i> of Machua
	year 5 First <i>mita</i> of Chuta Cara
CYCLE A	(and so forth).

632. That is, the groups that in section 316 were said to have received the names of pre-existing Yunca groups and taken over their *huacas*. The overall sense is that the Checa community, which was formed by conquest and intermarriage between blood-born invaders from Vichi Cancha and *quinua*-born Yunca aborigines, alternated between two-year periods in which it celebrated Vichi Cancha origins (e.g., in the Masoma rites honoring Ñan Sapa and Chuta Cara as just described) and two-year periods for the rites now to be described, which are rich in Yunca symbolism.

633. *pirtaspas* 'braiding': Taylor (1987b: 381) originated this reading, still conjectural but warranted by *piltay* 'to braid' in modern Tarma and Ancash Quechua.

634. 'As they say' supplied to indicate return to reportive validation, which continues through the second sentence of section 328.

they'd bind⁶³⁵ two effigy bundles around with the straw.

The height of these bundles was seven and a half armlengths.

Their girth was about what we could hold in a two-armed embrace. On these effigies' heads they'd put some wild straw named *casira*.⁶³⁶ It has bright red roots. "It's their hair," they'd say.

328 Once they'd prepared everything, they named one of the effigy bundles Yomca and set it as a target symbolizing males.

The other, the one called Huasca, they set as a target symbolizing females.⁶³⁷

After they set them up, the men would put on their best clothing and feather ruffs called *tamta*,⁶³⁸ and they'd begin to let fly at the targets.⁶³⁹ Their spear was called *vihco*.⁶⁴⁰

329 We know that on the day before this spear-throwing everybody used to go to the *caullamas*.⁶⁴¹ They brought their llamas along adorned with bells and earrings, just as they did on their way to Paria Caca.

All the people would reportedly⁶⁴² go to Chau-calla and to the mountain of Tambo Sica, named Curri, each going to his respective *caullama*.⁶⁴³

635. *pilluic carcan* 'they'd bind': on the assumption that *pilluic* is an agentive form, erroneously or irregularly written, of *pilluy* 'to bind', and not related to *pilluini* 'to swim' (González Holguín [1608] 1952: 285).

636. Unidentified.

637. Taylor (1980: 171) has observed that the terms *yomca* and *huasca* may be interpretable in the light of "Aymara-type transformations which characterize the text." If affected by the same metathesis that causes *ñamca* to appear at times as *ñamoc*, *yomca* might be *yumac* 'inseminator' (i.e., patrilineal progenitor). Adducing an additional southern Quechua shift, Taylor suggests *Huasca* might be interpreted *huachac* 'one who gives birth' (perhaps implying 'matrilineal ancestress').

638. *tamta* 'feather ruff': same word occurring in chapter 5 in the name of the opulent Tamta Ñamca (see Arriaga [1621] 1968: 50; Keating's translation).

639. 'At the targets' supplied. The sentence has witness validation.

640. *vihco*: an otherwise unattested word, perhaps related to modern *wikch'uy* 'to throw'. 'Their spear' supplied.

641. *caullama*: Arriaga ([1621] 1968: 29; Keating's translation) says a *caullama* was a household deity guaranteeing fertility of livestock. This sentence and the next have witness validation ('We know that' supplied).

642. 'Reportedly' supplied to indicate reportive validation of this and the next sentence.

643. Hernández Príncipe ([1613] 1919: 184) says rights

As they traveled to their *caullamas*, they'd go along blowing the conch trumpet, making it re-sound again and again.

It was in fact⁶⁴⁴ for this purpose that each of these people and some who just chanced on them⁶⁴⁵ would carry and display these conch shells.

330

<margin:> [*chuta*]

As soon as they'd erected the two *chutas* they began to throw the spears.

They say that⁶⁴⁶ while the people threw spears, while they entered into competition hurling spears *ayllu* by *ayllu*, the women would dance without drums and chant these words:

"Receive your poor forlorn children!"

And to the Huasca effigy, they'd likewise say,

"Receive, too, your poor forlorn children!"⁶⁴⁷

331 If these spear throwers hit the *chuta*'s hair, then whichever person was in charge⁶⁴⁸ advanced them into the top rank ahead of all the other *ayllu* members.

Then he'd⁶⁴⁹ bring a macaw wing or any such thing and give it to the *yanca*.

332 (The *yanca* of the Checa afterward is known to

in each *caullama* were inherited as a *mayorazgo* (i.e., a privilege descending in primogeniture).

644. 'In fact' supplied to indicate witness validation of this and the next sentence.

645. *taricnincunaca* 'who just chanced on them': more literally, 'their finders'; it is not clear whether this means finders of conch shells or those who happened to meet people on the procession.

646. 'They say that' supplied to indicate reportive validation, which continues through the end of section 331.

647. In the invocations to both the male-engendering and the female-bearing effigies, the word for 'child' is *churi*, 'child of a male'. In ordinary speech the child of a female is called *huahua* and not *churi*. It sounds as though both effigies are being addressed as fathers. One possible explanation of the anomaly would be to take *churi* as the "unmarked" term, including all forms of parentage not specified as uterine mother-child tie and therefore including figurative or symbolic motherhood. Alternatively, one might take the two effigies as being in fact both male, one the father of males and the other of females.

648. 'Was in charge' supplied.

649. Or 'she'd'. Whether an officiant or the successful lancer brought it is not explicit. The implication may be that the macaw wing was given to a *yanca* representing the victorious *ayllu*.

have been⁶⁵⁰ Martín Misa Yauri, and the late Juan Chumpi Yauri was that of the Allauca.)

- 333 After one *ayllu* finished throwing, the *yanca* would reportedly⁶⁵¹ shin up the *chuta* effigy carrying the macaw wing called *puypu*.

He'd pull out the *vihco* spear and stick the macaw wing in where it had hit, to mark the spot.⁶⁵²

Then another *ayllu* would compete, and then still another, and so forth.

- 334 Then they threw spears at the Huasca effigy for females, saying,
 "She'll give me daughters and all kinds of food!"
 and then at the Yomca effigy, saying,
 "He'll give me sons, agave fiber goods,⁶⁵³ and all kinds of animals!"

- 335 When they'd finished throwing spears at both *chuta* effigies, the contestants who'd hit the hair or the part called the "eye" would present one of their llamas to the *yanca* and say, "With this offering, speak on my behalf to Uma Pacha."

Regarding this small llama, the llama-owner wouldn't take away much of it.⁶⁵⁴ No matter how many llamas there might be, it was only those who'd been ordained *yanca* who could take them away and eat them.

- 336 Very early the next morning, we know,⁶⁵⁵ all the people would go to Quimquilla.

650. 'Is known to have been' supplied to indicate witness validation of this sentence.

651. 'Reportedly' supplied to indicate reportive validation, which continues through the end of section 335.

652. The figure of Tamta Namca, whom Huatya Curi cured in chapter 5 when all the land was Yunca, shares some of the symbolism of this section and its motif of Yunca-derived ceremony. His name Tamta alludes to the ceremonial garment *tamta* (sec. 328), and his roof decorated with macaw wings resembles the straw effigy similarly decorated here. Contests played for ceremonial rank form the climax of his story as of this rite. A 1609 Jesuit report describes a different ritual game of skill employing feather decorations and Yunca costumes (Arguedas and Duviols 1966: 247).

653. *chauracta* 'agave fiber goods': based on "*chhu-huar cabuya*" (González Holguín [1608] 1952: 92). *Cabuya* or agave fiber is widely used to make rope, coarse sandals, harnesses, and so forth. Taylor (1987b: 386) explains the discrepancy between *-racta* and the expected *-rta* as an "Aru [i.e., Jaqi] influence."

654. *anchantaca* 'much of it': given the information in the next sentence, it is tempting to read *anchantaca* as an error for *aychantaca*, 'its meat'.

They say⁶⁵⁶ this *huaca* called Quimquilla owned a whole lot of llamas and all sorts of other possessions.

"He'll favor me with some of that wealth!" thought all the people, including the Allauca, as they went along. "I'll ask for some llamas for myself there."

- 337 On their way there, they used to carry a small amount of their *ticti*, maize beer, and coca leaf, and they made the *huana paya* conch trumpet resound over and over.

On the first day, those of the *vichoc* moiety⁶⁵⁷—that is, all the Sat Pasca, the Sulc Pahca, and Yasapa—would dance at Quimquilla shrine itself, chanting,
 "We flourish!"
 as they slaughtered their llamas.

- 338 Then, as we know,⁶⁵⁸ they went down to the flat land that lies above the place where Quira Raya was located.⁶⁵⁹

(This plateau is called Huara Caya.)

Then, just as they'd erected Yomca and Huasca effigies in Llaca Tambo, so also they set up *chuta* effigies the same way here, this time for llamas.

655. 'We know' supplied to indicate witness validation of this sentence.

656. Return to reportive validation, which continues through the end of section 337.

657. *vichuc maricuna* 'those of the *vichoc* moiety': *ichoc* is the usual term complementary to *allauca*. Chapter 11 (sec. 157) has *allaucam ari vichocam ari*, which we translate as 'both the *allauca* moiety and the *vichoc* moiety'. If this is emended to *allaucamari . . . vichocamari* (as in Taylor 1980: 94), *vichuc maricuna* here becomes clearly intelligible in moiety terms. Referring back to sections 304 and 316 would yield a system under which *vichoc* Checa includes the three *ayllus* named here, and *allauca* Checa includes Allauca, Muxica, and Caca Sica.

There are other possibilities: *vichuc mari* might be the name of an otherwise unattested group comparable with Sat Pasca and the others. Or *vichuc* might be an agentive form of a verb derived from *vihco*, the ceremonial spear (sec. 328). None of these account for the otherwise unknown word or morpheme *mari* (which seems also to occur in the name of Paria Caca's last or next to last "son" Sasin Mari; see chap. 9, sec. 113; chap. 12, sec. 166).

658. 'As we know' supplied to indicate witness validation, which continues through the first sentence of section 340.

659. Quira Raya may be the name of a settlement destroyed by *reducción*, the forced resettlement of the 1580s, or of a *huaca*.

They threw their spears for llamas, both males and females.

- 339 At the end of the spear throwing, they used to give their llamas to the *yanca* just as they had in Llacsá Tambo, saying, "Worship on my behalf and I shall be well."

On their way back here, they'd travel all in a group, just as when they went away to Quimquilla; they came back hauling their llamas adorned with bells.

- 340 They call this journey the Carco Caya. About the way they traveled, with a slow and undulating motion,⁶⁶⁰ people said, "We're rounding the Huaroca."⁶⁶¹

660. *coyoi coyoilla* 'with a slow and undulating motion': might also be read 'just barely moving'.

661. Untranslated; the verb *tumani* denotes circular motion so it may be the name of a round monolith or hill. Or if Huaroca is not a proper noun but a variant of the similar word meaning 'sling', the phrase might be a metaphor for a swinging motion like that of a sling.

As they rounded the Huaroca, they'd go along blowing the *huana paya* conch trumpet over and over again.

This is all we know, all we know about the Machua festival.⁶⁶²

- 341 About these Yunca populations in Llacsá Tambo, some people say, "They were reputedly Muta Caya people."

"They were Colli," others say.⁶⁶³ Just so. But the ones we referred to as Colli resided in Yaru Tini.⁶⁶⁴

In what follows we'll write about this group's life.

662. This sentence and the remainder of the chapter have witness validation.

663. The issue is whether the Yunca people resident in Checa lands were members of the Yunca polity of Collique (near Lima) or of the (otherwise unknown) Muta Caya. Both contrasting opinions are expressed with reportive validation ('reputedly'); that is, the people cited contrary traditions.

664. Yaru Tini may be modern Yelutina, 15 km northwest of San Damián (IGM 1954), a high location far from the coast.

CHAPTER 25

342

Here We Shall Write How the Wind Blew the Colli People from Yaru Tini Down to the Lower Yunca⁶⁶⁵

The native people whom we call Colli are said to have⁶⁶⁶ resided in Yaru Tini.

One day Paria Caca arrived in Yaru Tini, their village, while the Colli were drinking.

Taking a seat at the far end of the banquet, Paria Caca sat there like a poor miserable stranger.

343 Not a single person was willing to offer him a drink.

Only one man finally invited him to drink.

"Give me some more, brother," said Paria Caca to the one who'd offered him the drink.

The man gave him more.

Paria Caca then asked, "Please give me a quid of your coca leaf."

The man⁶⁶⁷ gave it to him.

344 Paria Caca said to him, "Brother, when I come back here, you'd better hold on tight to this tree. Don't tell these people anything. Let them have their fun." Then he went away.

345 Five days later, a violent wind rose up.

This wind whirled every single person of the Colli head over heels two or three times and whisked them off into the far distance.

When it swept them off, some of them wandered around disoriented and died.

665. This myth appears related to chapter 11 (sec. 155), which alludes to the expulsion of some Colli Yunca to lands bordering Carhuayllo.

666. 'Said to have' supplied to indicate reportive validation, which continues through the end of section 346.

667. 'The man' supplied.

Others the wind brought alive to a mountain in the vicinity of Carhuayllo.

This mountain is called Colli mountain up to today. The people of the mountain, however, have perished. Not one of them is left.

346 But that one man who'd given Paria Caca a drink in Yaru Tini hung onto the tree as he'd been told, and was spared.

When Paria Caca was finished sweeping everything away, he said to him, "Brother, now you're alone by yourself. You must stay here forever. Later, when my children come to worship me from this spot, a quartet of guest *huacsas*⁶⁶⁸ (that means four)⁶⁶⁹ will provide coca leaf for you to chew in perpetuity.

"As for your name," he added, "you shall be

668. *corpaya huacçacuna* 'guest *huacsas*': the sense is uncertain; *corpaya* may be derived from "*ccorpa* guest" or (less probably) "*ccorppa* clod or clump of turf" (González Holguín [1608] 1952: 69); *-ya* remains unexplained. That they number four is also odd. This myth does not seem relevant to Incaic fourfold (*tahuantin*) organization, while five and its multiples usually signify plenitude in Paria Caca's mythology.

669. *chusco quiere dezir quatro* 'a quartet . . . (that means four)': this Spanish explanatory parenthesis indicates that someone—teller, translator, scribe, or editor—expected the audience to be unfamiliar with *chusco* 'four', a word common in the Andean north but different from the usual south Andean word *tahua*. The translation uses the Latinate word 'quartet' to contrast with more familiar 'four' and thereby suggest the feeling of lexical discrepancy.

called Capac Huanca."⁶⁷⁰ And he froze the man⁶⁷¹ into stone.

347 When Señor Doctor Avila came to the very spot

670. *Huancas* were and are *huacas* in the shape of monoliths; *capac*, the opposite of *huaccha* 'poor and friendless', means 'rich and influential'. Like chapter 24, this story explains in mythic terms how the conquest of the Yunca who once occupied the heights resulted in retention of Yunca *huacas*.

671. 'The man' supplied.

where Capac Huanca dwelled, he in fact⁶⁷² broke the *huaca*⁶⁷³ with some other people's help.

After he broke it, he heaved it downhill.

This much we know about the people called Colli.

And so, exactly according to Paria Caca's command, the *huacsas* yearly provided that *huaca* with coca to chew forever.

672. 'In fact' supplied to indicate witness validation of this sentence and the remainder of the chapter.

673. 'The *huaca*' supplied.

CHAPTER 26

348

How Paria Caca Defeated Maca Calla. How He Established His Children after His Victory⁶⁷⁴

We know⁶⁷⁵ that Maca Calla lived on a mountain overlooking the village of San Damián.

It was on this Maca Calla mountain that the aboriginal people of that village reputedly⁶⁷⁶ lived, the ones called Pihcca Marca.

The ones called the Sutica are known to have⁶⁷⁷ lived there, too.

One day while these villagers were drinking, they say,⁶⁷⁸ Paria Caca arrived in the village.

Arriving, he sat down at the far end of the banquet.

349 As he was sitting there, not a single person offered him a drink.

Paria Caca got angry, and so, five days later, he rose up as red rain and yellow rain and exterminated that village.

350 Some people tell another story.⁶⁷⁹

They say⁶⁸⁰ some of the aboriginal villagers in

Maca Calla were playing with the hunting *bolas*. Others were drinking.

Meanwhile, a little puff of fog⁶⁸¹ appeared out of the high mountain called Canlli.

And then, little by little, some rain, a red rain, started to fall.

Then lightning began to flash.

351 Everybody got scared when these things happened. "What's this?" they wondered, never having seen anything like it.

Some said, "It's the enemy!" and took a defensive stand.

Others ran away.

352 One was a man called Armicu.

He had lots of children, and rousing them, he cried, "Come on, let's go, let's go and die on our own field!" They ran away to their field.

When they arrived at their field, he⁶⁸² froze them and turned them into stone.

That man who turned to stone stands there still, like a man with his children. Even today people call them the Armicu.

353 Some people tried to escape, but wherever they fled the red rain caught up with them. Right on the spot they turned to stone.

The rest of the people back in Maca Calla also froze into stone the same way.

354 Weeping bitterly, one man of the Sutica *ayllu*

681. *aslla pucutay* 'a little puff of fog': 'fog' supplied, -*tay* unexplained.

682. Reference unclear; could be Paria Caca or Armicu.

674. This chapter expands on how the Allauca 'received' Maca Calla (chap. 24, sec. 317).

675. San Damián de Checa is a *reducción* village on the Lurín headwaters at 3,235 m above sea level 22 km west-northwest of Huarochirí (IGM 1970–1971). This sentence has witness validation.

676. 'Reputedly' supplied to indicate reportive validation.

677. 'Are known to have' supplied to indicate witness validation of this sentence. The remainder of sections 348 and 349 have reportive validation ('they say').

678. 'They say' supplied to indicate reportive validation, which continues through the end of section 349.

679. This sentence has witness validation.

680. 'They say' supplied to indicate reportive validation, which continues through the fourth sentence of section 357.

said, “Maca Calla, my only father, will it be my lot to up and leave you, just like that? I have to get away right now. There’s no more force left in me to overcome this miracle.”⁶⁸³ While he wept, Maca Calla’s head fell down right before him.

He picked the head up where it fell, and made it fly away instantly transformed into a falcon.

This man was imbued with a mighty shamanic power!

355 Maca Calla was just like a man, with a head, feet, and hands.

So, after he made the head escape, the man settled again on five mountains in Llantapa⁶⁸⁴ and multiplied.

683. *milagrocta* ‘miracle’: usage of the Spanish term ‘miracle’ to signify a disastrous supernatural retribution is characteristic of Andean writing in this period. Felipe Guaman Poma de Ayala ([1615] 1980) consistently assimilated it to the Andean idea *pachacuti* ‘world-changing disaster’.

684. Perhaps the suggestion is that the five members just mentioned—head, feet, and hands—reconstituted themselves as the five parts of Pihcca Marca. Llantapa mountain was one end of the mythic bridge over the Lurín valley (chap. 5, sec. 73).

685. Pihcca Marca means ‘Five Settlements’. This may refer to a five-peaked mountain called Cerro Cinco

We call the mountains where he settled, where he built the villages, Pihcca Marca.⁶⁸⁵

356 Maca Calla’s head exists in Pihcca Marca until today.

The people there say, “Here, we have Maca Calla’s protection,” and they call their firstborn children Canricha. Likewise the Allauca, who are also members of a community affiliated with Maca Calla, call them Canricha just as the Pihcca Marca do.⁶⁸⁶

357 Later, Tutay Quiri went and conquered them.

During that time, the *ayllus* called Sutica returned to this area. “We’ll go and settle amid our fields and our land, amid our villages. We’ll fear and revere Paria Caca and Tutay Quiri,” they said, and they came back.

In the village of San Damián the Sutica are now completely extinct.⁶⁸⁷ Their survivors are in Sucsa Cancha, in Tumna.

Cerros (‘Five Hills Hill’), visible from San Damián and identified locally as the site of an extinct community.

686. See chapter 24 (sec. 317).

687. Like the genealogical part of chapter 31 (secs. 443–446) this passage apparently alludes to the extinction of whole named corporate groups in the course of the European-introduced epidemics. This sentence has witness validation.

CHAPTER 27

358

How in Former Times, on the Fifth Day after Their Death, People Said, "I'm Back!"⁶⁸⁸ We Shall Write about These Things

In very ancient times, they say,⁶⁸⁹ when a person died, people laid the body out until five days had gone by.

The dead person's spirit, which is the size of a fly, would fly away, saying, "Sio!"⁶⁹⁰

When it flew away, people said, "Now he's going away to see Paria Caca, our maker and our sustainer."

359 Some people say, "At that time Paria Caca didn't exist yet, so the souls flew up high to Yauri Llancho."

<margin, in Quechua:> [Before Paria Caca or Caruino appeared, people emerged at Yauri Llancho and at the place called Vichi Cancha.]⁶⁹¹

688. This myth evidently belongs to the body of belief about primordial times, because section 359 says major *huacas* had yet to appear and because the content is prefigured in chapter 1 (sec. 4).

689. Except for the title, this chapter is entirely in reportive validation and contains no evidently editorial insertions.

690. *animanri huc chuspi chicallan sio ñispa pahuac carcan* "The dead person's spirit, which is the size of a fly, would fly away, saying, "Sio!"': the Spanish and Latin term *anima* may be an attempt to render the sense of terms like *upani* (Duviols 1978), referring to a light, dry, volatile being that contains the vital essence of a person. A fly, which is a light, dry, flying form of life that emerges from the dead body, may be a metaphor for, or the actual body of, this Andean 'anima' (see chap. 28, sec. 367).

691. Yauri Llancho is the place from which the conquerors of Concha (chap. 31, secs. 389, 394, 446) are said to have originated. Vichi Cancha is the place from which the conquerors of Checa originated (chap. 24, secs. 303, 315, 319, 324; chap. 31, sec. 389). The selection of Yauri Llancho as the *pacarina* or origin shrine to which the dead return suggests that this chapter has a Concha source.

360 The dead used to come back⁶⁹² after five days.

When they were about to return, people waited for them with prepared food and drinks.

When the dead arrived, they'd just say, "I'm back!" and rejoice immensely in the company of their elders and their brothers.

They'd say, "Now I'll never die again forever!"

361 And so, at that time, people swiftly increased in number. They lived in great suffering, miserably gathering their food, terracing both cliffs and ledges for their fields.

362 When things were like that, a certain man died. After his death his elders, his brothers, and his wife waited for him on the fifth day, when he was due to arrive back.

But the man didn't arrive. It was on the next day, that is, on the sixth day, that he arrived.

So his elders, brothers, and wife were feeling furious as they waited for him.

When he arrived, his wife was enraged, and she gave him a terrible bawling out: "Why are you so damn lazy? Other people never let us down by failing to come. But you, yesterday you made us wait for you, and all for nothing!"

363 In her spite the dead man's wife hurled a maize cob at his arriving spirit.

The moment she threw it, he made a "Sio!" noise and went back where he'd come from.

Since that time, not a single dead person has ever come back.

692. That is, presumably, came back as flies and then recovered their full human bodies. Otherwise the next passage would not make sense.

How People Used to Feed the Spirits of the Dead⁶⁹³ during Paria Caca's Festival and How They Thought about All Saints' Day in Former Times⁶⁹⁴

In another chapter⁶⁹⁵ we have already told how, when people traveled to worship Paria Caca, they used to cry for their dead and feed them.

Remembering those meals for the dead, people who hadn't yet sincerely converted to Christianity are known to have⁶⁹⁶ said, "The Spaniards also give food to their dead,⁶⁹⁷ to their bones, on All Saints' Day,⁶⁹⁸ they do feed them. So let's go to church. Let's feed our own dead."⁶⁹⁹

693. *animacunacta* 'spirits': the same word is used in chapter 27 (sec. 358) to signify the escaping remnant of the deceased. In the body of this chapter, however, the dead who are fed are not called *animas* but *huanoc*, 'die-ers' (that is, existing though not living persons; see Urioste 1981). The Andean dead were felt to have personal existence as long as any part of their bodies, or even clothing or an effigy, was conserved.

694. *ñaupa pacha* 'former times': this instance of the common phrase is important because it tells us that the makers of the manuscript thought of earlier parts of the colonial era within the category *ñaupa pacha*.

695. That is, chapter 9 (secs. 127–128), the explanation of Auquisna and its rites for the dead.

696. 'Are known to have' added to indicate witness validation, which continues through the first sentence of section 366.

697. *ayanta* 'their dead': *aya* seems to mean a person already established as a deceased member of society (formerly through mummification) as opposed to a person in transition to this status (*huanoc*). *Aya*, not *huanoc*, lived in the 'house of the dead' (chap. 11, sec. 155). The term *mallki* 'mummy' does not appear in the manuscript although at least one *huaca* (Nan Sapa, chap. 24, secs. 319, 320, 323) seems to have been a mummy.

698. That is, on November 1. Olivia Harris (1982: 56–57) has suggested that the modern Laymi Aymara ritual for this day, which resembles the one described here, achieves "the socialization of the graveyard" and

365 In former times people took along all sorts of foods cooked to perfection.

And when a person died, remembering how things used to be long ago, people used to wait, saying, "Our dead will return in five days. Let's wait for him."

They used to keep nightly vigil until the dawn of the fifth day after his death.

366 On the fifth day, a <crossed out:> [person] woman would put on her fine clothing⁷⁰⁰ and go to Yaru Tini, saying, "I'll bring him back from there," or "I'll wait for him and then come back."

Then, they say,⁷⁰¹ that woman would go there carrying different foods and maize beer.

367 At Yaru Tini, as the sun was rising, the dead spirit would arrive.

In the old times, two or three big flies—people

the initiation of a wet-season regimen bringing the living and dead close together. It ends at Carnival.

699. Andean tradition required careful conservation of the dead in caves or 'houses of the dead' (chap. 11, sec. 155) where they were regularly visited and fêted. Andean people considered Christian burial, which Spanish clerics forced upon them, an affliction because it precluded feeding and clothing one's departed kin. Ancestors buried in Christian graveyards were imagined as starving and suffering while they decayed. Many natives were punished for rescuing their kin from graves. The ritual described here seems to be an attempt to mitigate anguish about burial.

700. *pachanta* 'her . . . clothing': third person possession marker *-n-* ambiguous in reference; can also be read as clothing of the deceased.

701. 'They say' supplied to indicate reportive validation, which continues through the end of section 369.

call them *llacsa anapalla*⁷⁰²—would light on the garment she brought.

368 She'd sit there for a long while. As soon as those maggots called *huancoy*⁷⁰³ worms left the corpse, the woman would say, "Come on, let's go to the village." And as if to say, "This is him," she'd pick up a small pebble and come back.

When the woman arrived, and when the dead person's home had been hurriedly swept clean, they started feeding him.

After the food, they offered the deceased drinks. Once the deceased had eaten, they also ate.

369 At <crossed out:> [deep] dusk, all his *ayllu* kinspeople danced five times, wailing.

When they'd finished dancing and wailing five times, they threw the pebble the woman had brought out into the street, saying, "You go back now. It's not time for us to die yet."⁷⁰⁴

702. Unidentified. *Llacsa* 'blue-green ritual powder' suggests the brilliant color of a bluebottle fly. *Anapalla* may be related to *ayapaura*, the name of "a big fly that dirties the flesh," mentioned in a trial of "idolators" in Otuco in 1656 (Duviols 1986: 64–65). The mourners waited for this fly to appear on the deceased's clothes because they thought it was the returning soul. This idea is also explicit in chapter 27 (sec. 358).

703. Taylor (1987b: 419–420) shows that the word *huancoy curo* used here may be an error conflating *huancuyro* 'bee' with *curu* 'worm' (specifically glossed by González Holguín as a kind that infests "bodies"; [1608] 1952: 56). Taylor gives 'bee' in his translation with the caveat that it appears really to refer to the above-mentioned flies. But perhaps *huancoy curo* is used in the correct sense of *curu* 'worm', meaning a larva or maggot infesting the dead body, and not the sense 'bee'. The point would then be that the cadaver must be left long enough to breed worms so its *anima* can emerge and escape in the form of flies.

704. In the later "idolatry" trials, which often prosecuted Andean mortuary ritual, rites of this sort are de-

370 On that day we know⁷⁰⁵ they divined with a spider,⁷⁰⁶ asking, "Why did this man go and die on us?"

The diviner⁷⁰⁷ would reply, saying of the *huacas*, "Because this one was angry" or "Because that one was angry"; if he mentioned Paria Caca or any such *huaca*, people fulfilled the command by sacrificing a guinea pig or any other thing they had.

This is as much as we know about those who've died.

371 In Huarero Cheri and also in Quinti, people say on All Saints' Day, "Let's leave some nice warm food for the dead alongside the church" and they cook up some potatoes and pieces of jerky⁷⁰⁸ well seasoned with red pepper, and put it out, just as if it were food for people to eat, and also toasted maize and boiled meat, as well as a small pitcher of maize beer for each of the dead.

They lay out all the things we've mentioned, because they think, "It's likely that the dead do eat." Maybe this is what they have in mind when they offer them plentiful hot dishes of all sorts.

scribed as taking place one year after the death. At that time the lingering 'person' here symbolized by the stone was dispatched from his household. The final farewell to the dead, called *kacharpariy* or 'sendoff', has survived into modern Quechua culture.

705. 'We know' supplied to indicate witness validation, which continues to the end of the chapter.

706. The spider is here called by the Spanish-derived word *arañu* (also in supp. I, sec. 450). Spider divining is described by Polo de Ondegardo ([1554] 1916: 32) and in various "idolatry" documents. Spiders were subjected to torture and then inspected to see which feet were injured or missing. A 1613 Jesuit report says killing the appropriate type of spiders other than sacrificially was prohibited by *huaca* priests (Hernández Príncipe [1613] 1919: 188, 194).

707. 'The diviner' supplied.

708. *charquincunactari* 'pieces of jerky': the English term is derived from the Quechua name (*charqui*) of this Andean invention.

CHAPTER 29

372

How Something Called the Yacana Comes Down from the Sky to Drink Water. We Shall Also Speak about the Other Stars and Their Names

They say⁷⁰⁹ the Yacana, which is the animator⁷¹⁰ of llamas, moves through the middle of the sky. We native people⁷¹¹ can see it standing out as a black spot.⁷¹²

709. 'They say' supplied to indicate that this chapter begins with reportive validation.

710. *camaquin* 'animator': Juan Polo de Ondegardo ([1554] 1916: 3–5) said, "in general [the Incas] believed that all the animals and birds on the earth had their likeness in the sky, in whose responsibility was their procreation and augmentation" and went on to describe a celestial herd prototype much like this one. Bernabé Cobo's *Historia* ([1653] 1964: 2:159) has more details on this astrologylike complex.

Polo seems to be referring to the concept *camay*, of which this sentence is a *locus classicus*. Taylor (1974–1976: 234) suggests imagining *camac* as an entity that (1) is above and outside terrestrial reality; (2) is a prototype of earthly instantiations; and (3) functions to vitalize earthly instantiations by charging them with their specific essence and energy. *Camaquin* employs an agentive suffix and is probably a near synonym to *camac*.

A similar example is *chuchucollor*, two stars considered as creators of twins (Huertas Vallejos 1981: 88).

711. *ñocanchic runacunapas* 'We native people': some Andean constellations are reckoned negatively (consisting of dark spots within the Milky Way) and thus are not easy for non-natives to see. Garcilaso ([1609] 1966: 1:119, Livermore's translation) mentions the Yacana as one that native people tried unsuccessfully to make him see. But *ñocanchic* is inclusive first person plural, indicating that the person speaking included his audience among those who see constellations this way, namely, *runa*. This suggests that the testimony was gathered in a dialogue among *runa* people and not with any Spanish person.

712. The *yacana* is one of the 'dark cloud constellations' discussed by Gary Urton (1981: 169–170, 185–188).

The Yacana moves inside the Milky Way.⁷¹³ It's big, really big. It becomes blacker as it approaches through the sky, with two eyes and a very large neck.

This, we know,⁷¹⁴ is what native people call the Yacana.

373 They say⁷¹⁵ if a man was in luck and fortunate, the Yacana would fall right on top of him while it drank water from some spring.

As its woolly bulk pressed down upon him, someone else would pluck out some of its wool.

374 That apparition would occur at night.

In the morning, at daybreak, the man would look at the wool he'd plucked out. Examining it he'd see the wool to be blue, white, black, and brown, of every hue, thickly matted together.

If he had no llamas, he'd worship at the place where he had seen the apparition and plucked the wool, and trade for some llamas right away. After worshipping he'd trade for a female and a male llama.

Just from the two he'd bought, two or three thousand llamas would soon come.

In old times the Yacana⁷¹⁶ revealed itself this way to a whole lot of people all over this province.

713. *mayo* 'Milky Way', literally, 'river': the Milky Way was interpreted as a cosmic river through which water, having run down to the sea, circulates back up into the atmosphere. Urton (1981: 54–69) discusses related modern ideas.

714. 'We know' supplied to indicate witness validation in this sentence only.

715. 'They say' supplied to indicate resumption of reportive validation, which continues through the end of section 375.

716. 'The Yacana' supplied.

375 In the middle of the night, when nobody is aware of it, the Yacana drinks all the water out of the ocean.⁷¹⁷ If the Yacana failed to drink it, the waters would quickly drown the whole world.⁷¹⁸

376 A small dark spot goes before the Yacana, and, as we know, people call it the Tinamou.⁷¹⁹

This Yacana, they say, has a calf. It looks just as if the calf were suckling.⁷²⁰

Also, we know⁷²¹ there are three stars in a straight line.⁷²²

They call these the Condor, the Vulture,⁷²³ and the Falcon.

377 Next are the ones we call the Pleiades;⁷²⁴ if they

717. That is, the Yacana, descending from the center of the sky, sucks up water from the waters surrounding earth. (This may refer to the period during the dry season when the llama and other dark cloud constellations remain below the horizon.) The cosmological metaphor links the way llamas descend from the high slopes to drink at lower-lying waterholes with the way the atmosphere “drinks” water from the ocean.

718. That is, if the Yacana failed to suck water up from the ocean into the atmosphere, the ocean would rise and drown humanity. Compare with chapter 3 (secs. 29–34), where a llama warned a man that the world was about to flood; perhaps the llama knew that Yacana, the master llama, was going to omit drinking.

719. The bird commonly and misleadingly called “partridge” in the Andes; see chapter 6 (sec. 87); see also Urton (1981: 171, 181–185). ‘As we know’ supplied to indicate witness validation of this sentence only.

720. Taylor (1987b: 429) has: “When it suckles, the Yacana wakes up.” This reading rests on the double sense of *rihcan* ‘appears’/‘awakens’. ‘They say’ added to indicate reportive validation.

721. ‘We know’ supplied to indicate witness validation, which continues through the second sentence of section 378.

722. Perhaps Orion’s belt.

723. *suyuntuytapas* ‘Vulture’: black vulture, *Coryphastur atratus*, or turkey vulture, *Cathartes aura jota* (Koepecke 1970: 38).

724. Here the Pleiades are called by their Spanish name, *cabrillas*. A common Andean name for the Pleiades is *onqoy*. The Pleiades cult was the astronomical part of the Corpus-tide (summer solstice and preharvest or harvest-time) peak of the ceremonial year. “Confessions are made during the solemn festivals, of which there are three each year. The most important of these is close to

come out <crossed out:> [very] at their biggest people say, “This year we’ll have plenty.” But if they come out at their smallest people say, “We’re in for a very hard time.”⁷²⁵

They call another constellation, which stands out as a perfect ring,⁷²⁶ the *Pihca Conqui*.⁷²⁷

378 Certain other stars always appear very large.

People give them the names Poco Huarac, Villca Huarac, and Cancho Huarac.

In the old times, people, or at least some few of them, reportedly⁷²⁸ used to worship them, saying, “These are the animators, the makers.” The rest still worshiped these stars as they were rising,⁷²⁹ spending the appropriate nights in sleepless vigil, but said, “We’ll hold the other *huacas* in higher honor.”⁷³⁰

This is all we know.⁷³¹

Corpus Christi. It is called Oncoy Mitta, which is when the constellation called Oncoy appears. They do homage to this constellation to keep their corn from drying up” (Arriaga [1621] 1968: 49; Keating’s translation).

725. Urton (1981: 118–120) discusses their salience in agricultural forecasting; today they are often called *collica* ‘the storehouse’.

726. *muyo muyolla hamucta* ‘stands out as a perfect ring’: could mean either that they move in a circular path or that they are arranged in a ring.

727. Urton (1981: 100–101) identifies a constellation *pisqa coyllur* ‘the five stars’, probably the Hyades, which might be the same as *pihca conqui*. Alternatively, *pihca conqui* might be the curved tail of Scorpio, which Urton identifies as one of the two *collicas* or constellations of crop augury.

728. ‘Reportedly’ supplied to indicate reportive validation.

729. *sicamuptin* ‘rising’: probably heliacal rise, not nightly rise. Heliacal rise is the first day on which the star is visible in the east before dawn.

730. The meaning of the sentence varies slightly depending whether one takes *yallichisac* to mean ‘set in higher position’ or ‘advance one’s fortunes’. Taylor (1987b: 431) has: “The other people used to say, concerning these *huacas*, that according to tradition the fact of worshiping them would make them prosper. And so they worshipped these stars staying awake without sleeping during the night they appeared.” Either reading squares with Cobo’s understanding of star cults as devotions through which a person might win the *camay* force proper to his or her status or identity ([1653] 1964: 2:160).

731. This sentence has witness validation.

CHAPTER 30

379

How Two *Huacas*, a Male and a Female, Dwell in the Lake of the Allauca in Purui. We Shall Write about Their Lives

In very ancient times, so they tell,⁷³² there was a man called Anchi Cara.

This Anchi Cara came to dwell⁷³³ by the water at a spring named Purui, to ensure that water would come to the fields of the Allauca.

While he was there, a woman from the Surco⁷³⁴ area, a Picoy⁷³⁵ woman, came over to him.

The woman's name was Huayllama.⁷³⁶

380 "Brother," this Huayllama said as soon as she arrived at Purui Spring, "very little water comes to my field. Are you the only one who draws water here? What are the rest of us supposed to live on?" And she sat down right inside the spring.

381 Since she was a fine and beautiful woman Anchi Cara fell suddenly in love⁷³⁷ with her, and he greeted her with gentle words.

Then the woman refused to let the water flow in this direction.

When she did that he addressed her in polite language, saying, "Sister, please don't do this. What'll my children live on?"

382 At this point, Anchi Cara's children came over and sloshed⁷³⁸ the water out toward Lliuya lake.

(Just below that spring there are two small ponds, which we already mentioned, called Lliuya and Tuta lakes.)⁷³⁹

Three or four small elongated rocks stand inside Lliuya lake.

These are said to be Anchi Cara's children.

383 If his kids hadn't come and sloshed that water out all the time, very little indeed would flow down here.

(Even so, we know, only a small amount flows down.)⁷⁴⁰

384 Once they'd finished arguing about the water, the two of them, Anchi Cara and his woman Huayllama, sinned together.⁷⁴¹

"I'll stay here forever!" each one said after they'd sinned together, and they froze into stone.

These stones are there until today. His children likewise dwell in Lliuya lake.

This is all we know about them.⁷⁴²

732. 'So they tell' supplied to indicate that this chapter begins in *-si* reportive validation, which continues through the first sentence of section 382.

733. *tiamun* 'came to dwell': not in the unambiguously past *-rca-* tense, as the subsequent sentences are.

734. San Gerónimo de Surco (see chap. 3, sec. 31), in warm valley lands of the lower Rímac. The story seemingly allegorizes a rivalry over a high lake coveted by the Allauca of Checa and by Surco.

735. Picoy is mentioned by Dávila Brizeño ([1586] 1965: 163), as San Jerónimo de Picoi, a forced resettlement village close to Surco.

736. This sentence has witness validation.

737. *enamoraspá* 'fell in love': using a Spanish-derived expression.

738. *vischomorcan* 'sloshed . . . out': more literally, 'threw', this word might be a technical term meaning 'diverted'. But, given the sometimes comic tone of sex/irrigation myths, the image here might rather be that of children playfully sloshing the water out of the spring.

739. This sentence has witness validation. These lakes have not been mentioned previously in the manuscript; presumably the phrase refers to material edited out.

740. This sentence has witness validation ('we know' supplied). A crossed-out Spanish phrase meaning 'even so' is replaced with the equivalent Quechua.

741. *huchallicorcancu* 'sinned together': using a shame-oriented colonial term.

742. This sentence has witness validation.

385 Later on, at the time when they were settling into this area, the *huacsas* of the Allauca *ayllu* used to go to Purui in order to clean the canal at the end of the rainy season.

As they arrived, the *huacsas*, however many there were, would walk around Lliuya lake⁷⁴³ blowing on their panpipes.

386 After walking around the lake, the *huacsas* would go to greet Anchi Cara, who stood over the water.

743. Compare with the Concha *huacsas*' circuit at Yansa lake (chap. 31, secs. 437, 440). Honorific ritual visits to water sources are still common elements of rural Andean religion today.

With just a few words, they'd throw in a little of their coca, and then return to the lakeshore.

On the lakeshore they worshiped Anchi Cara first, then his children, and finally Lliuya and Tuta lakes themselves.

387 In the old days they performed worship with a llama, but now that they don't have llamas anymore, they worship with just a guinea pig, some *ticti*, or whatever else they have.

After finishing this worship, all the people began to dredge out the canal.

This is as far as the story goes.⁷⁴⁴ The account of their existence ends here.

744. This sentence has witness validation.

CHAPTER 31

388

As in the Previous Chapter We Spoke about the Existence of a Certain Lake, Likewise We Shall Now Tell about the Lake of the Concha Ayllu, the One Called Yansa. The Story Is Like This

<margin:> [Concha]

We've already explained in other chapters how things were in early times, how these villages were full of Yunca people, and other such things.⁷⁴⁵

So, too, they say, the Yunca resided in Concha village.⁷⁴⁶

389 About the people living there, as we indicated in other chapters, some say they're from Yauri Llan-cha or from Vichi Cancha, while others say they came from the *quinua* plant. Likewise the Concha people were born from out of the earth's interior, at Yauri Llan-cha, as five persons.⁷⁴⁷

390 Their names we know,⁷⁴⁸ starting from the first one, they were

Llacsá Misa and his sister Cuno Cuyo who came along with him.

Then there was Pauquir Buxi.

Then Llama Tanya.

These three men together were the first ones to conquer this village.

<margin:>

[Llacsá Misa
Pauquir Buxi
Llama Tanya
Hualla
Calla]

There were also two other men who were their brothers, one called Hualla, and the other Calla.

745. This sentence has witness validation.

746. Concha village probably corresponds to Concha Sica, today an outlying hamlet of San Damián de Checa (IGM 1970–1971). It was first Christianized as San Cristóbal de Concha and then, like Llacsá Tambo, “reduced” into nearby San Damián (Biblioteca Nacional, Lima, ms. B-1483, f. 63r). This chapter forms a rough counterpart in scale, argument, and level of detail to chapter 24, which focuses on the other component of San Damián, namely, Llacsá Tambo and the Checa. Both may be examples or reworkings of a common genre, a long “charter” running from origins through mythic genealogy to entitlements and rites that express them. This sentence has reportive validation, which continues to the end of section 389.

747. The remainder of the chapter is concerned with myths and laws relevant to the five local lineages named here. Material about a privileged lineage, the Llacsá Misa lineage specialized in water priesthood, makes up the bulk of it, but sections 443–446 return to the other four.

748. ‘We know’ supplied to indicate witness validation throughout section 390.

391 They say that⁷⁴⁹ as their other brothers went on ahead, these two fell somewhat behind.

So, lagging behind, they missed the trail and headed instead toward the Yauyo country,⁷⁵⁰ thinking, “Maybe our brothers went over there.”

A long time afterward, only after the other three brothers had finished dividing up the fields and other goods among themselves, they did come back.

392 (The descendants of Hualla are the Lázaro Puypu Rocçi lineage.)⁷⁵¹

749. ‘They say that’ supplied to indicate return to reportive validation.

750. Yauyos Province adjoins Huarochirí to the south and is another mountainous region.

751. ‘Lineage’ supplied. The grounds are that section 444 uses Lázaro Puypu Rocçi’s name as the name of a corporate group and not an individual and that in section 445 three groups belonging to the same set that contains

When Llacsa Misa, the oldest child, was about to die, he addressed Casa Chauca, Lázaro's grandfather, who was also Llacsa Misa's nephew, and said to him regarding the lake called Yansa:⁷⁵² "This will enter into my legacy."⁷⁵³ As for me, I'm already near death." And he left it to him.

From then on Yansa lake was his domain.
Here we leave Hualla.⁷⁵⁴

393 Now we will tell about those three men's approach and arrival.

As we explained earlier, people say⁷⁵⁵ the natives were Yunca.

At that time, people there lived quite happily, drawing water from Yansa lake, for there was plenty of water and even an excess such that their water⁷⁵⁶ reached all the way to the base of Llantapa⁷⁵⁷ mountain.

394 While people lived in this manner, the three men we mentioned before—the oldest being named Llacsa Misa—were born from the earth in the locality called Yauri Llanca.

When they were born, they were born with a stone helmet.⁷⁵⁸

the Llacsa Misa, and of which the Hualla are another subset, are called *yumay* 'patrilineages'. In this sentence witness validation was crossed out and replaced with reportive.

752. Modern Yanascocha is probably the same as Yansa; it is a small spring-fed lake on the high *puna* 5 km east of San Damián (IGM 1970–1971) and feeds the irrigation system of modern Conchasica.

753. *cay coscajman yaiconca* 'This will enter into my legacy': Taylor's transcription (1987b: 442–443) reads *cascayman*, which means 'into what I was' rather than 'into what I gave'. Accordingly he translates: "This [i.e., Cassa Chauca] is who will inherit my role."

754. This sentence and the next have witness validation.

755. 'People say' supplied to indicate reportive validation, which continues through the second sentence of section 394.

756. I.e., their irrigation canal.

757. Where the great mythic bridge Pullao once stood (chap. 5, sec. 73) and where Maca Calla's people, expelled by those of Tutay Quiri, resettled (chap. 26, sec. 355).

758. *chucuyoc*: 'with a . . . helmet': González Holguín ([1608] 1952: 118) has "*chucu* bonnet or ancient-style hat." But the same page clearly indicates that *chucu*, if made of hard material (leather, metal), means a helmet and not a hat. The passage can also be read to mean that a stone with a helmet was born along with, but separately from, the men.

(The helmet was called the *llacsa yacolla*.)⁷⁵⁹

These three people came here carrying the *llacsa yacolla*.

395 They arrived in the area above Yansa lake at a place called Yana Pucyo.

There they sat down and drank.

The Yunca people heard somebody say, "Three fearsome-looking men are sitting over there!" and some went to see them.

396 When they were looking him over like that, Llacsa Misa showed those people his helmet, the one called the *llacsa yacolla*.

The moment they saw it, they all died instantly.

When the remaining Yunca saw that anyone who approached died, they panicked. "Come on!" they said. "Let's get out of here! If those three men find us they'll destroy us all!" And they abandoned their village and their fields just like that, and fled.⁷⁶⁰

397 At the time of their flight, there was a Yunca man there—we don't know his name—and while this man was escaping by night, he left one of his children behind at Concha Sica, the one named Yasali.

398 Yasali's father fled, carrying only an orphan boy whom he'd raised.

When he got across to Capari Caya,⁷⁶¹ almost to Yana Siri⁷⁶² up on the heights, dawn was breaking and the man recognized the boy.

There he was: just his adopted orphan son.

The man wept bitterly, but, knowing there was no way back, he finally left just as he was.

399 Meanwhile, the abandoned boy Yasali was scared to death, being just a child, and he hid inside the place where a cross now stands in Concha Sica.

759. This sentence has witness validation.

760. These Yunca-expelling heroes from Yauri Llanca play a role in Concha myth parallel to the role of the Yunca-expelling heroes from Vichi Cancha in Checa myth (chap. 24, secs. 315–326).

761. Probably not the same Unca Tupi also called Capari Caya in chapter 12 (secs. 167–168), because that reference is to a locale near the Pacific shore while modern Yanaciri is on the high puna across the Lurin valley from Conchasica.

762. Modern Yanaciri (IGM 1970–1971) is 4 km west-northwest of San Damián, a high plateau on the far side of a deep river ravine, from which one can look back toward San Damián and Conchasica.

At the same time those three men arrived at the village.

As they arrived they shared out the houses and all the rest among themselves, and it was then that Llacsá Misa found the boy.

400 “Son, don’t worry,” Llacsá Misa told him. “You’ll stay with me. If my other brothers say to me, ‘Let’s kill him,’ I’ll defend you. But in return, you’ll herd my llamas.”

When the other brothers saw the child, they bitterly scorned him, and they did say, “This kid should die, because sooner or later he’ll tell us, ‘These fields are mine; this land belongs to me!’”

401 “No, why should we kill him?” Llacsá Misa replied. “Better to let him live. He’ll show us all their customs, their fields, and everything.”⁷⁶³

402 But the others still refused, saying, “Let him die anyway.”

Llacsá Misa got angry and said, “My brothers, I’ve told you plenty of times. Watch out or your bones might wind up in the lake.⁷⁶⁴ I say, let him live!”

Only then did the others finally fall silent.

403 So Llacsá Misa let the boy live, and made him herd his llamas.

<margin:> [Cuno Cuyo]

While Yasali was tending the llamas, he married Llacsá Misa’s sister Cuno Cuyo, who’d come with him from Yauri Llanca.

Later, when he’d become a mature man, he even became the *yanca* for Uma Pacha, who had come from Yauri Llanca.

(This boy named Yasali was Cristóbal Chauca Huaman’s grandfather.)⁷⁶⁵

404 And where the Uma Pacha festival we mentioned⁷⁶⁶ is concerned, just as the Checa put on

huayo masks made of trophy heads and danced for a period of five days, so the Concha,⁷⁶⁷ too, danced the same way. They, too, threw spears at the *chuta* target effigies erected for the sake of sons and daughters, and then did the same for llamas.⁷⁶⁸

405 There were likewise *huacsas* in Concha Sica. They drank to both Paria Caca and Chaupi Ñamca in their respective seasons, and on one certain day they drank together with the Checas as peers.⁷⁶⁹

This is as much as we know about their customs.⁷⁷⁰

406 Now we’ll tell about Yansa lake.

When Llacsá Misa arrived at Concha in the company of his other brothers, it’s said that⁷⁷¹ they acquired all sorts of subsistence resources, and from among them Llacsá Misa got Yansa lake.

Pauquir Buxi received Huaycho Coto.

Llama Tanya received the house called Uyu Sana.

407 After they received all these properties, we know,⁷⁷² each one of them began to provide for his own living.

So Llacsá Misa for his part started to propitiate⁷⁷³ Yansa lake.

In Yansa lake, they say,⁷⁷⁴ there was a *huaca* named Collquiri.

<margin:> [Collquiri]

Since Llacsá Misa propitiated these *huacas* for many years, all the Concha worked hard growing maize for him to eat.

767. ‘The Concha’ supplied.

768. That is, they performed the same rites already described in detail in chapter 24 (secs. 321–339). Conchásica and Checa today still regard their respective rituals as in some senses mirroring and rivaling each other.

769. *pactalla* ‘as peers’: normally the Checa despised the Concha as juniors in descent from Paria Caca (sec. 441). But in this one context the solidarity of common birth (*yuric*; see chap. 9, sec. 116) was made to override. The exact occasion is unspecified.

770. This and the next sentence have witness validation.

771. ‘It’s said that’ supplied to indicate reportive validation, which continues through the next-to-last sentence of section 406.

772. ‘We know’ supplied to indicate witness validation.

773. *siruiita callarircan* ‘[he] started to propitiate’: the Spanish-derived root *sirui-* means ‘to serve’.

774. ‘They say’ supplied to indicate reportive validation, which continues through the first sentence of section 432.

763. As in chapter 24 (sec. 316), the invaders intentionally take on the organizational scheme and attributes of the vanquished Yunca natives, but (as in sec. 306) feel anxious about their resulting position of indebtedness.

764. *cochañicman* ‘in the lake’: or ‘ocean’?

765. ‘Grandfather’: the kinship term used is a Spanish one, *aguelo* (i.e., *abuelo*). If taken literally, it puts a surprisingly short generational distance between the hero and his descendant who lived to be baptized. But the speaker may have used *aguelo* to mean one’s direct patrilineal ancestor at any generational remove.

766. See chapter 24 (secs. 324ff).

408 At that time the *huaca* Collquiri wanted a woman⁷⁷⁵ really badly.

He wanted one so much he searched all over the place, even as far as the Yauyo country and Chaclla. As hard as he searched, he just couldn't find one.

409 One day, Cuni Raya said to him, "Hey, she's right here, right nearby, your woman!"⁷⁷⁶

So he set out, full of joy.

From the mountain that overlooks Yampilla,⁷⁷⁷ he gazed out toward Yampilla itself.

As he gazed, he saw a woman dancing very majestically.

That woman's name was Capyama.

410 As soon as he saw how lovely she was, he immediately felt in his heart, "This is the one who'll be my wife."

He sent one of his serving boys, saying, "Go son, go tell that lady, 'Your llama has given birth to a <crossed out:> [female] male calf.' That's all. She'll come right away."

411 As soon as he sent him, the youth went off.

When he arrived, he told the woman, "Ma'am, one of your llamas has given birth just up there on the mountain." She was thoroughly delighted, and rushed straight to her house.

There she hung her golden drum at her midriff,⁷⁷⁸ hid two small coca bags in her bosom,⁷⁷⁹ took a long-necked jar of her maize beer, and came in a big hurry.

775. All the irrigation myths (chap. 6, secs. 81–90; chaps. 7, 30, 31) link maize-bearing land to female *huacas* and water to male ones, with a sexual episode representing the origin of irrigation and consequent fertility. Dumézil and Duviols explore this motif in "Sumaq T'ika" (1974–1976).

776. Although Cuni Raya is less salient here than in chapters 2 or 14, the Collquiri myth bears resemblances to these major Cuni Raya myths. As in the story of the bride in the box (chap. 14, secs. 192–197), where Cuni inveigles the Inca by offering a woman, Cuni here brings about a male's downfall by manipulating his sexual desire. In the story of Caui Llaca (chap. 2, secs. 9–26), Cuni Raya caused a woman to give birth by tricking her into taking hidden sperm into her body, and here his dupe Collquiri does something similar (secs. 414–415).

777. Modern Llambía, a hamlet 3 km north of Huarochiri (IGM 1970–1971).

778. *chaopipi* 'at her midriff': Taylor (1987b: 459) has "center of [the house]."

779. *hucclayninman* 'in her bosom': Ricardo [1586] 1951: 65.

(The Concha call this jar *lataca*.)

412 When he saw her coming the *huaca* Collquiri was overjoyed and sped right back to Yansa.

Meanwhile, his servant boy led the woman along, and as he guided her, he lied to her, saying, "We're almost there now. It's right around here."

413 Then Collquiri turned himself into a *calcallo*⁷⁸⁰ and waited for her on the mountain overlooking <crossed out:> [Yansa] Yampilla.

"I think I'll catch that *calcallo*," the woman said as she arrived there.

Each time she thought she'd grab it, the *calcallo* darted hither and yon and wouldn't let itself be caught.

414 Finally she did catch it. The moment she grabbed it, she stuck it inside her dress.

As she was grabbing it, she spilled her maize beer from the *ratataca*⁷⁸¹ jar.

Even as she spilled it, the spot where she spilled it immediately turned into a spring.

This spring is called Ratac Tupi⁷⁸² until today.

415 The *calcallo* she had put inside her dress grew large inside her belly and made it ache terribly.

"What could this be?" she said when it hurt her. She looked, and there, on the ground where he'd fallen,⁷⁸³ appeared a man, a fine handsome youth.

He immediately greeted her in his sweetest way, saying, "Sister, I'm the one you stuck in your dress. What can we do about it now? It was I who sent for you."

416 The woman for her part immediately fell in love⁷⁸⁴ with him.

Since she felt that way, they slept together.

After they slept together, he took her to his home, Yansa lake.

Meanwhile, her father, her mother, her brothers, and all her relatives went searching for her all in tears. "But where did she go?" they said.

780. Unidentified; possibly a grasshopper.

781. *ratataca* thus in original, discrepant from *lataca* in section 411; *r/l* is a common Quechua variation.

782. Perhaps a wordplay on *lataca*, the name of her beer jar in local language.

783. *hurmascampica*: the third person marker *-m*- could also mean 'where she'd fallen'.

784. *enamorarcan* 'fell in love': a Spanish-derived word.

417 When they'd been searching for a long, long time, a man from Yampilla called Llucaua told them, "Your daughter has turned into a high priestess.⁷⁸⁵ She has a husband with all kinds and amounts of possessions." And so they came at once.

"Why did you come to steal our daughter, our sister from us?" they said to Collquiri when they found her. "Are you the one who forced us to search for her through all these villages until we were exhausted?" In high dudgeon they said, "Now we'll make her go back home!"

418 "Fathers, brothers, you have every reason to rebuke me, because I did fail to tell you ahead of time," Collquiri replied. And he inveigled them by saying, "What may I give you as restitution? A house, a field, llamas, people, agave fiber goods,⁷⁸⁶ gold or silver? What about it, what do you want?"

419 Despite his enticements they agreed to nothing. "I'll take their sister back," Capyama's father⁷⁸⁷ said, repudiating the offer.

"All the same," Capyama⁷⁸⁸ replied when he said this, "I wouldn't go back. It was with all my heart that I took him for my husband!"

420 "Father, please, I hope you won't take my wife away from me," said the man called Collquiri. "I've already told you that I'll give you anything, whatever you like, as much as you want. Or maybe I should give you the Goesunder?"⁷⁸⁹

A man who'd come in and sat down last in the gathering of that woman's brothers spoke up when Collquiri said this: "Father, say yes."

And the brothers⁷⁹⁰ deliberated in low voices: "What could it be, that Goesunder?"

421 Their old man came and said, "It's a deal, son.

785. *ancham villcayam* 'has turned into a high priestess': more literally, 'has greatly become *villca*'. This passage suggests that the senses of *villca* can include a person wedded to a *huaca*.

786. *chauractacho* 'agave fiber goods': as in chapter 24 (sec. 334) and problematic for the same reasons.

787. 'Capyama's father' supplied.

788. 'Capyama' supplied.

789. The literal sense of *huco ric* 'the Goesunder' is clear enough; it means 'what goes under or inside'. But its sense in context is enigmatic, and Capyama's kinsmen let their curiosity about the *huco ric* get the better of them in the unmistakably comic episode that follows.

790. 'The brothers' supplied.

Marry my daughter. And make good on what you promised." So he said, and they returned home.

"We'll see each other in five days, father, in your village!" said Collquiri.

422 Five days later Collquiri, as good as his word, did go under. Underground he headed⁷⁹¹ toward Yampilla.

After he'd traveled a long stretch, he thought to himself, "I wonder how far I've come?" for he wanted to come out on the opposite side of the Apar Huayqui river.

Right where he got his head out, water squirted upward like a fountain.

423 He plugged the hole with some copper and went back underground.

He went on traveling underground until finally he emerged up above the high side of Yampilla.

The spring where he surfaced bears that woman's name, Capyama,⁷⁹² until today.

424 An enormous amount of water surged from Capyama spring and threatened to wash away all the fields of the Yampilla.

It actually did carry away all their *oca*⁷⁹³ that was drying and all their *quinua* that was spread out in the sunshine, and lots of other things.

The Yampilla people got good and mad. "Why did you ever go and say yes to Collquiri?"

"Send him back immediately!"

"We were already used to getting along with just a little water!" they all said.

425 As they were complaining, Capyama's elders shouted at Collquiri from their <crossed out:> [spring] village:

791. *hucota cama rircan* '[he] did go under': at this moment we understand the answer to the *huco ric* puzzle. Collquiri himself was the *huco ric*—the thing that goes under or inside—in the double sense of going under or inside Capyama's dress and of burrowing through the earth.

792. Modern Llambía draws its irrigation water still from Capyama spring. The love of Capyama and Collquiri (now renamed Pedro Batán, and imagined as a romantic lover rather than a clownish suitor) is prominent in modern folklore.

793. *oca*: *Oxalis tuberosa*, a potatolike plant with slender edible roots, widely cultivated through the Andes "on terraces in the *quebradas* of the cold sierras and in the altiplano zone to an altitude of 3,800 to 4,000 meters." Because they contain calcium oxalate crystals, *oca* tubers must be cured in the sun before cooking (Towle 1961: 56–57).

"Son-in-law, everybody's mad at us! Don't send us so much water!"

"Shut it off!"

"Hey, Collquiri! Hold back on the water!" they yelled.

426 With them shouting like that, Collquiri plugged the hole with a blanket⁷⁹⁴ and other stuff.

But the more he plugged it the more the barrier crumbled and the more the water kept bursting through over and over again.

Meanwhile, the people from down below kept yelling at him nonstop:

"PLUG IT UP!!!"

Finally Collquiri jumped in himself, put in his cloak, and sat down in the middle of the water.

427 When he sat down there, the water at last dried up somewhat.

Nowadays, water flows out of that spring passing through Collquiri's cloak as if through a sieve.

Whenever he plugged this waterhole, water flowed from many other springs here and there all over the district. Before, there weren't any.

428 Since their water supply was dried up as a result of all this, the inhabitants of Concha village started to get mad, too:⁷⁹⁵ "Why has he given our water away?"

"What about us, what are we supposed to live on?" they said.

All the Concha together spoke to Llacsa Misa, who was in charge of the water: "Listen, Llacsa Misa, why did you go and let that water dry up?"

"What are people supposed to live on?" they said, and threw him into the lake.

429 When the *huaca* Collquiri saw what had happened he thought, "They're right. How are they going to live?" So at once he gave orders to one of his servants, a youngster called Rapacha:

"Dump some dirt and rocks from the shores down into the lake. There we'll measure out what's for the sustenance of the Concha people."⁷⁹⁶

794. *titahuanpas* 'with a blanket': in supplement II (sec. 478), *huc fresadacta o titactapas* 'a blanket or cover' clarifies this otherwise unattested word. But *tita* might be an error for *titi* 'lead', as other translators suppose.

795. They got mad, that is, because their *huaca* Collquiri had diverted their water to Capyama Spring and Yampilla village just to satisfy his yen for Capyama.

796. Apparently this means Collquiri had the boy Rapacha dump earth and rocks in the lake so as to reduce its capacity and breach its banks, thereby making water spill out; he then apportioned this water to the Concha.

430 So that boy Rapacha breached the lake's bank a little. As soon as it was opened, Collquiri instantly dammed the water up from below by building a great wall there.⁷⁹⁷

This wall, built without mortar, stands as the lake's mouth⁷⁹⁸ until today.

431 Collquiri had the man called Llacsa Misa mark this wall carefully in five different places.⁷⁹⁹ He said, "When the waters reach this point, you must close the mouth of the lake. After that, at the correct times you will direct the waters to the lower fields. At sunrise, you will release the water. They will water the *añay*⁸⁰⁰ maize five times only. It is for this that I ordain you." Carefully he familiarized Llacsa Misa⁸⁰¹ with the marking stones.

432 From the time he made this known up to today, all of Llacsa Misa's descendants followed each other in the exact same custom and continue it even now.

People in fact⁸⁰² refer to these markers as "lake measures" and call the stick Turca Caya.

It⁸⁰³ is said to be⁸⁰⁴ accurately aligned over the stoneworks to serve its function; if we went there we might see it⁸⁰⁵ by taking a careful look.⁸⁰⁶

797. That is, once Rapacha had forced water to breach the lake's bank, Collquiri built a dam in the resulting channel and thereby turned the lake into a controllable reservoir.

798. *cochap simin* 'lake's mouth': a literal translation; the phrase apparently (from context) means the lake's outlet. The stone dam still existed much as described in section 431 as of 1990.

799. That is, the dam was to have five separate sluice gates (now seven). They were to be opened in sequence, from shallowest to deepest, as the lake level fell. When asked why a single sluice gate at the lowest level would not suffice, modern San Damián residents say high water pressure when the lake is full is the reason: using the ancient stone-and-sod technology (with which they are still familiar), a single gate at the lowest level would, at the beginning of the irrigation period, release water with too much force for human musclepower to control.

800. Untranslated. *Añi* is the modern local name of a multicolored maize that needs relatively little irrigation.

801. 'Llacsa Misa' supplied.

802. 'In fact' supplied to indicate witness validation of this sentence.

803. 'It': perhaps the measuring stick *turca caya*. A tentative translation.

804. 'Said to be' supplied to indicate reportive validation. The clauses following the semicolon have *-cha* conjectural validation.

805. 'It': the object of *ricohhuan* 'we might see' is unstated in original.

806. *chayasparaccha alli ñauinchichuan ricohhuan*

433 During the month of March the Concha go out to close the lake's mouth,⁸⁰⁷ all of them, both men and women.

As for the water measurement mentioned above, Llacsá Misa would decide, "It'll be at so and so a time" or determined some other thing. All the Concha went along, following his exact words.

434 Because he was the *yanca* for this purpose, all the arrangements of the season were made in compliance with his commands.⁸⁰⁸

When it came to irrigation he'd be the only one to give orders about it, saying, "It'll take place now" or "It'll be so many days." And all the Concha obeyed him to the last word.

435 If the lake ever spilled out in the middle of the night, people dragged Llacsá Misa's descendants to the scene from wherever they happened to be, saying, "Go, it's your responsibility!"⁸⁰⁹

Because this was their special care both by day and by night, because they thought only of minding the lake, other people worked hard on their maize fields for them and revered them, saying, "It's because they're numerous that we stay alive."

436 Llacsá Misa, and his descendants, watched over the lake very carefully, saying, "Beware the water doesn't spill out of this lake."

If the lake ever spilled out and the waters of Yansa rushed into the river, a breach would immediately open in the dam. Whenever it did flow into the river, it cracked the dam.

For this reason they watched it with great care.⁸¹⁰

'if we went there we might see it by taking a careful look': an uncertain translation. *Alli ñauinchichuan*, more literally, 'with our good eye', could perhaps mean 'with our practiced eyes', or 'clearly see with our eyes'; *ñauinchichuan* has inclusive first person plural marking, indicating that the speaker regards the addressee as also having the native's 'good eye' for such matters.

807. The modern lake-closing ritual, called the lake's "anniversary," is practiced on February 3.

808. The position of this priest as irrigation authority affords an important clue to the economic component of priestly power. Chapter 24 (sec. 335) comments on another example of priests' economic privilege. While the Llacsá Misa water priests enjoy a subsidy in agricultural form, the priest sacrificers mentioned in chapter 24 are privileged in consuming animals.

809. *suyoiquim* 'your responsibility': more literally, 'your domain'.

810. The water priests' concern was practical, not magical. Testimony in a 1648 lawsuit between the Con-

437 As we said before, the *huacas* went to Yansa lake both to impound and to release the waters.

To impound the water all the people went out, too. As soon as they arrived, the women deposited their coca, each one in her own right, and likewise their maize beer each in her own right.⁸¹¹

438 These offerings were for Yansa lake, but it was in fact⁸¹² the *yanca* who received them all.

They'd also take one llama, they say.⁸¹³ They likewise took guinea pigs, *ticti*, and all the other sacrificial offerings.

Once they finished collecting things, they took a *quipu* account of all the people who were absent and began to worship Yansa lake.

439 They worshiped, saying,

"Father Collquiri, the lake is yours and yours are the waters;
This year, give plentiful water to us."

After they finished worshiping, they drank their maize beer and chewed their coca.

After that the men and women together began to impound the lake.⁸¹⁴

cha and their Suni Cancha neighbors (chap. 9, sec. 135) over control of Yansa's waters tells us that the hydraulic system sometimes did in fact suffer damage from overflows: "Last year in a great flash flood that came from the lake of Yanascocha and its streambed, the canal inlet was swept away leaving it [turned] into a washed-out gully, beyond repair" (Biblioteca Nacional, Lima, B-1483, f. 174r).

811. *sapampitac* 'each in her own right': seemingly, asserting a household-level right of access to water. The female ritual role as receiver of water rights parallels the female role of earth as water-receiving *huacas* in the myths.

812. 'In fact' supplied to indicate witness validation of this sentence.

813. 'They say' supplied to indicate reportive validation, which continues through the end of section 440.

814. In 1990 the *comuneros* of Conchasica conducted "anniversary" rituals for Yanascocha Lake in a fashion closely recalling sections 438–439. The *alcaldes*, holders of rotating magistracies that ritually govern irrigation, officiated in place of the *yancas*. The officiants first collected and announced offerings of coca, tobacco, and liquor at lakeside, then dedicated them to the lake's "owners" while loading them in a small raft or "boat" made of dry sod. The sail of the raft was a modern analogue of the *quipu*, a legalized list of irrigators handwritten on paper. While launching the raft, officiants made speeches similar to those recorded c. 1608 but using the

440 When it was time to release the water, people always went five times accompanied by two or three *huacsas*.

Just before this, a man and a woman would enter a fairly large field and bring maize beer there in a big jug, and guinea pigs, two or three of them, and coca leaf.

Having worshiped with these offerings, they'd release the water.

These are as many stories as we know about Yansa lake.

441 Now, we know⁸¹⁵ that the Concha were the very last of Paria Caca's and Tutay Quiri's offspring to be born, and the least prestigious of them.

For this reason, Paria Caca and Tutay Quiri⁸¹⁶ gave them only a very little of their territories and very few of their fields.

442 The *huacsas* we mentioned dance the Chanco during the festival seasons of Paria Caca and Chaupi Namca just as the Checa dance them.

We already talked about all that in other chapters.

443 Now we'll learn about the children of the three men we mentioned.

They say⁸¹⁷ all the offspring of Llacsá Misa became extinct. When Llacsá Misa was about to die, his nephews, namely, Cuno Cuyo's and Yasali's children, married Hualla's descendants, who'd returned after a long time from the Yauyo region.⁸¹⁸

modern names of the "owners": María Capyama and Pedro Batán. The climactic event was the sailing of the boat and tense observation of its course as lake water gradually saturated it. When it sank, the officiants said the "owners" had expressed their approval by pulling the boat down through the center of the lake.

Yanascocha now has a modern dam with a steel sluice gate, so men and women carry out the closing of Collquiri's dam only in what they call "simulacrum" (a ritualized token of the whole job). The traditional technique of closing the dam is called *champería*, that is, sod-laying. *Champeros* were designated by the officiant to cut fresh sod blocks from a nearby marsh, carry them to the dam, and stack them against the ancient dam so as to prevent lake water from passing through it.

815. *yachanchic* 'we know': introduces a passage with witness validation, continuing through the first sentence of section 443.

816. 'Paria Caca and Tutay Quiri' supplied.

817. 'They say' supplied to indicate resumption of reportive validation, which continues to the end of section 444.

818. In Taylor's reading (1987b: 485) it is Hualla's chil-

These descendants of Hualla are in fact the Lázaro Puypu Rocçi kindred.

444 <margin, in Quechua:>

[Hualla's descendants are of the Lázaro Puypu Rocçi kindred. They entered into the Llacsá Misas' position, so the people called Huallas don't exist any more. Only one woman is still living, and this one is childless; she's Anya Ruri's wife.]⁸¹⁹

445 Pauquir Buxi's descendants are in fact⁸²⁰ still alive today and they're the Nau Paico, those people.

The descendants of Llama Tanya are now the Ruri Cancha, the Casin Chauca, and the Tacya Cancha.

These three patrilineages are the reported⁸²¹ descendants of Llama Tanya.

446 As for the Hualla, we already mentioned the Lázaro Puypu Rocçi.

dren who are called nephews of Llacsá Misa. Since both Cuno Cuyo and Hualla are siblings of Llacsá Misa, the offspring of either could be called his nephews. (The term in question is the Spanish *sobrino*, which, at least in Spanish context, does not distinguish between relationships through male and female siblings.) Therefore, the translation discrepancy does not imply any discrepancy about local principles of genealogical reckoning.

819. Secs. 443–444 are difficult. Assuming that all the named corporate descent groups are *yumay* 'patrilineages' like the three groups so described in section 445, one reading might be as follows:

Llacsá Misa's direct lineage became extinct at an unspecified time. When some collateral descendants through his brother Hualla took over the role to which the direct descendants would have been entitled (see sec. 446), namely, primacy in the water priesthood, they ceased to function in the lineage bearing Hualla's name. This transferred group or sublineage was called the Lázaro Puyo Rocçi. At the time of writing only one member of an untransferred Hualla sublineage remained. Since this was a woman (Anya Ruri's wife) and childless besides, the Hualla patrilineage as such no longer existed.

Descent groups throughout this passage are named after their apical ancestors. The fact that in this case the corporate name includes a baptismal name suggests that the transfer of the Lázaro Puypu Rocçi sublineage to the Llacsá Misa role was recent (an effect of post-invasion epidemics?).

820. 'In fact' supplied to indicate witness validation, which continues with one interruption to the end of the chapter.

821. 'Reported' supplied to indicate reportive validation of this sentence. *yumay* 'patrilineages': more literally, 'sperm'.

Calla's descendants are today the Gonzalo⁸²² Paucar Casa and the Lazaca Canya, those people.

All these people have multiplied from the five men who came from Yauri Llanca.

Only Llacsá Misa's descendants are now completely extinct.

822. Reading the abbreviated baptismal name as *j°* rather than *g°*, Taylor (1987b: 487) gives "Juan."

The Lázaro, Hualla's children, have inherited their office because they're Llacsá Misa's kin, and they say, "We're the Llacsá Misa."

This much is all we know about the life of the Concha.

The end.⁸²³

823. *fin* 'the end': in Spanish.

In what follows, we shall explain case by case what we know⁸²⁵ happened in all these villages in the old days, and still does up to now, when a person gives birth to two babies in just one birth, whether they are a boy and a girl, or both boys, or both girls.

We call⁸²⁶ those who are born this way *curi*.⁸²⁷

- 448 When babies were born like this, even if they were born unexpectedly in some other village, people would bring them to their home village that very night.

For example, in the old days, if twins were born in Sucya Cancha or Tumna, people would bring them right away to the Checa village called Llacsa Tambo.⁸²⁸

824. A cross-shaped symbol (*crismón*) appears at the top of the page.

825. 'We know' supplied to indicate witness validation, which predominates throughout the two supplements except where otherwise indicated.

826. *ñinchin* 'we call': an unusual form, perhaps a slip of the tongue or pen due to indecision between *ñinchic* (inclusive first person plural) and *ñin* (third person).

827. The persecutors of "idolatry" from Avila onward attacked twin cults. Arriaga ([1621] 1968: 20–21, 53; Keating's translation) mentions that "bodies of *chuchus*" were commonly venerated and kept in houses. *Chuchu* means a body of a twin or also a double or multiple fruit. He notes: "Human twins are called *curi*, which means two born of one womb, and if they die young, they keep them in jars in the house as a sacred object. One of them, they say, is the son of the lightning. They have many superstitions regarding the birth of twins, . . . each of which implies some form of penance, since they must expiate the sin of having been born together. . . . they do not baptize either *chuchus* or *chacpas* [breech birth babies]" ([1621] 1968: 31; Keating's translation).

828. The example of Sucya Cancha suggests that the teller is thinking of trips downslope to trade or produce coca at the Checa's outposts in the lower Rímac valley.

- 449 When carrying them they would by no means carry them during the daytime, for they used to say, "Be careful, <crossed out, in Spanish:> [it freezes] the earth might freeze!"

Maybe those who are privy to such practice follow it all over the region.

When *curi* were born, as soon as it got completely dark the man and woman—that is, the twins' father and mother—would start living fenced in inside a house, and both man and wife would lie there motionless
<margin, in Quechua with partly Spanish gloss:> [lying, that is, on one side]⁸²⁹ until the fifth day.

- 450 On the fifth day, they'd turn over onto their other side.

On that same day, all the father's male in-laws⁸³⁰ would gather in the *curi*'s house and dance while beating their drum themselves.

(At that time, contrary to modern practice, it was the men who beat the drum and not the women.)

829. The couple would be required to lie on a bean or grain, and only allowed to turn over when their body warmth and humidity had germinated it. It is as if their bodies themselves were to counteract the danger of earth's freezing (Arriaga [1621] 1968: 53; Keating's translation).

830. *tucoy masancuna* 'all [his (or their)] male in-laws': the wide extension of this term is made clear by Diego González Holguín: "*massani* brother-in-law of a male; the married man calls his wife's brothers and her male cousins *massaniy*" ([1607] 1842: 215; see also [1608] 1952: 221). *Massani* and *massaniy* are the root *massa* with "empty morph" *-ni-* and first person singular possessive marker *-y* (i.e., 'my *massa*'). Earlier dictionaries include some of the husband's own male consanguineals ("*massa* brother-in-law, brother of the husband"; Santo Tomás [1560] 1951: 319).

Before beginning to dance these rites, they used to consult the demon,⁸³¹ using a spider⁸³² and the object called *pana charapi*,⁸³³ concerning which of his in-laws should lead them by dancing first.

451 Following the demon's word, they'd choose and appoint five of the in-laws who were sitting there.

And these people, from the very moment they got the word, would search for coca day and night, never resting, bartering whatever they had for it.

The other in-laws, thinking only to outdo each other, all joined together no matter how many there were.

452 We mentioned above how the parents turned over on their other side.⁸³⁴

From that time on, the dancers⁸³⁵ never rested from dancing every single night until the fifth day had arrived.

On the day before it did arrive, the in-laws used to show one another a leather bag as if to say, "Tomorrow I'll bring coca in this bag." They'd dance shaking the leather bags⁸³⁶ still empty of coca.

Meanwhile, another five days would have elapsed since the time the parents had turned over on their other side.

So it was ten days in all.

453 On that occasion, beforehand, the five in-laws would catch and bring back a brocket deer, or a *taruca* deer,⁸³⁷ or any other animals that live on the

wild upper slopes. As the leader of those men carried it, the *curi* would emerge onto the open plaza.⁸³⁸

454 And some people would go around blowing the conch trumpet called *paya*.

And some would go around carrying a *pupuna*, <margin, in Spanish:> [It is the staff with the thong for catching parrots but not with such a long thong.]⁸³⁹

And some others went around carrying *sacaya*. (This material called *sacaya* was a little maize ground up with some *ticti*.)

Different people carried this stuff.

As for the people who carried these items, it wasn't the *curi*'s in-laws who carried them. It was rather their close blood relatives who carried them.

The brocket deer was the only thing the leader of the in-laws carried.

455 As soon as people had seized the brocket deer, they would force it to step around with its hooves, starting from the dwelling place where the *curi* were fenced in, saying,

"This is the one who has confused you,
Who has outraged you!"⁸⁴⁰

<margin, in Spanish:> [And then they took it out and killed it.]

And all the people would eat its meat immediately, leaving absolutely nothing over as remnants.

831. *supayta* 'the demon': while to Christian ears *supay* meant a devil, this sentence may reflect the word's older sense 'a spirit' or volatile *ánima*. Since the twin ritual is concerned with the propagation of families, its divinations may have called on ancestral shades.

832. See chapter 28 (sec. 370).

833. Untranslated.

834. To begin germinating the second seed of their penance. 'Parents' supplied.

835. 'Dancers' supplied.

836. *hina mana cocayocta huayacallactas taquichic carcancu*: could also mean 'thus they made [the in-laws] who had no coca bags dance'. 'Shake' is an attempt to render the effect of *huayacallactas taquichic*, more literally, 'making the bags [without coca] dance'. *Taquichiy* is the verb used in all instances where celebrants dance displaying animal skins or human trophies. In chapter 9 (sec. 128) a skin bag full of coca is taken as a sacrifice in lieu of an animal. These data suggest a close symmetry between the coca hunt and the deer hunt in section 453.

837. *tarucactapas* 'taruca deer': *Hippocamelus antisensis*, a deer larger than the brocket deer, found at altitudes over 3,000 m in the southern Andes and at higher

ones in the north (Renard-Casevitz 1979: 21–22; see also Cabrera and Yepes 1940: 271–272).

838. *pampa* 'open plaza': *pampa* means any flat place, but since the context is the *curi* parents' return to their home ceremonial center, the scene is likely to be a plaza.

839. The *pupuna* is also the reed with which Cuni Raya opened the waterways in chapter 2 (sec. 9).

840. *tacurisonqui apllasonqui* 'has confused you, [who] has outraged you': tentative translation of a difficult passage. *Tacuri-* is thought to be from the verb "*ttakuini o ttacuni o chacruni* to mix or interpose one thing with another" (González Holguín [1608] 1952: 335). The derivatives concern confusion, such as turning a house upside down looking for something. *Aplla-* is likely to be *haplla* (González Holguín [1608] 1952: 150) as, for example, in *haplla sonco* ('*haplla*-hearted') meaning 'the person who is in the habit of wrath and quarreling and who is overly rude'. Its derivatives concern words of anger or losing one's temper. Perhaps the point is that the deer is taken as a scapegoat for what has confused the parents' reproductive process. But alternatively the parents themselves could also be subjects of these verbs.

456 Then, as we just said, on the tenth day, they went out onto the open plaza. Afterward, the *curi* went wrapped in a large piece of cloth, shrouded from view, while some people, namely, the in-laws in groups of two or three,⁸⁴¹ would pull them along wailing and dancing.

Those who pulled them would also pull the *curi*'s *ayllu* relatives. They used to pull them along, and as they pulled they said, "We'll give you a field or something like that, we'll give you a llama."

457 When arriving at the open plaza, the in-laws used to carry the brocket deer's skin
<margin, in Spanish:> [That is, the pelt and the head stuffed with straw, because the flesh had already been eaten as was mentioned.]
with great ostentation, just as we do today when we carry the base of the cross at the head of a procession.⁸⁴²

<margin, in Spanish:> [the base of the cross]
Those who carried *pupunas* went brandishing them like spears as if to say, "I'll throw!" and striking combative poses over and over again. The one who came first among them struck threatening poses at the *curi* who came along in the rear.

458 When the people who were carrying the brocket deer's skin arrived at the plaza, a man and a woman who were *ayllu* kin to the *curi* offered them a llama or a field. As they did, they would say, "Rest with these gifts"⁸⁴³ and put them at their ease. Then the *curi* went to their ordained⁸⁴⁴ seats and the couple would sit there richly honored, both the husband and the wife together.

459 On that day, all the in-laws would compete in giving away their coca, and they'd dance and drink all day long.

In the evening they'd go back home and return to the same place where they'd dwelt before.

They remained there for another five days.

When those five days were complete, people used

to accompany⁸⁴⁵ them back to the⁸⁴⁶ <crossed out:> [seat] sealed lodging.⁸⁴⁷

460 Right after this, their in-laws brought firewood and built a big bonfire,⁸⁴⁸ as at the beginning, right on the next day after the *curi* were born—we forgot to tell this in our earlier account
<margin, in Spanish:> [What has to go with this is at the beginning.<?>]

—when they collected firewood every night, and, saying, "It will burn until dawn, lest some temptation befall," they lingered there⁸⁴⁹ all night.⁸⁵⁰

So that fire never died until after the rituals,⁸⁵¹ not even for a single night.

461 Afterward, once they finished all these rituals, they led the *curi*
<margin, in Quechua:> [and also their parents] to a certain demon of theirs and asked, "Where shall we wash them clean of their fault?" They'd take them to Yansa lake,
<margin, in Spanish:> [that is, where the Conchas' water comes from]
in due order,⁸⁵² following the demon's command.

845. *asuchic* 'accompany': not attested in old sources; Lira's modern Cuzco dictionary ([1941] n.d.: 22) has an apparently related verb *assuy* meaning 'to approach, to come close, to make one thing closer to another'.

846. Or 'to another'.

847. *aposeñtoman* 'to the sealed lodging': the following excerpt from a 1656 "idolatri" trial shows that this Spanish word served to designate the specially enclosed house in which (sec. 449) parents of twins were sequestered: "When two are born from one belly, which they call *chuchus*, the wizards [i.e., *huaca* priests] require their parents to fast five days, during each one of which they eat only one row of grains from one maize cob, and during these five days no one may see them, and when they bring food to the said fasting person, who is enclosed in an *aposeñto*, they cover their eyes so as not to see them . . ." (Duviols 1986: 164). The Huarochirí manuscript original has a crossed-out word *tiana*, which *aposeñto* replaces. *Tiana* means a dwelling, and sometimes a ceremonial stool or seat.

848. *collo camacta* 'bonfire': conjectural translation.

849. *cayta* (*ca*)*corcan* 'they lingered there': from *cay* 'to be' with reflexive *-cu-*, *cayta* 'around here or toward here' (González Holguín [1608] 1952: 53).

850. The sense seems to be that, warming themselves by the fire, they stayed near the ritual house all night so the *curi* parents would not be tempted to lapse from their special discipline.

851. 'The rituals' supplied here and in the next sentence.

852. 'In due order': problematic translation. The origi-

841. *masacunapas yscay quimça* 'the in-laws in groups of two or three': could also be read 'their in-laws, two or three of them', but this makes it difficult to see how they could pull the many people mentioned in the next sentence.

842. Arriaga ([1621] 1968: 53; Keating's translation) mentions that the deer was made into a canopy under which the penitent parents passed.

843. 'Gifts' supplied.

844. *unanchascaman* 'to . . . ordained': may mean the place had been chosen by a priestly divination.

462 There a man with the title of Con Churi,⁸⁵³ who was that demon's priest, used to ask the earth about them.

They say⁸⁵⁴ he would ask,

"Why were they born as *curi*?
For what faults of theirs, and how many?"

About those born *curi* people reportedly said,
"They're born so in exchange for someone's death."⁸⁵⁵
<margin, in Spanish:> [This is the opinion of the common people and not the answer.]

463 Then, saying,
"It's for this offense,"

or

"It's for that offense,"
people would wash both parents. They also bathed the two babies, washing them over and over again, even to the point where they were almost dying

nal text is an abbreviation, *hord^am^a*, for which we suggest the expansion *hordenadamende* 'in due order' or alternatively *hordinariamende* 'normally', 'usually'. Other translations provide the reading 'heretically' (*hereticamente*). Our reading is partly suggested by the fact that *hordenam^y* meaning *hordenamyento* 'ordinance' and *hordin^a* meaning *hordinario* 'ordinary' are common abbreviations of the period (Cavallini de Araúz 1986: 59; Rostworowski 1988: 294). The various derivatives of *her^ejia* 'heresy' are rarely if ever abbreviated. Moreover, *hereticamente* in this context would be surprising since the manuscript does not concern heresies (which at that time typically meant Protestant teachings) but "idolatries" or "gentile" practices. Nor does the visit to Yansa lake seem any more "heretical" than the rest of the ritual.

853. See chapter 13 (sec. 185). The fact that a *con churi* priest, who is specifically a lineage authority, officiated in this ceremony suggests once more that *supay* in the context of twin ritual denotes an ancestral shade.

854. 'They say' supplied to indicate that this sentence has reportive validation, as do several others up to the end of section 467. The validation shifts do not mark transitions as sharp as those in the numbered chapters and are hard to interpret, but the first sentence of section 468 seems to suggest that this part is an interpolated portion of testimony after which the author returns to writing with witness validation.

855. *huañuynin* 'someone's death': attempts to render the ambiguity of the third person possessive -n. Whose death is not clear in this passage. But Hernández Príncipe ([1613] 1919: 188) explains that the birth of an extra baby via twinning was understood as restitution given by the deity of lightning to a family one of whose ancestors had been struck or killed by lightning.

from cold, until at last it was said, "That's enough for the seriousness of their fault."

464 Once they'd finished all this, they used to cut the male's hair. They clipped just a little of the female's hair, but, as for the male,⁸⁵⁶ they sheared his off as we do⁸⁵⁷ with sinners.⁸⁵⁸

Then, it's said,⁸⁵⁹ they returned with the *huachay ruco*.⁸⁶⁰

People put on them a necklace with black and white intertwined strands, which was the sign of a *curi*.

<margin, in Spanish:> [somewhat like a golden chain]

465 Then they admonished them,

"You must fast for one whole year.
Neither you nor you may sin sexually⁸⁶¹ with anyone.

<margin, in Spanish:> [not with each other either]

If you do, you'll be doing a very bad thing.
You'll have fatigued our in-laws⁸⁶² in vain."

So they advised them.

466 When half the year was over, the priest and a lot
<margin, in Quechua:> [a lot]

856. *huarmictaca* . . . *carictaca* 'the female . . . the male': the terms denote gender alone. *Huarmi* can mean 'wife', but *cari* is not a synonym of *cosa* 'husband'. So this sentence leaves doubt about whether the parents or the twins are shorn.

857. *rutunchic* 'as we [inclusive, i.e., addressee as well as speaker] do': this implies the speaker identifies with this common practice of "extirpators of idolatry." Taylor (1987b: 502–503) reads *rutunqui* 'you cut', in which case 'you' could mean Avila or another cleric or church officer.

858. 'As we do with sinners' is witness-validated.

859. 'It's said' supplied to indicate reportive validation, which continues to predominate through the end of section 467.

860. *huachay ruco* may mean 'birth headdress' (González Holguín [1608] 1952: 168; Taylor 1987b: 503).

861. *hochalliconqui* 'sin sexually': using the word with which the church translated 'to sin'. But since in this case sex would violate an Andean, not Catholic, norm the usage may not be colonial: that is, the sin inheres not in sex, but in having sex at the wrong moment.

862. *masanchiccunacta* 'our in-laws' with inclusive first person plural possessive marker: implying that the persons in question are in-laws of both addressee and speaker.

of other people would ask their demon, "Have the twins' parents⁸⁶³ lived right?"

If it turned out all right, they'd be delighted. But <crossed out:> [If it wasn't good,] if he said, "They did sleep together,"

<margin, in Spanish:> [that they had sexual intercourse]

then people would give them a good tongue-lashing.

467 The in-laws would get really mad and berate them: "How dare you wear us out with this burden all for nothing?"

They used to go after them like that until the end of the year.

Only then would they cut their necklace.

In this way, they say,⁸⁶⁴ they finished the thing.

468 Now we'll complete⁸⁶⁵ what we have just said.

If the twins were born both males or both females, people would say, "Times aren't going to be good."

"There'll be times of terrible hardship."

But if they were born male and female, people interpreted it as a good sign.

469 And as for today's in-laws, on one hand, they're pleased that they don't have to spend as much as they did in the old times.

On the other hand, they may regret it, too, when they think, "We don't do it like that anymore." In some villages, because of the demon's deceptions, they may not have forgotten these practices.

470 At night, or at any other time, when twin llamas are born, they used to ask the demon for their names one by one, inquiring,

"What twin person will he be?"

The names that the demon bestowed were Curi Ñaupa, Curi Yauri, Curi Huaman, Ticlla Curi,⁸⁶⁶ or any other name that says *curi*.

It was done⁸⁶⁷ that way for each one, whether male or female.

471 Any number of people who are now wealthy in silver used to put all their effort into trading away everything they had for coca during Paria Caca's feast or any other festival, because they didn't yet understand the word of the good God. It was the only thing they'd raise money for, even if they'd had only three or four years to recover from the last festival.

As for the poor, every year they worried, wondering,

"Where'll I find coca?"

"Will I be humiliated this way?"

They searched for it, bartering away their fields and clothing for coca, wandering hither and yon, going up to the guanaco pastures and searching for brocket deer while they themselves went hungry.

472 For the sake of this duty, those who were mindful of such practices used to go to enormous trouble and, fasting rigorously, asked their demon first of all,

"Where'll I find coca?"⁸⁶⁸

"Trading a guanaco for it?"

"Or should I trade off⁸⁶⁹ one of my fields, or my clothing?"

"What'll happen to me?"

473 Nowadays, because they have another attitude and don't think so much about this custom,⁸⁷⁰ and also because they no longer have to trade off any of their things on account of it, people feel well contented.

On the other hand, they also do cry about it a lot, saying, "Why is it that we don't do these things now?"

474 The time for this rite was at night or at any other

863. 'The twins' parents' supplied.

864. 'They say' supplied to indicate the end of a passage in which reportive validation predominates.

865. *tincuchison* 'we'll complete': the verb implies symmetry and suggests that what follows will not just add to, but will complement or match what went before. The phrase may mean that the teller will now make good on a promise to deal 'case by case' with mixed-sex, two-boy, and two-girl births (sec. 447). Or it may mean that in the next passage, which returns to witness validation, he or she will complement the data given by the source whose words are reported in sections 462–467.

866. The meanings of these names are: Curi Ñaupa

'Twin Leader', Curi Yauri 'Twin Scepter' (González Holguín [1608] 1952: 347), Curi Huaman 'Twin Falcon', and Ticlla Curi 'Two-colored Twin'.

867. 'It was done' supplied.

868. 'Coca' supplied.

869. *huaclichisac* 'should I trade off': this verb means "to damage one's capital or leave it just barely begun or a small amount already spent, or to damage in departing, or to go away damaging something" (González Holguín [1608] 1952: 170). The concept seems to be that of spending off productive assets and thereby damaging one's own livelihood.

870. 'Custom' supplied.

time that Macoy Llenco designated by declaring, "It'll be on so-and-so a date." At such times people used to cheer up and become merry, the old men and lots of old ladies would go carrying their *ticti* and their other things, for there'd be drinks at the old house⁸⁷¹ or maybe even right here.

871. *ñaupā huasipi* 'at the old house': *ñaupā* is more

475 Right in this village people probably abstain from this practice, more or less, even though they may do it at night. We think that in other villages outside of here people do practice it, and we hear as much, too.

strictly 'former'. The phrase may refer to dwellings from before the forced resettlements (c. 1580 onward in this area) or to prehispanic buildings.

[Supplement II]⁸⁷² JHS⁸⁷³

When we speak of an *ata*, we mean a child born with a reverse whorl⁸⁷⁴ in its hair.

<margin, in Spanish:> [their hair<?> goes backward]⁸⁷⁵

About a person who's born like this:

When the baby turns three years old, its elders get together in the house or in the courtyard. Starting at broad daylight,⁸⁷⁶ they first inform the father's⁸⁷⁷ brothers-in-law or his fathers-in-law,⁸⁷⁸ say-

872. A cross appears at the top of the page. In combination with the monogram JHS that appears below it, this forms the conventional symbol called *lábaro*.

873. The abbreviation JHS is a latinization of the Greek monogram ΙΗΣ 'Jesus'. JHS and its equivalent IHS were popularly interpreted *Jesus Hominum Salvator* 'Jesus, savior of men' or *In Hoc Signo* 'in this sign' (i.e., *In Hoc Signo Vincas* 'in this sign shall you conquer'). But its characteristically Jesuit interpretation may be more relevant, given the early Jesuit penetration of the region and given Father Avila's own Jesuit education. This reading is *Iesum Habemus Socium* 'we have Jesus as a companion' (Cross 1957: 678). *Socium* might also resonate with the Andean ideal of social obligation between humans and sacred beings.

874. *parca* 'reverse whorl': a tentative translation. *Parca* can mean a plural whorl (Albornoz [1583?] 1984: 196) or a six-fingered birth (González Holguín [1608] 1952: 279). Perhaps its sense was generic, 'a bodily anomaly'. 'Reverse' derives from Urioste's transcription of the barely legible marginal note. Taylor's reading also seems to refer to hair but does not mention reversal.

875. Taylor (1987b: 512) reads the obscure marginal note as "on some it tangles and others not" (*a alg(un)os se les /maraña y a otros/no*).

876. *pacsac punchaomanta* 'Starting at broad daylight': based on González Holguín ([1608] 1952: 271) "*pacsá* 'resplendent'." Taylor (1987b: 512) reads *pusac* 'eight', that is, eight days ahead of time.

877. 'The father's' supplied, on basis that *massa* (see note 830) and *caca* are terms explicated with reference

ing, "On that day we'll cut the hair of this *ata* and *illa*⁸⁷⁹ of Paria Caca."⁸⁸⁰ (When we speak of an *illa*, we mean just the same thing as an *ata*.)

to a male ego in the colonial Quechua dictionaries and grammars.

878. *cacancunacta* 'fathers-in-law': an inadequate translation, because no English term corresponds to the same set of relatives as *caca*. Quechuists contemporary with the manuscript said *caca* could mean maternal uncle: "*caca* the uncle who is the mother's brother" (González Holguín [1608] 1952: 42). But the same author's grammar treatise gives additional senses:

Caca, the son-in-law's father-in-law, namely his wife's father, both the son-in-law and his first cousins call both the father-in-law and his father "my *caca*."

The married man and his brothers as well also address those of their male in-laws who are brothers of his (the married man's) mother-in-law as "my *caca*." (González Holguín [1607] 1842: 214–215)

Ricardo ([1586] 1951: 98) gives usages of *caca* including father and brother of male ego's wife. Zuidema (1977: 20) suggests that the term groups together those male consanguines of male ego's son who do not partake of the patrilineal bond between ego and son. It is to the *massa* (see notes 830, 877) and *caca* (Santo Tomás [1560] 1951: 240, 319) categories that parents of *parca* owe restitution for the disturbance of procreation that irregular births represent.

879. "*ylla* the large bezoar stone, a notable one as big as an egg or bigger, which they carry with them as a charm to become rich and lucky" (González Holguín [1608] 1952: 366), and more broadly, any sort of amulet stone or effigy (see chap. 9, sec. 134); the term is associated with the cult of lightning. Irregular births, too, were attributed to lightning (see note 827).

880. An infant's first haircutting is still a common *rite de passage* in the Andes (Zamalloa González 1972: 28–29) and follows approximately the same pattern described here. The parents place the baby on a blanket

477 So they let everyone know about it, and begin to brew maize beer. When people hear someone say, "They're brewing half a *fanega*⁸⁸¹ of maize, maybe a whole one!" they ask one another, "What could that maize beer be for?"

Once they find out what day the fiesta will take place, all the people gather together on that day.

478 The *ata's* father⁸⁸² sits with his brothers-in-law and all the men who rank as his fathers-in-law,⁸⁸³ but down by the low end, and he begins to dance and serve them drinks.

When they get good and drunk, they spread out a blanket or a cover⁸⁸⁴ and make the baby go to its center and sit there, and they make this speech:

"Fathers and brothers,
Today we'll cut the hair of this *ata*, this *illa*;

For he's Paria Caca's and Tutay Quiri's *ata* and *illa*,
And it's they who have sent him to me to be born so."

479 On that occasion, the baby's nearest maternal uncle⁸⁸⁵ if he was a boy, or her nearest paternal aunt if she was a girl, or alternatively the baby's grandfather or grandmother,⁸⁸⁶ would stand up and put on the blanket a token representing a llama or a field, and approach the *ata* with a pair of scissors.⁸⁸⁷

with kin and guests around it. The guests, in return for each snip of the baby's hair, give or promise gifts for its future welfare. They bind themselves to the child by accepting drinks from the hosts. The rite is generally called a form of godparentage (*compadrazgo*) today.

881. 'half a *fanega*': Spanish bulk measure; about 0.8 bushel or 29 liters.

882. *atayuc runaca* 'the *ata's* father': could also mean 'the person(s) who has (have) the *ata*', that is, both parents. We choose 'father' because this person is said to have *caca* and *massa*, terms used relative to a male ego.

883. *cacancunahuampas* 'the men who rank as his fathers-in-law': for reasons given in note 878 to section 476.

884. *titacta* 'cover': see note 794 to chapter 31 (sec. 426).

885. *cacan* '[*ata's*] maternal uncle': "*caca* the uncle who is the mother's brother" (González Holguín [1608] 1952: 42) seems the more applicable sense of *caca* when referring to a child ego since the other usages apply to married males; *ypan* 'paternal aunt' (González Holguín [1608] 1952: 369; Santo Tomás [1560] 1951: 301)

886. Assuming the immediately preceding glosses of *cacan* and *ypan* are right, these words probably imply maternal grandfather and paternal grandmother, respectively.

887. Scissors are a European tool, suggesting that the narrative concerns post-1532 times.

(The llama's token is an object called *cot huato*, one with which they had led a llama to Paria Caca.) <margin, in Spanish:> [*cot huato* is llama harness]

480 They would also put a token for a field there, called *caxo*.

(This *caxo* was just a stick, a digging tool for women.)

Then the *ata's* close blood relatives would stand up, one at a time, and make offerings of cloaks and tunics, of sheep⁸⁸⁸ or wool, according to their relationship.⁸⁸⁹

481 Once the close blood relatives had finished, the *curaca* or the *alcalde* would get up, starting from the leading positions, and put in one or two *reales* of money.

Thinking, "These people will get even drunker by the time they finish, and the drunker they get the surer it is that they won't hold back on anything," the parents⁸⁹⁰ would make them drink hard until nightfall.⁸⁹¹

482 Once they all finished clipping the hair, it was⁸⁹² the *ata's* father who'd shear it all off the child, for the others would barely have snipped at it. As soon as he finished, he'd immediately start the dancing, calling out his ancestors' names:

"Father Anchi Puma!"

or

"Carhua Chachapa!"

or any other name. They danced and took their ease, saying,

888. *ovejahuanpas* 'of a sheep': using the Spanish word for the Old World animal. Throughout the manuscript sacrificial goods are consistently of Andean provenience, and it is true that c. 1600 *oveja de la tierra* 'native sheep' could still mean 'llama'. But this gift, offered to the child's estate and not for sacrifice, might really be a Spanish sheep. Spanish sheep were herded through many parts of the Andes well before 1600.

889. *cascancama* 'according to their relationship': or 'according to what they had'.

890. Subject is an unspecified third person: the parents? the *alcalde*? The former makes sense since it was in their interest to maximize the gifts.

891. *pacha huraycuscancama*: more literally, 'until *pacha* descends'; translation uses an unattested but plausible meaning for *pacha*.

892. Or 'is'; many of the verbs in this supplement are ambiguous between agentive present and habitual past tenses because auxiliary verbs (forms of *cay* 'to be') are omitted.

"This is your *ata*, your *illa*,
And now we have finished his rites.

Henceforth may Paria Caca send us no other;
We will do right and be well."⁸⁹³

483 When people mention an *ata* or *illa*, they reportedly⁸⁹⁴ comment, "This is Paria Caca's messenger."

On the evening of the day before the haircutting ritual,
<margin, in Spanish:> [That is, the night before the said day.]

people used to worship Paria Caca and Tutay Quiri with guinea pigs, *ticti*, and other things of theirs, showing deep respect, and saying,

"Put us truly at peace with this *ata*,
Tomorrow we'll truly be happy."

484 "This is the sign of a *curi*," people say. "He has sent this *ata* to foretell the coming of a *curi*. People haven't minded their debts to Paria Caca properly, and for this, *curi* will be born in exchange for someone's death."⁸⁹⁵

893. These two formulas and the one following do not appear to be strict couplets, but they do have a common form consisting of a pairing between a sentence of which the addressed deity is subject and one in which the suppliant speaks of his own conduct.

894. 'Reportedly' supplied to indicate beginning of a passage in which *-si* reportive predominates, continuing up to the fourth sentence of section 484.

895. *huañonan* 'someone's death': whose death, as in supplement I (sec. 462), remains unclear.

"They're born in exchange for their death," they say about those born *curi*.

This is what we know about the people known as the San Damián Checa.⁸⁹⁶

485 Who knows what people say in other villages? However, when an *ata* is born, everything is the same. Everybody reveres them all over this whole *corregimiento* and in the whole region: the Huanca, the Yauyo, the Huaman Tanca, all the kinds of people called Indians.⁸⁹⁷

486 And it's the same in Limac; when someone's child is an *ata* lots of people gather, from the most distinguished to the servants.

And we also know such things about the ones who are mestizos, some of them.

When they saw these rituals, certain people fell into the same sin, thinking, "Maybe this is a good custom!"

We said the same thing: "They should be shorn after they're three years old."

People perform this rite earlier or later, according to their customs.

All of this is a true testimony.

896. This sentence and the remainder of the supplement have witness validation.

897. *runapas yn(di)o ñiscaca* 'people called Indians': a reprise of the phrase that begins the manuscript (preface, sec. 1). The effect is as though "zooming out" back to the wider colonial context by naming three farflung ethnic groups whose territories reach far beyond that of the manuscript.

Glossary of Untranslated Words

The following entries correspond to the non-English words italicized in the translation. Numbers correspond to section numbers in the margin of the translation. Definitions are given where feasible.

alcalde (Spanish): colonial village official (95, 173, 481)
allauca: group name, possibly implying righthand part (moiety?) of a village (157)
añay: a kind of maize (431)
ata: baby with abnormal hair, taken to be a messenger of Paria Caca (476, 478–480, 482–486)
auqui: in this context, untranslated; possibly a ritual ornament or vessel (283)
ayllu: social group, often localized, self-defined as ancestor-focused kindred; scope of term varies (46, 91, 118, 160, 187, 216, 218, 224, 234–237, 240, 243, 282, 309, 316, 330, 331, 333, 354, 357, 369, 385, 388 [title])
bolas (Spanish): hunting weapon made of stones connected by thongs, which entangle prey's legs when thrown (98, 350)
callcallo: untranslated; grasshopper? (413, 415)
canah yauri: lance? belonging to a mummy-*huaca* (320)
cancho: feather-weaving (39, 63)
caqui: toucan? (207)
casira: unidentified type of straw (327)
cassa: feather-weaving (39, 63)
caullama: class of *huacas* guaranteeing fertility of livestock (329)
caxo: women's digging tool (480)
chicsi rampa: litter belonging to Inca (289, 294)
choqui (Jaqi): gold (283)
chumprucu: turban for ritual wear (240, 294)
chupa: a kind of straw (327)
chuta: large target effigy at which lancers threw spears in the Machua festival rites (330, 331, 333, 335, 338, 404)
cori cacya: seashell-shaped insignia of a mummy-*huaca* (320)
corregimiento (Spanish): administrative district of a *corregidor* or Spanish governor of natives (485)
cot huato: llama harness (479)
curaca: a native political lord or noble (86, 101, 173, 174, 176, 231, 244, 245, 296, 317, 481)

curi: twins, considered messengers from Paria Caca (447, 449, 450, 453–462, 464, 470, 484)
doctrina (Spanish): elementary text of Christian doctrine, to be memorized by Indians; also, a parish of Indians (253)
fanega (Spanish): bulk measure equaling about 1.6 bushels or 58 liters (477)
huaca: a superhuman person; any place, object, image (etc.) embodying a superhuman person (3, 6–8, 9, 10, 13–15, 17, 28, 92, 145, 146, 172, 178–180, 182, 183–185, 189, 225, 235–239, 243, 244, 246, 247, 249, 265, 272, 273, 277, 279, 283, 285 [title], 287–289, 293, 301, 317, 318, 319, 325, 336, 347, 370, 378, 379, 407, 408, 412, 429)
huachay ruco: ceremonial garment probably associated with birth; possible synonym of *huaychao* (464)
huacsa: person appointed to a term of priestly duties that included dancing a reenactment of a *huaca*'s life (117, 118, 122, 123, 124, 126, 131, 132, 135, 149, 150, 159, 160, 162, 183, 213, 220, 245, 297, 300, 346, 347, 385, 386, 405, 437, 440, 442)
huana paya: conch trumpet for use in ceremony; possible synonym of *paya* (325, 337, 340)
huancoy: worm or larva; maggot? (368)
huaychao: a ceremonial garment (240)
huayo: human trophy mask made from flayed face (321, 322, 323, 404)
hugi: untranslated; a dangerous animal that Huallallo Caruincho turned loose to afflict Paria Caca (214, 215)
illa: amulet (or) magical person, such as twins (134, 476, 478, 482, 483)
JHS (Latinized Greek): monogram containing the first three Greek letters of the name Jesus, variously interpreted (476)
lataca: a kind of jar associated with the Concha (411)
llacsa anapalla: fly, perhaps bluebottle (367)
llacsa yacolla: stone helmet (394, 396)
llaullaya: untranslated; agricultural tool? garment? (271)
lúcuma: *Lucuma bifer*a, a fruit tree (11)
maca: an edible tuber, probably *Lepidium meyenii* (162)
muro: colored, possibly hard and/or spotted maize (43, 53)

- oca*: an edible tuber, *Oxalis tuberosa* (424)
padre (Spanish): father, Catholic priest (95, 258)
pana charapi: untranslated, object used in divining with spiders (450)
paya: conch trumpet used in ceremony, *see also* huana paya (454)
pupuna: a device for catching birds, made of a reed or cane with a loop or thong (9, 454, 457)
pusuca: untranslated, an insignia of Maca Uisa (294)
puypu: macaw-wing ornament (131, 333)
quinua: edible grain, *Chenopodium quinua* (302, 303, 389, 424)
quipu: mnemonic device made of knotted cords (283, 438)
quisay rinri: ornamental earpool(?) worn by a mummy-huaca (320)
quishuar: a tree, *Buddleia*, used to make ritual enclosures (92)
real (Spanish): Spanish coin, one-eighth of a common peso (262, 481)
reducción (Spanish): Spanish-style village into which natives were forcibly resettled, especially c. 1570–1590 (244)
riti: snow (63)
sacaya: sacrifice for huacas made of ground maize mixed with ticti or thick maize beer (454)
Salve Regina Mater Misericordiæ (Latin): Catholic prayer to Saint Mary (256)
tamta: feather ruff (328)
taruca: a deer, *Hippocamelus antisensis* (453)
ticti: sacrificial food made of thick maize beer residue (91, 99, 138, 170, 281, 337, 387, 438, 454, 474, 483)
tipsi: ? (283)
urpu: ? (283)
vichoc: left-hand part (moiety?) of a village (157, 337)
vihco: spear(?) used in the rite of spearing chuta effigies (328)
villca: high-ranking huaca or huaca priest (10, 13, 14, 43, 45, 154, 289)
visa: untranslated (shield?), insignia of Chuta Cara (324)
yanca: huaca priest by hereditary title (118, 120, 121, 129, 130, 148, 165, 218, 219, 238, 331–333, 335, 339, 403, 434, 438)

Index

Note: This is an index to the translation of the manuscript and does not cover the notes or introduction. Numbers correspond to section numbers in the margin of the translation. Alphabetization is by English rules. Ñ is treated as *n*. *Ch*, *ll*, and *rr* are treated as two characters each and not as single digraph characters as in Spanish.

CONTENTS

SECOND BOOK, WHICH TREATETH OF THE FEASTS AND SACRIFICES BY WHICH THESE NATIVES HONORED THEIR GODS IN THEIR STATE OF INFIDELITY

	<i>Page</i>		<i>Page</i>
First Chapter, concerning the calendar and the feasts of fixed date, the first of which is the one which followeth [Atl caualo]	1	Twenty-second Chapter, in which are described the feast day and the debt-paying which they celebrated in the second month, called, known as Tlacaxipeualiztli	57
Chapter 2. Tlacaxipeualiztli	3	Twenty-third Chapter, which telleth of the feast day and of the honors which they performed during all the days of the fourth month, which was known as Uey toçoztli	61
Chapter 3. Toçoztontli	5	Sixth [Twenty-fourth] Chapter, which relateth the feast and the debt-paying which was celebrated during all the days of the fifth month, which was called Toxcatl	66
Chapter 4. Uei toçoztli	7	Twenty-fifth Chapter, which telleth of the feast and of their offerings which they made during all the days of the sixth month, which was called Etzqualiztli	78
Chapter 5. Toxcatl	9	Twenty-sixth Chapter, in which are related the feast day and the honors done during all the days of the seventh month, which was named Tecuilhuitontli	91
Chapter 6. Etzqualiztli	11	Twenty-seventh Chapter, which telleth of the feast day and of the debt-paying which they celebrated during all the days of the eighth month, which was called Uey tecuilhuitl	96
Chapter 7. Tecuilhuitontli	13	Twenty-eighth Chapter, which telleth of the feast and of the offerings which they made during all the days of the ninth month, which was named Tlaxochimaco	108
Chapter 8. Uei tecuilhuitl	14	Twenty-ninth Chapter, in which are named the feast and the debt-paying which they celebrated during all the days of the tenth month, which was called Xocotl uetzi	111
Chapter 9. Tlaxochimaco	16	Thirtieth Chapter: here are related the feasts and the honors observed during all the days of the eleventh month, which was called, which was known as Ochpaniztli	118
Chapter 10. Xocotl uetzi	17		
Chapter 11. Ochpaniztli	19		
Chapter 12. Teotl eco	21		
Chapter 13. Tepeilhuitl	23		
Chapter 14. Quecholli	25		
Chapter 15. Panquetzaliztli	27		
Chapter 16. Atemoztli	29		
Chapter 17. Tititl	31		
Chapter 18. Izcalli	33		
Chapter 19. [Nemontemi and the movable feasts]	35		
Twentieth Chapter, which telleth of the feast day and the debt-payment which they celebrated during all the days of the month, which they named, which they said was Atl caualo or Quauitl eua	42		
Twenty-first Chapter, which telleth of the honors and the debt-payment which they used to render at the time of the entire second month, which was called Tlacaxipeualiztli ..	47		

	<i>Page</i>
Thirty-first Chapter, which telleth of the feast and the debt-paying which were observed during all the days of the twelfth month, which was named Teotl eco	127
Thirty-second Chapter, in which are related the feast day and debt-paying which were observed during all the days of the thirteenth month, which was known as, which was called Tepeilhuitl	131
Thirty-third Chapter, in which are related the feast day and the debt-paying with which they gave service, which they observed during all the days of the fourteenth month, which was called Quecholli	134
Thirty-fourth Chapter, which telleth of the feasts and the debt-paying which were observed during all the days of the fifteenth month, which was called Panquetzaliztli . . .	141
Thirty-fifth Chapter, which telleth of the feast day and the honors which they observed during all the days of the sixteenth month, which was called Atemoztli	151
Thirty-sixth Chapter, where are related the feast day and the debt-paying which were observed during all the days of the seventeenth month, which was called Tititl	155
Thirty-seventh Chapter, which telleth of the feasts and the honors performed during all the days of the eighteenth month, which was called, which was known as Izcalli	159
Thirty-eighth Chapter, which telleth of the feast which was named Uauhquiltamalqualiztli [The Eating of Tamales Stuffed With Amaranth Greens], which was celebrated at the time it was the tenth [day] of the aforesaid month; and when it was [this time], they celebrated a feast for him who was their god, whose name was Ixcoçauhqui	167

	<i>Page</i>
Appendix to the Second Book	
Temple of Uitzilopochtli. Coatepetl. 1	175
Here is described the feast which was observed every eight years	177
Behold here a true [relation] of all the [buildings] which were the Mexicans' temples . . .	179
Here is told in what manner the Mexicans made offerings and what they made as offerings in their temples	194
Here are told the various modes in which blood was shed [and] offered	197
Here are told, in very truth, the offerings which they made, with which they paid honor to the devil	201
A declaration of still other offerings with which similarly they paid honor to the devil	203
A declaration of all those who served in the homes of each of the gods	206
A declaration of how the sun was served, and of how many times trumpets were blown during the day and during the night, and of how many times incense was offered	216
A declaration of the training or the labors which were done in the temples, in the devils' houses	218
A declaration of how the devils were prayed to, and how oaths were made	220
Here is told what the songs of the devils were, with which they paid honor to them within their temples and indeed without	221
An account of how the women served there in the temples	246

De las Cerimonjas

SECOND BOOK, WHICH TREATETH OF THE FEASTS AND SACRIFICES BY WHICH THESE NATIVES HONORED THEIR GODS IN THEIR STATE OF INFIDELITY.

LIBRO SEGUNDO QUE TRATA DE LAS FIESTAS, Y SACRIFICIOS: CON QUE ESTOS NATURALES, HONRRAUAN A SUS DIOS, EN EL TIEMPO DE SU INFIDELIDAD.

First Chapter, concerning the calendar and the feasts of fixed date, the first of which is the one which followeth.¹

The first month of the year was called, among the Mexicans, *Atl caualo*, and in other parts *Quauitl eua*. This month began upon the second day of February, when we celebrate the Purification of Our Lady. On the first day of this month, they celebrated a feast in honor—according to some—of the *Tlaloc* gods, whom they held to be gods of rain; [or]—according to others—of their sister, the goddess of water, *Chalchiuhtli icue*; [or]—according to [still] others—in honor of the great priest or god of the winds, *Quetzalcoatl*. And we may say that [they celebrated the feast] in honor of all of these. This month and all the rest, which are eighteen [in number], each have twenty days.

Capitulo primero, del canlendario, de las fiestas fixas, la primera de las quales es lo que se sigue.

El primero mes, del año se llamaua entre los mexicanos *Atl caoalo*: y en otras partes *quauitl eoa*. Este mes començaua en el segundo día del mes de Hebrero quando nosotros celebramos, la purificacion, de nuestra señora. En el primero día deste mes: celebrauan vna fiesta a honrra (segun algunos) de los dioses *tlaloques*, que los tenjan por dioses de la pluujá: y segun otros de su hermana, la diosa del agua, *chalchiuhtli ycue*: y segun otros a honrra del gran sacerdote, o dios de los vientos *quetzalcoatl*: y podemos dezir, que a hõrra de todos estos. Este mes, con todos los de mas, que son deziocho tienen a cada veynte dias.

Atl caualo or Quauitl eua

In this month they slew many children; they sacrificed them in many places upon the mountain tops, tearing from them their hearts, in honor of the gods of water, so that these might give them water or rain.

The children whom they slew they decked in rich finery to take them to be killed; and they carried them in litters upon their shoulders. And the litter went adorned with feathers and flowers. [The

3. Marginal notation: *Cuenta del calēdario romano*.

priests] proceeded playing [musical instruments], singing, and dancing before them.

When they took the children to be slain, if they wept and shed many tears, those who carried them rejoiced, for they took [it] as an omen that they would have much rain that year.

Also in this month they slew many captives in honor of these same gods of the water. They slashed them first, [with their swords,] fighting them as they were tied upon a stone like a mill wheel; and when they threw them down, wounded, they carried them off to tear their hearts from them in the temple which was called Yopico.

When they slew these captives, their owners—they who had taken them—went gloriously arrayed in feathers, dancing before them and showing their valor. This continued through all the days of this month. In this feast were enacted many other ceremonies, which are set down at length in its telling (*fol.* 15).

dioses del agua: acuchillauanlos primero peleando cõ
ellos, atados sobre vna piedra, como muela de molino,
y desde los derrocauan acuchillados: lleuauanlos a
sacar el coraçon al templo, que se llamaua, iopico.

Quando matauan a estos captiuos: los dueños dellos, que los aujan captiuado, yvan gloriosamente ataujados cõ plumajes, y baylando delante dellos, mostrando su valentia. Esto pasaua por todos los días, deste mes. Otras muchas cerjmonjas, se hazian en esta fiesta: las quales estan escriptas a la larga, en su historja. fo. 15.

The second month they named Tlacaxipeualiztli. On the first day of this month they celebrated a feast in honor of the god called Totec—[or], as another name, called Xipe—when they slew and flayed many slaves and captives.

Chapter 2 Tlacaxipeualiztli

From the captives whom they were to slay the owners themselves tore off the hair of the crowns of their heads and kept it as a relic. This they did in the *calpulco* before the fire.

When the masters of the captives took their slaves to the temple where they were to slay them, they took them by the hair. And when they took them up the steps of the pyramid, some of the captives swooned, and their masters pulled them up and dragged them by the hair to the sacrificial stone where they were to die.

Having brought them to the sacrificial stone, which was a stone of three hands in height, or a little more, and two in width,¹ or almost, they threw them upon it, on their backs, and five [priests] seized them—two by the legs, two by the arms, and one by the head; and then came the priest who was to kill him. And he struck him with a flint [knife], held in both hands and made in the manner of a large lance head, between the breasts. And into the gash which he made, he thrust his hand and tore from [the victim] his heart; and then he offered it to the sun and cast it into a gourd vessel.

After having torn their hearts from them and poured the blood into a gourd vessel, which the master of the slain man himself received, they started the body rolling down the pyramid steps. It came to rest upon a small square below. There some old men, whom they called Quaquacuilton, laid hold of it and carried it to their *calpulco*, where they dismembered it and divided it up in order to eat it.

Al segundo mes, llamauan tlacaxipeualiztli. En el primero día deste mes: hazian vna fiesta a honrra del dios llamado Totec, y por otro nombre se llamaua xipe: donde matauan, y desollauan muchos esclauos y captiuos.

luego el sacerdote, que le auja de matar, y dauale con ambas manos, con vna piedra de pedernal: hecha a manera de hierro de lançon por los pechos, y por el agujero que hazia: metia la mano, y arrancauale el coraçon, y luego le ofrecia al sol, echauale en vna xicara.

Despues de auerles sacado el coraçon, y despues de auer echado la sangre en vna xicara: la qual recebia el señor del mjsmo muerto: echauan el cuerpo a rrodar por las gradas abaxo del cu, yua a parar, en vna placeta abaxo: de alli le tomauan, vnos viejos, que llamavan quaquacujlti, y le lleuauã a su calpul: donde le despedaçauan, y le repartian pa comer.

1. Actually a *palmo*, according to the *Diccionario de la lengua española* of the Real Academia Española, is equal to one-quarter of a *vara*; divided into twelve equal parts (*dedos* or fingers), it is the equivalent of about 21 cm or about eight and one-quarter inches.

2. Marginal notation: *Cathedra sancti petri*.

3. Marginal notation: *Martius habet dies xxxj*.

4. Marginal notation: *leandri archiepi et conf*.

Before they dismembered the captives, they flayed them; and others put on the skins, and, [wearing them,] fought mock fights with other youths, as if it were a war. And those [of one band] took captive [those of] the other [band].

After what hath been set forth above, they slew other captives, battling with them—these being tied, by the waist, with a rope which passed through the socket of a round stone, as of a mill; and [the rope] was long enough so that [the captive] might walk about the complete circumference of the stone. And they gave him arms with which he might do battle; and four warriors came against him with swords and shields, and one by one they exchanged sword blows with him until they vanquished him. Etc.

Antes que hiziessen pedaços a los catiuos: los desollauan, y otros vestian sus pellejos, y escaramuçauan con ellos, con otros mancebos, como cosa de guerra: y se prendian los vnos a los otros.

Despues de lo arriba dicho: matauan otros captiuos, peleando con ellos: y estando ellos atados por medio del cuerpo, con vna sogá, que salia por el ojo de vna muela, como de molino, y era tan larga, que podia a andar por toda la circũferencia de la piedra, y dauanle sus armas, con que peleasse: y venjan contra el quatro, con espadas, y rodela, y vno a vno se acuchillauan con el, hasta que le vencian. Etc.

The third month they called Toçoztontli. On the first day of this month they observed a feast to the god named Tlaloc, who is the god of rain. On this feast they slew many children upon the mountains. They offered them as sacrifices to this god and to his companions, so that they would give them water.

Chapter 3 Toçoztontli

On this feast they offered the first fruits of the flowers which had bloomed earliest that year, on the pyramid named Yopico. And before they had offered them, none dared smell a flower.

Those in charge of the flowers, who are called *xochimanque*, celebrated a feast to their goddess, named Coatlicue, or by another name Coatlan tonan.

Likewise in this month, those who had worn the skins of the dead [sacrificial victims] whom they had flayed the previous month, took [them] off. They went to cast them into a cave in the pyramid which they called Yopico; they went in procession to do this, and [performed] many ceremonies. They went stinking like dead dogs. And after they had left them [in the cave], they washed themselves, [performing] many ceremonies. A number of the sick made vows to attend this procession, in order to recover from their sickness, and they say that some [of them] recovered.

The masters of the [sacrificed and flayed] captives, with all those of their households, did penance for twenty days: neither did they bathe nor wash their heads until the skins of the dead captives were deposited in the cave mentioned above. They said that they did penance for their captives.

After they had ended the penance, they bathed and washed themselves, and summoned all their kin and friends, and gave them food. And they performed many ceremonies with the bones of the dead captives.

Al tercero mes, llamavan toçoztontli: en el primer dia deste mes, hazian fiesta al dios llamado Tlaloc: que es dios de las pluujas. En esta fiesta, matauã muchos njños, sobre los montes: ofrecianlos en sacrificio a este dios, y a sus compañeros, para que los diessen agua.

Despues que aujan acabado la penjtencia: bañauanse, y lauauanse, y combidauan a todos, sus parientes, y amigos, y dauanles comjda: y hazian muchas cerjmonjas, con los huesos, de los catiuos muertos.

1. Marginal notation: *Aprilis habet dies xxx.*

2. Marginal notation: *Mariae egiptiaca.*

During all of these twenty days, until the coming of the next month, they practised singing in the houses which they called *cuicacalli*. They did not dance; rather, remaining seated, they sang canticles in praise of their gods. Many other rites were performed in this feast which are set forth at length in the accounting of them, *fol.* 27.

Todos estos veynte dias, hasta llegar al mes que viene: se exercitauan en cantar en las casas, que llamauan cujcacali, no baylauã, sino estando sentados: cantauan cantares a loor de sus dioses. Otras muchas cerjmonjas, se hazian en esta fiesta: las quales, estan escriptas, a la larga en su historia. fol. 27.

The fourth month they called Uei toçoztli. On the first day of this month they celebrated a feast in honor of the god named Cinteotl, whom they regarded as god of maize. In his honor they fasted four days before the arrival of the feast.

Chapter 4 Uei toçoztli

In this feast they placed reeds at the doors of the houses. They sprinkled them with the blood from their ears or from the calves of their legs. Besides these, the nobles and the rich set up in their houses some branches which they called *acxoyatl*. Likewise, they set up branches for their gods, and set forth flowers for [the gods] which each one had in his house.

After this, they went about the maize fields and brought stalks of the maize (which was still small), and they garnished them with flowers and went to place them before their gods, in the house called *calpulli*; and also they set food before them.

Having done this in the various suburbs, they went to the pyramid of the goddess whom they called Chicome coatl, and there, before her, they enacted skirmishes in the manner of battles. And all the girls bore upon their backs ears of maize [grown] the year before. They went in procession, to present them to the goddess Chicome coatl, and they returned them once more to their house[s] as blessed thing[s]; and from them they took the seed to plant next year. And also they put it [away] as the heart of the grain bins, because it was blessed.

They made of dough (which they call *tzoalli*) the image of this goddess in the courtyard of her pyramid; and before her they offered all kinds of maize, and all kinds of beans, and all kinds of *chía*. For they said that she was the maker and giver of all those things which are the necessities of life, that the people may live.

Al quarto mes llamauan, Vey toçoztli: en el primero dia deste mes: haziã fiesta a honrra del dios llamado Cinteutl, que le tenjan por dios de los mahizes: a honrra deste, ayunauan quatro dias, ante de llegar la fiesta.

1. Marginal notation: *Sanctorum soteris et baii pontif.*

According to the accounts of some, they assembled the children whom they slew in the first month, buying them from their mothers. And they went on killing them in all the feasts which followed, until the rains really began. And thus they slew some in the first month, named Quauitl eua; and some in the second, named Tlacaxipeualiztli; and some in the third, named Toçoztontli; and others in the fourth, named Uei toçoztli: so that until the rains began in abundance, in all the feasts they sacrificed children. Many other ceremonies were performed in this feast. Etc.

Segun relacion de algunos, los niños que matauan, juntauanlos en el primero mes, comprandolos, a sus madres: y yuanlos matando, en todas las fiestas, sigujentes, hasta que las aguas començavan de veras: y ansi matauan algunos, en el primero mes llamado quaujtl coa: y otros en el segundo, llamado tlacaxipeualiztli: y otros en el tercero llamado toçoztontli; y otros en el quarto llamado vey toçoztli: De manera que hasta que començauan las aguas abundantamente, en todas las fiestas sacrificauan niños. Otras muchas cerjmonjas, se hazian en esta fiesta. Etc.

The fifth month they called Toxcatl. On the first day of this month they celebrated a great feast in honor of the god named Titlacauan, and for another name, Tezcatlipoca. This one they held to be god of the gods. In his honor, they slew, in this feast, a chosen youth who might have no blemishes upon his body, [who was] reared in all luxuries for the space of a year, [and] trained in the playing [of musical instruments], and in singing, and in speaking.

Chapter 5 Toxcatl

This feast was the most important of all the feasts. It was like Easter, and fell near Easter Sunday—a few days after. This youth, reared as hath been said, was very comely, and chosen from many. He had long hair—down to the waist.

When, on this feast, they slew the young man who had been reared for [the rôle], they at once produced another, who was to die after one year. He walked everywhere in the town finely arrayed with flowers in his hand, and with people who accompanied him. He greeted with good grace those whom he met. All knew that this one was the likeness of Tezcatlipoca, and they bowed before him and worshiped him whenever they met him.

Twenty days before this feast came, they gave this young man four comely young women reared for [the part], with whom for all the twenty days, he had carnal relations. And they changed his array when they gave him these young women: [they] clipped his hair like a war captain and gave him more finery [even] braver [than what he had had].

Five days before he was to die, they celebrated feasts for him and banquets, in cool and pleasant places. Many of the leading men accompanied him. On the arrival of the day he was to die, they took him to a pyramid or sanctuary which they called

Al quinto mes llamauan Toxcatl: el primero dia deste mes: hazian gran fiesta a honrra del dios llamado Titlacaoa, y por otro nombre Tezcatlibuca: a este tenjan por dios de los dioses: a su honrra matauan en esta fiesta vn mancebo escogido, q̃ ninguna tacha tuujesse en su cuerpo: criado en todos deleytes, por espacio de vn año, instruto en tañer, y en cantar, y en hablar.

Tlacohtcalco; and, before he arrived there, at a place which they called Tlapitzauayan, the women withdrew and left him. Arrived at the place where they were to kill him, he ascended the steps himself; on each of them he shattered one of the flutes which he had played as he walked, all during the year. When he had reached the summit [of the pyramid], they threw him upon the sacrificial stone; they tore out his heart; they brought down the body, carrying it in their hands; below, they cut the head off and ran through it [the crosspiece of the skull rack] which is called *tzompantli*. Many other ceremonies were enacted in this feast, which are set forth at length in their account, *fol.* 53.

llamauã tlapitzaoaiã, apartauãse las mugeres y dexauãle: llegãdo al lugar, donde le aujã de matar: el mjsmo se subia por las gradas, en cada vna dellas, hazia pedaços vna flauta de las cõ que andaua tañendo todo el año: llegado arriba, echauãle sobre el taxõ sacauanle el corcaço, tornauã a decendir el cuerpo abaxo en palmas, abaxo le cortauã la cabeça y la espetauã en vn palmo que se llama Tzompãtli: Otras muchas cerimonjas, se haziã en esta fiesta: las quales estan escriptas a la large en su historia. fo. 53.

The sixth month they called Etzalqualiztli. On the first day of this month they observed a feast to the rain gods. In honor of these gods, the priests of these gods fasted before their feast came for four days, which are the four last days of the previous month.

Chapter 6 Etzalqualiztli

In order to celebrate this feast, the priests and servants of the idols went to Citlaltepec for reeds; for they grew very large and handsome in the waters called Temilco. From there they brought them to Mexico to adorn the pyramids. On the road which they took, no one appeared; all wayfarers hid themselves, for fear of them. And if they came upon one, they took from him whatever he had, even leaving him naked. And if he resisted, they belabored him such that they left him for dead. And even if he bore tribute for Moctezuma, they took it from him. And for this they visited upon them no punishment; because, since they were servants of the idols, they had license to do these things, and others [even] worse, with no punishment. Many other ceremonies the priests of the temple performed in these four days, which are put forth at length in the account of the feast.

On the arrival of the feast of Etzalqualiztli, everyone made a kind of gruel or porridge which is called *etzalli* (a delicious food, which they liked well). All ate in their houses, and gave [of it] to those who came, and did a thousand follies on this day.

On this same feast, they punished terribly servants of the idols guilty of committing some fault in their service; [they mishandled] them in the water of the lagoon to such a point that they left them for dead. And thus they left them there at the edge of the water. From there their parents or relatives took them and carried them to their houses, half dead.

On this same feast they slew many captives and

Al sexto mes llamauan Etzalqualiztli: en el primero dia deste mes: hazian fiesta a los dioses de la pluujá: a honrra destos dioses, ayunauā los sacerdotes destos dioses: quatro dias antes de llegar a su fiesta, que son los quatro postreros dias del mes pasado.

los satrapas del templo en estos quatro dias que estan a la larga puestas en la historia desta fiesta.

Allegada la fiesta de Etzalqualiztli: todos haziā vna manera de puchas o poleadas que se llama Etzalli (comjda delicada a su gusto) todos comjan en su casa, y dauan a los que venjan, y hazian mjll locuras en este dia.

En esta mesma fiesta, a los mñjstros de los ydolos que avian hecho algun defecto en el serujcio dellos: castigauanlos terriblemēte en el agua de la laguna tātō que los dexauā por muertos: y assi los dexauā alli a la orilla del agua: de alli los tomauā sus padres o parientes, y los lleuauā a sus casas medio muertos.

En este mjsmo mes matauā muchos catiuos y otros

1. Marginal notation: *Junjus hz dies xxx.*

other slaves, arrayed in the ornaments of these gods named Tlalocs, in whose honor they slew them on their own pyramid. The hearts of those whom they killed they went to cast into the whirlpool or drain of the Lake of Mexico, which at that time was clearly to be seen. Many other ceremonies were performed. Etc.

esclavos, compuestos con los ornamentos destes dioses llamados tlaloques: por cuya honrra, los matauan en su mjsmo cu, los coraçones destes que matauã yvanlos a echar en el remolino a sumjdero de la laguna de Mexico, que entonces se via claramente. Otras muchas cerimonjas se hazian. Etc.

The seventh month they named Tecuilhuitontli. On the first day of this month they celebrated a feast to the goddess of salt, whom they called Uixtociuatl. They said that she was elder sister of the Tlaloc gods. In honor of this goddess they slew a woman decked in the ornaments with which they represented the same goddess.

Chapter 7 Tecuilhuitontli

On the eve of this feast, all the old women sang and danced, as well as the young women and girls. They went held by some short cords which they carried in their hands, one [taking] one end, another the other [end]. These cords they named *xochimecatl*. They all wore garlands of wormwood [flowers] of this land, which are called *iztauhiatl*. A number of old men led them and ordered the singing. Among them went the woman who was the likeness of this goddess and who was to die arrayed in rich ornaments.

On the night before the feast, the women, with the same one who was to die, kept vigil; and they sang and danced all night long. At break of day, all the priests arrayed themselves and performed a very solemn dance. And all who were present at the dance held in their hands those flowers which are called *cempoalxochitl*. Thus dancing, they took many captives to the Pyramid of Tlaloc, and, with them, the woman who was to die, who was the likeness of the goddess Uixtociuatl. There they slew first the captives and then her.

Many other ceremonies were performed during this feast; and also [there was] great drunkenness, all of which is set forth at length in the account of this feast, *fol.* 76.

Al septimo mes llamauan Tecujlhujtontli: En el primero dia deste mes: hazian fiesta a la diosa de la sal que llamauan Vixtocioatl: deziã que era hermana mayor, de los dioses tlaloques: matauan a honrra desta diosa vna muger compuesta con los ornamētos que pintauā a la mjsma diosa.

The eighth month they called Uei tecuilhuitl. On the first day of this month they observed a feast to the goddess named Xilonen (goddess of the tender maize). On this feast they gave food to all the poor men and women—old men, old women, boys, girls—in honor of the goddess. They slew a woman, on the tenth day of this month, arrayed in the ornaments with which they represented the same goddess.

Chapter 8 Uei tecuilhuitl

For eight uninterrupted days before the feast, they fed men and women, young and old. Then, very early in the morning they gave them to drink a kind of gruel which they call *chienpinolli*. Each one drank as much as he wished. And at noon they placed all in order, seated in their rows, and they gave them tamales. He who gave them [out], gave each one as many as he could hold in one hand. And if one of them exceeded the bounds of custom so much as to take [tamales] twice, they mishandled him and took from him those which he had, and he went with nothing. This [feasting] the lords brought about in order to give comfort to the poor; for at this time, ordinarily, there is a want of the necessities of life.

All these eight days they danced and moved in rhythm, men and women together performing the ceremonious movement, all heavily adorned with rich vestments and jewels. The women wore their hair unbound; they went with hair down, dancing and singing with the men. This dance began at sundown, and they continued in it until nine o'clock. They carried many lights (like great torches) of resinous wood, and there were many braziers or bonfires which burned in the same courtyard in which they danced. In this dance or solemn movement they went with hands joined [to those of other dancers], or embraced—the arm of one grasping the body of another as in an embrace, and the other likewise [holding still] another, men and women [alike].

mugeres todos juntos todos muy ataujados con ricas vestiduras y joyas: las mugeres trayan los cabellos sueltos, andauan en cabello baylando y cantando cō los hombres començaua este areyto en ponjendose el sol, y perseuerauan en el, hasta ora de las nueue: trayā muchas lumbreras (como grādes hachas) de tea, y aujan muchos braseros o hogueras, que ardan en el mjsmo patio dōde baylauan. En este bayle o areyto andauā trauados de las manos, o abraçados, el braço del vno asido del cuerpo como abraçado, y el otro asimjsmo del otro hombres y mugeres.					

One day before they slew the woman who was to die in honor of the goddess Xilonen, the women who served on the pyramid (who were called *ciuatlamacazque*) performed a dance in the courtyard of this same pyramid, and sang the [hymns of] praise and the canticles of this goddess. They all went surrounding her who was to die [and] who went bedight in the ornaments of this goddess. In this way, singing and dancing, they kept watch all night before the day when she was to die.

And at dawn all the nobles and warriors performed a dance in this same courtyard, and with them also danced the woman who was to die, with many other women arrayed like her. The men went dancing in front, by themselves, and the women went behind them.

As soon as all, thus dancing, arrived at the pyramid where that woman was to die, they made her go above, up the steps. When she reached the top, one [of the priests] took her upon his back, shoulder against shoulder; and in this position, they struck off her head and then tore out her heart and offered it to the sun. Many other ceremonies were enacted in this feast. Etc.

Vn dia antes que matassen a la muger que auja de morir: a honrra de la diosa xilonē: las mugeres que serujā en el cu (que se llamauā cioatlamacazque) haziā areyto en el patio del mjsmo cu, y cantauan los loores y cantares desta diosa, yvan todas rodeadas de la que avia de morir, que yva compuesta con los ornamētos desta diosa. Desta manera cantando y baylando: velauan toda la noche precediēte el dia en que avia de morir.

Y en amaneciendo todos los nobles y hōbres de guerra: hazian areyto en el mjsmo patio, y con ellos baylaua tambiē la muger que auja de morir, con otras muchas mugeres adereçadas como ella: los hombres yvan por si baylādo delante y las mugeres yvan tras ellos.

Desque todos assi baylando: llegauā al cu donde auja de morir aquella muger, subiāla por las gradas arriba: llegada arriba tomauāla vno a cuestras espaldas cō espaldas: y estādo assi, la cortauan la cabeça y luego la sacauā el coraçon y le ofreciā al sol: Otras muchas cerimonjas se haziā en esta fiesta. Etc.

The ninth month they called Tlaxochimaco. On the first day of this month they held a feast in honor of the god of war, named Uitzilopochtli. In this they offered him the first flowers [grown] in that year.

Chapter 9 Tlaxochimaco

On the night before this feast, all busied themselves in killing fowls and dogs, in order to eat them, and in making tamales and other things concerned with food. Then, very early in the morning of this feast, the priests of the idols decked Uitzilopochtli with many flowers; and after the statue of this god was adorned, they decorated the statues of the other gods with garlands and strings and wreaths of flowers. And then they decked all the other statues in the *calpulos* and young men's houses. And in the houses of the majordomos and leading men and common folk, all decorated with flowers the statues which they had in their houses.

Having decorated the statues of all the gods, they then began to eat that fare which they had prepared the night before; and, a little after eating, they started a kind of dance in which the noblemen, with women, together danced grasping each other's hands, and the ones embracing the others, arms thrown about each other's necks. They did not dance solemnly in the manner of a ceremonial dance, nor did they go through the movements of a ceremonial dance; but they went step by step, to the rhythm of those who beat [the drums] and sang, all of whom were standing, a little to one side of those who danced, near a circular altar which they called *momoztli*.

This chanting lasted until nightfall. Not only in the pyramid courtyards but in all the houses of the leading men and the common folk they beat [the drums] and sang with a great din until night. And the old men and the old women drank wine; but no young man nor young woman drank it. And if [any] of them did drink it, they punished them sorely. Many other ceremonies were performed in this, which are [described] at length. Etc.

Al nono mes llamauan Tlaxochimaco: El primero dia deste mes hazian fiesta a honrra del dios de la guerra llamado Vitzilobuchtli: ofrecianle en ella las primeras flores de aquel año.

Duraua este cantar hasta la noche: no solo en los patios de los cues: pero en todas las casas de principales y maceguals, tañjã y cantauan con gran bozeria hasta la noche: y los viejos y viejas beujan el vctli: pero njngun mancebo nj moça lo beuja: y si alguno lo beuja castigauanlos reziamente. Otras muchas ceremonjas se hazian en esta: que esta a la larga. Etc.

The tenth month they named Xocotl uetzi. On the first day of this month, they observed a feast to the god of fire, named Xiuh tecutli or Ixcoçauhqui. On this feast they cast into the fire, alive, many slaves, bound hand and foot, and before they had quite died, they took them forth, dragging [them] out of the fire, in order to tear out their hearts before the image of this god.

Chapter 10 Xocotl uetzi

During the feast of Tlaxochimaco, they went forth into the forest [and] cut a tree of twenty-five fathoms' height and brought it, dragging it, to the courtyard of this god. There they pruned off all its branches and raised it upright, and it remained thus standing until the eve of the feast. Then they again laid it upon the earth with much caution and [using] many devices that it might not bump [the ground]. On the day before this feast, early in the morning, many carpenters came with their tools, and they trimmed it and made it very smooth. After having trimmed it and decorated it with many kinds of papers, they tied ropes and other cords to it and raised it up with much shouting and din, and they made it firm.

As soon as the beam or tree was raised and adorned with all of its finery, then those who had slaves to cast alive into the flames adorned themselves with their plumage and rich ornaments, and they stained their bodies yellow, which was the livery of fire; and, taking their captives with them, they performed a dance all that day, until nightfall.

After the captives had kept vigil all that night on the pyramid, and after having performed many ceremonies with them, they cast into their faces some powder which they call *yiauh tli*, that they might lose their sense of feeling and not suffer so greatly [the

Al decimo mes llamauan Xocotl vetzi: En el primero dia deste mes, haziã fiesta al dios del fuego llamado xiuh tecutli o Jzcoçauhquj: en esta fiesta echauã en el fuego viuos muchos esclauos, atados de pies y manos, y antes que acabasen de morir, los sacauã arrastrando del fuego para sacar el coraçon delante la ymagen deste dios.

pains of] their death. They tied them hand and foot, and, thus bound, they slung them over their shoulders, and walked with them as if performing a dance about the edge of a great fire and tall mound of live coals. Thus proceeding, they went casting them upon the mound of coals—now one, and, after a little, another. And him whom they had cast they let burn for a good while; and, still alive and tossing, they took him forth, dragging him out with something like a hook, and cast him upon the sacrificial stone. And, having opened his breast, they tore out his heart. In this manner suffered all those unhappy captives.

The tree was made fast by many ropes from the top, as the rigging of a ship hangeth from the topsail. On the top of this stood upright the statue of that god, made of a dough which they call *tzoalli*. When the aforesaid sacrifice had been offered, all the young men assailed [the statue] with great vigor. Many other ceremonies were enacted, as hath been written at length below, in this feast.

los pies y las manos, y assi atados ponjãlos sobre los hombros, y andauã con ellos como haziẽdo areyto en rrededor de vn grã fuego y grã mōton de brasa, ansi andando yvãlos arrojando sobre el monton de brasas: agora vno y desde a vn poco otro: y el que avian arrojado, dexauanle quemar vn buen interualo, y avn quando biuo y barqueando sacauanle fuera arras-trando con qual que garauato, y echauãle sobre el taxõ: y abierto el pecho sacauanle el coraçon: desta manera padecian todos aquellos tristes catiuos.

Estaua el arbol atado con muchas sogas de lo alto, como la jarcia de la nao: esta pendiente de la gabia en lo alto del, estaua en pie la ymagen de aquel dios: hecha de masa que llaman tzoalli: acabado el sacri-ficio ya dicho, arremetian con gran impetu todos los mancebos. Otras muchas cerimonjas hazian segun a la larga esta escripto adelante en esta fiesta.

The eleventh month they named Ochpaniztli. On the first day of this month they celebrated a feast to the mother of the gods, named Teteo innan, or Toçi, which meaneth "Our Grandmother." They danced in silence for the honor of this goddess, and in great silence slew a woman dressed with the ornaments with which they represented this goddess.

Chapter 11 Ochpaniztli

Five days before this month began, all the feasts and merry making of the previous month ceased. Entering this month, they danced eight days without singing and without beating the two-toned drum. These past, there came forth the woman who was the likeness of the goddess whom they name Teteo innan, arrayed with the ornaments with which they pictured the same goddess; and a great number of women came forth with her, especially the medicine women and midwives. And they split into two bands and fought, pelting each other with balls made of tree parasites and from the leaves of the *tuna* cactus and with balls made from the leaves of reeds, and with flowers which they call *cempoalxochitl*. This merry making lasted four days.

These ceremonies and others of like kind ended, they brought it about that that woman should not know she was to die, so that she should neither weep nor be saddened; for they held that to be an omen of evil. The night when she was to die having fallen, they decked her very richly, and persuaded her that they were taking her so that some great lord might sleep with her; and they bore her in great silence to the pyramid where she was to die. Having taken her up, one [of the priests] took her upon his back, shoulder against shoulder, and swiftly they struck off her head, and then they flayed her. And a stout youth put on her skin.

This one who wore the skin of the woman whom they had slain they then bore off with great solem-

Al vndecimo mes llamauan Ochpanjztli: El primero dia, deste mes, haziã fiesta a la madre de los dioses llamada Teteu inna o Toci, que qujere dezir nuestra abuela: baylauan a honrra desta diosa en silencio y matauan vna muger en gran silencio vestida con los ornamentos que pintauan a esta diosa.

nity, and, escorted by many captives to the pyramid of Uitzilopochtli, here this same one, before Uitzilopochtli, tore out the hearts of four captives. The rest he left, that the priest might slay them.

In this month the lord drew up a parade of all the warriors and of the young men who had never gone to war. These he gave arms and insignia, and they became soldiers; so that from then on they could go to war. Many other ceremonies were enacted in this feast, which are set forth at length in its account.

dole de muchos catiuos al cu de Vitzilobuchtli: alli este mesmo delante de Vitzilobuchtli, sacaua el coraçon a quatro catiuos: y los de mas dexaualos para que los matasse el satrapa.

En este mes hazia alarde el señor de toda la gente de guerra: y de los mancebos que nūca aujan ydo a la guerra: a estos daua armas y diujsas, y asentauan por soldados: para que de alli adelante fuessen a la guerra. Otras muchas cerimonjas se hazian en esta fiesta que estan a la larga puestas en su historia.

The twelfth month they named Teotl eco, which meaneth "The Arrival of the Gods." They celebrated this feast in honor of all the gods; for they said that they had gone to a number of places. They observed a great feast on the last day of this month because their gods had arrived.

Chapter 12 Teotl eco

On the fifteenth day of this month the young men and boys strewed boughs on all the altars and shrines of the gods, both those which were in the houses and those which were along the roads and crossroads. And for this activity which they performed they gave them maize; [to some they] gave a large basket full of maize, and to others two or three ears.

On the eighteenth day arrived the god (who is always a young man whom they called Tlamatzincatl; that is, Titlacauan). They said that, because he was young and strong, he traveled better and arrived first. They then set forth food on his pyramid, and that night they ate and drank, and all made merry, especially the old men and the old women, who drank wine because of the arrival of the god. And they said that with this rejoicing they washed his feet for him.

On the last day of this month was the great feast; for they said that all the gods then arrived. On the eve of this day, at night, they made, on a mat, a very closely packed small cake of cornmeal, in the shape of a cheese. Upon this small cake the gods impressed the print of a foot as a sign that they had come. All night long the principal priest watched, and came and went many times to see when he would descry the print.

Seeing the mark of a footprint, the priest then cried out, saying "Our lord hath come!" Then the priests of the pyramid began to sound horns, and conch shells, and trumpets, and other instruments of those

Al dozeno mes llamauan Teutl eco, que qujere dezir la llegada le los dioses celebrauan esta fiesta, a honrra de todos los dioses, porque dezian que aujan ydo a algunas partes, hazian gran fiesta el postrero dia deste mes, porque sus dioses aujan llegado.

El postrero dia deste mes era la gran fiesta: porque dizen que todos los dioses llegauan entonce: la vigilia deste dia, a la noche hazian encima de vn petate de harina de mahiz vn mōtonzillo muy tupido de la forma de vn queso: en este montonzillo imprimjan los dioses la pisada de vn pie en señal que avian llegado: toda la noche el principal satrapa velaua y yva y venja muchas vezes a mjrar quando veria la pisada.

En vinjendo el satrapa la señal de la pisada luego daua bozes diziendo, llegado a nuestro señor: luego comenzauan los mñjstros del cu, a tañer cornetas, y caracoles, y trompetas y otros instrumentos de los

1. Marginal notation: *Dedicatio sancti Michael*.

which they then used. As soon as the instruments were heard, all the people hastened to offer food at all the pyramids and shrines. Again there was merry making, washing the feet of their gods, as is told above.

On the next day they said that the old gods arrived, after all [the rest]—because they moved more slowly, being old. On this day they had many captives to burn alive; and, a great mound of coals having been piled up, certain young men went dancing about the edge of the fire, disguised as monsters. And, thus dancing, they proceeded casting into the fire these miserable captives in the manner which is told above. Many other ceremonies were performed, as will be related below in this feast.

que ellos entonce vsauã: luego que se oyan los instrumentos, acudia toda la gente a ofrecer comjda en todos los cues, y oratorios: otra vez se regozijauã lauando los pies de sus dioses, como arriba esta dicho.

El dia sigujente: dezian que llegauã los dioses viejos a la postre de todos: porque andauan menos por ser viejos. Este dia tenjã muchos catiuos para quemar biuos: y hecho grã monton de brasa, andauan baylando al rededor del fuego ciertos mancebos, disfrazados como monstros, y ansi baylando, yvan arrojando en el fuego estos tristes captiuos, de la manera que arriba esta dicho. Otras muchas ceremonjas se hazian segũ se dira adelante en esta fiesta.

The thirteenth month they named Tepeilhuitl. In this month they celebrated a feast in honor of the high mountains, which are in all these lands of this New Spain, where large clouds pile up. They made the images of each one of them in human form, from the dough which is called *tzoalli*, and they laid offerings before these images in veneration of these same mountains.

Chapter 13 Tepeilhuitl

In honor of the mountains they made a number of serpents, of wood or of the roots of trees, and they fashioned them heads like [those of] serpents. They made also some lengths of wood, as thick as the wrist, and long. They called them *ecatontoti*. These, as well as the serpents, they overlaid with that dough which they call *tzoalli*. These pieces they provided a covering in the manner of mountains. Above, they placed the head, like the head of a person. Likewise they made these images in memory of those who had drowned in the water, or had died such a death that they did not burn them, but rather buried them.

After, with many ceremonies, they had placed upon their altars the aforementioned images, they also offered them tamales and other food; and also they uttered canticles of their praises, and they drank wine in their honor.

Upon arrival of the feast in honor of the mountains, they slew four women and one man. The first of these [women] they called Tepexoch. The second they called Matlalcueie. The third they named Xochtecatl. The fourth they called Mayauel. And the man they named Milnauatl. They decked these women and the man in many papers covered with rubber. And they carried them in some litters upon the shoulders of women highly adorned, to the place where they were to slay them.

Al tercio decimo mes llamauan Tepeilhujtl: En este mes hazian fiesta a honrra de lo montes emjnētes, que estan por todas estas comarcas desta nueua españa: donde se armã ñublados: hazian las ymagenes en figura humana a cada vno dellos de la masa que se llama tzoal, y ofrecian delante destas ymagenes, en respecto destos mismos montes.

Llegada la fiesta a honrra de los montes, matauan quatro mugeres y vn hombre: la vna dellas llamauã tepexoch: la segūda llamauã Matlalcueie: la tercera llamauan Sochtecatl: la quarta llamauã Mayauel, y al hombre llamauã Milnaoatl: adereçauan a estas mugeres y al hombre cõ muchos papeles llenos de vlli: y lleuauanlas en vnas literas en hombros de mugeres muy ataujadas, hasta donde las aujã de matar.

1. Marginal notation: *October hz dies xxxj.*

After they had slain them and torn out their hearts, they took them away gently, rolling them down the steps. When they had reached the bottom, they cut off their heads and inserted a rod through them, and they carried the bodies to the houses which they called *calpulco*, where they divided them up in order to eat them. The papers with which they arrayed the images of the mountains, after they had broken them to pieces in order to eat them, they hung in the *calpulco*. Many other ceremonies were performed in this feast, which are set down at length in its account.

Despues que las oujeron muerto, y sacados los coraçones: lleuauanlas pasito rodando por las gradas abaxo: llegadas abaxo cortauanlas las cabeças, y espetauanlas en vn palo, y los cuerpos lleuauanlos a las casas que llamauan Calpul: donde los repartian para comer: los papeles con que adereçauan las ymagenes de los montes despues de averlas desbaratado para comer, colgauanlos en el Calpul. Otras muchas cerimonjas se hazian en esta fiesta, que estan a la larga puestas en su historia.

The fourteenth month they named Quecholli. They observed a feast to the god name Mixcoatl. And in this month they made arrows and darts for war. They slew many slaves in honor of this god.

Chapter 14 Quecholli

When they made the arrows, for a space of five days all took blood from the ears, and [with] the blood which they pressed out of them they anointed their own temples. They said that they did penances in order to go to hunt deer. From those who did not bleed themselves, they took their capes as punishment. No man lay with his wife on those days; neither did the old men nor the old women drink wine; because they did penance.

At the end of the four days during which they made the arrows and darts, they made a number of very small arrows, and bound them in four's with each [bundle of] four torches. And, a small bundle of the four torches and the four arrows being made, they offered them upon the graves of the dead. They placed also, along with the arrows and torches, two tamales. All this remained for a whole day upon the grave, and at night they burned it and performed many other ceremonies for the dead on this same feast.

On the tenth day of this month, all the Mexicans and Tlatelulcans went to those mountains which they call Çacatepec. And they say that this mountain is their mother. On the day that they arrived, they made huts or cabins of grass, and they lit fires, and nothing else did they do that day.

Next day, at dawn, all forthwith broke fast and set out for the country and formed a great wing, wherewith they surrounded many animals—deer, rabbit, and other animals—and little by little they kept coming together until they rounded up all of them. Then they attacked and hunted, each one what he could.

Al quarto decimo mes llamauan Quecholli: hazian fiesta al dios llamado Miscoatl: y en este mes hazian saetas y dardos para la guerra: matauã a honrra deste dios muchos esclauos.

A los diez dias deste mes yvan todos los Mexicanos y Tlatelulcanos a aquellos montes que llaman Çacatepec: y dizen que es su madre aquel monte, el dia que llegauan hazian xacales o cabañas de heno, y hazian fuegos y njnguna otra cosa hazian aquel dia.

Otro dia en amaneciendo luego almorçauan todos, y salian al campo y hazian vna ala grande: donde cercauan muchos anjmales, ciervos, conejos, y otros anjmales y poco a poco se yvan juntando hasta acorralarlos todos: entonce arremetian y caçauan cada a qual lo que podia.

1. Marginal notation: *November hz dies xxx.*

The hunt ended, they slew captives and slaves on a pyramid which they call Tlamatzinco. They bound them hand and foot, and carried them up the steps of the pyramid (as one carrieth a deer by the hind and forelegs to slaughter). They slew with great ceremony the man and the woman who were the likeness[es] of the god Mixcoatl and of his consort. They slew them on another pyramid which was called Mixcoateopan. Many other ceremonies [were performed]. Etc.

Acabada la caça: matauan captiuos y esclauos en vn cu, que llaman tlamatzinco ataualos de pies y manos, y lleuauãlos por las gradas del cu arriba (como qujen lleua vn cieruo por los pies y por las manos a matar) matauanlos con gran cerimonia: al hombre y a la muger que erã ymagẽ del dios Mixcoatl y de su muger matauãlos en otro cu, que se llama Miscoateupan. Otras muchas ceremonias. Etc.

The fifteenth month they named Panquetzalitzli. In this month they celebrated a feast to the god of war, Uitzilopochtli. Before this feast, the priests of the idols fasted for forty days and performed other severe penances, like going naked at midnight to carry branches to the mountains. Etc.

Chapter 15 Panquetzalitzli

On the second day of this month all began to perform a dance and to sing the canticles of Uitzilopochtli in the the courtyard of his pyramid. Men and women danced, all together. They began these canticles in the afternoon, and they ended at nearly ten o'clock. These dances and songs lasted twenty days.

On the ninth day of this month, they adorned, with great ceremonies, those whom they were to slay. They painted them in various colors; they decked them in many papers. Finally they performed a dance with them, in which went a woman paired with a man, singing and dancing.

On the sixteenth day of this month, the owners of the slaves began a fast; and on the nineteenth day, they began to perform a number of dances in which all, men and women, went grasping hands, and they danced winding back and forth in the courtyard of the aforementioned pyramid. A number of old men sang, and played [instruments] while the others danced.

After those who were to die had performed many ceremonies, there came down from the pyramid of Uitzilopochtli one attired in the ornaments of the god Paynal, and he slew four of those slaves in the ball court which was found in the courtyard which they called Teotlachtli. From there he departed and circled all the city, running; and in certain places he slew, in each one, a slave. And from that point [onward], two factions began a mock battle. Some died in the skirmishing.

Al quinzeno mes llamauan Panquetzalitzli: En este mes haziã fiesta al dios de la guerra Vitzilobuchtli: antes desta fiesta los satrapas de los ydolos ayunauan quarenta dias y hazian otras penjtencias asperas como era yr a la media noche desnudos a llevar ramos a los montes. Etc.

Despues de auer hecho muchas cerimonjas los que avian de morir decendian del cu de Vitzilobuchtli, vno vestido con los ornamẽtos del dios Paynal, y mataua quatro de aquellos esclauos en el juego de pelota que estaua en el patio que llamauã teutlachtli: de alli yva y cercaua toda la ciudad corriendo, y en ciertas partes mataua en cada vno vn esclauo: y de alli començauan a escaramuçar dos parcialidades, murian algunos en la escaramuça.

1. Marginal notation: *Dedicatio Basilice saluat.*

After many ceremonies, at last they slew captives on the Pyramid of Uitzilopochtli, and also many slaves. And, having slain one, they sounded musical instruments. And on finishing [with one], they seized another, to slay him. And, on killing him, they again sounded [musical instruments]. Thus they did to each one until finishing them [all]. On ceasing to slay these unhappy ones, they started to dance and to sing, to eat and to drink, and thus the feast ended.

Despues de muchas cerimonjas: finalmente matauan captiuos, en el cu, de Vitzilobuchtli, y tambien muchos esclauos y en matando a vno tocauan los instrumētos musicales, y en cessando tomauan otro para matarle, y en matandole tocauā otravez; ansi hazian a cada vno, hasta acabarlos: acabando de matar estos tristes, començauan a baylar, y a cantar, a comer y a beuer, y ansi se acabaua la fiesta.

The sixteenth month they named Atemoztli. In this month they celebrated a feast to the rain gods, because for the most part in this month it began to thunder and to threaten rain; and the priests of the Tlalocs began to do penances and to offer sacrifices, so that the rains would come.

Chapter 16 Atemoztli

When it began to thunder, the priests of the Tlalocs, with great industriousness, offered *copal* and other fragrances to their gods and to all the statues of these. They said that then they came to give rain. And the common folk made vows to fashion the images of the mountains, which are called *tepicitli*, because they are dedicated [to] those gods of the rain. And on the sixteenth day of this month, all the common folk prepared offerings to offer before Tlaloc. And [during] these four days they performed penances, and the men abstained from women, and the women from men.

Having come to [the time of] the feast, which they celebrated on the last day of this month, they cut lengths of paper, and they bound them to a number of poles, from bottom to top. And they set them up in the courtyards of their houses and made the images of the mountains of *tzoalli*. They fashioned for them their teeth of squash seeds, and their eyes of some beans which are named *aiecotli*. And then they offered them their offerings of food, and they worshipped them.

After having kept a vigil for them, and beaten drums and sung for them, they opened their breasts with a *tzotzopaztli*, which is an instrument with which the women weave, almost like a *machete*; and they took out their hearts and struck off their heads. And later they divided up all the body among themselves and ate it; and the ornaments with which

Al mes decimo sexto llamauan Atemuztli: En este mes hazian fiesta a los Dioses de la pluujá: porque por la mayor parte en este mes, començaua a tronar y hazer demuestras de agua: y los satrapas de los Tlaloques començauan a hazer penjtencias y sacrificios porque venjesse el agua.

they had arrayed them, they burned in the courtyards of their houses.

This done, they carried all these ashes and the ornaments with which they had provided them to the shrines which they call *aiauhcalco*. And then they began to eat and drink, and to make merry. And thus ended the feast. Many other ceremonies remain to be related, which are [set down] at length in the account of this feast.

comjanselo, y otros ornamētos con que los tenjan aparejados quemauanlos en los patios de sus casas.

Hecho esto: lleuauan todas esta cenjzas, y los aparejos con que aujan serujdo a los oratorios que llamã Aiauhcalco: y luego començauan a comer y a beuer, y a regozijarse. Y ansi concluyan la fiesta. Otras muchas cerimonjas se quedan por dezir que estan a la larga en la historia desta fiesta.

The seventeenth month they called Tititl. In this month they celebrated a feast to a goddess whom they named Ilamatecutli, and by another name, Tonan, and by [still] another name, Cozcamiauh. In honor of this goddess they slew a woman, and as soon as they had torn out her heart they struck off her head and performed a dance with it. He who went before carried the head by the hair, in his right hand, making [with it] the gestures of the dance.

Chapter 17 Tititl

This woman whom they slew in this feast they arrayed in the adornments of that goddess whose likeness [she was], called Ilamatecutli, and by another name, Tonan, which meaneth "Our Mother." This woman, thus bedight with the adornments [which are] set forth in the description, danced alone. A number of old men made music for her; and, dancing, she sighed and wept, mindful that soon she was to die. After midday, the priests arrayed themselves in the ornaments of all the gods, and went before her, and took her up to the pyramid where she was to die. Having stretched her out upon the sacrificial stone, they tore out her heart, and they struck off her head. Then one of those who went adorned as a god took [it], and, [with him] foremost, carrying it by the hair, they performed a dance with it. He who bore it in his right hand guided [them], and he made the dance gestures with it.

On the same day that the servants of the idols slew this woman, they performed certain mock-battles, and made merry, running—some behind the others—up and down the pyramid, enacting certain ceremonies.

On the next day, all the common folk made a number of sacks, like pockets, with some cords attached, as much as a fathom long. They filled those

Al mes decimo septimo llamauan Tititl. En este mes haziã fiesta a vna diosa que llamauã Ilamatecutli, y por otro nombre Tona, y por otro nombre cozcamjauh, a honrra desta diosa: matauan vna muger, y desde le aviã sacado el coraçon cortauanle la cabeça y hazian areyto con ella, el que yva adelante lleuaua la cabeça por los cabellos en la mano derecha, haziendo sus ademanes de bayle.

bellos: hazian areyto cõ ella gujaua el que la lleuaua en la mano derecha y hazia sus ademanes de bayle con ella.

El mesmo dia que matauã esta muger los mñjstros de los ydolos, haziã ciertas escaramuças y regozijos: corriendo vnos tras otros el cu, arriba y el cu abaxo haziendo ciertas cerimonjas.

El dia sigujente todos los populares hazian vnas talegas como bolsas, con vnos cordeles atadas tan largos como vn braço: hinchian aquellas talegas de

1. Marginal notation: *Januarius bz dies xxxj.*

2. Marginal notation: *Epiphanjs domjñj.*

sacks with soft things, like wool, and they carried them hidden under their capes, and they struck, with the bags, all the women whom they might meet in the streets. This game reached such lengths that the boys also made bags and with them mauled the girls so much that they made them weep. Many other ceremonies were performed in this celebration, which are set forth at length in the account of this feast.

cosas blandas como lana y llegauanlas ascondidas debaxo de las mantas, y a todas las mugeres que topauan por la calle, dauanlas de talegazos: llegaua a tanto este juego, que tambiẽ los muchachos hazian las talegas y aporreauan con ellas a las muchachas tãto que las hazian llorar. Otras muchas cerimonjas se hazian esta fiesta q̃ estan a la larga puestas en la historia desta fiesta.

The eighteenth month they named Izcalli. In this month they celebrated a feast to the god of fire, whom they called Xiuhtecutli, or Ixcoçauhqui. They made an image in his honor, with great artifice, which appeared to throw off flames of its own accord. And every four years, in this same feast, they slew slaves and captives in honor of this god. And they pierced the ears of all the children who had been born in those years, and they gave them godfathers and godmothers.

Chapter 18 Izcalli

On the tenth day of this month they made a new fire at midnight, before the image of Xiuhtecutli, [which was] very curiously adorned. And, the fire having been lit, then, in the morning, the young men and boys came, and they brought various animals which they had hunted in the ten preceding days—some water [animals] and some land [animals]. And they offered them to the old men who were charged with safeguarding this god. And these cast into the fire all of those animals, so that they would cook. And they gave each one of these young men and boys a tamal made with amaranth, which they called *uauhquiltamalli*, which everyone in the city offered upon that day. All ate of these in honor of the feast day. They ate them very hot, and they drank and made merry.

On this feast, in ordinary years, they slew no one. But in the bissextile year, which was every four years, they slew, during this feast, captives and slaves and the impersonator of Xiuhtecutli, decorated in the manner which hath been told above, with many precious and curious adornments; they performed many great ceremonies upon the death of these [victims]—many more than on the other feasts already described. This is set forth at length in the account of this feast.

After they had slain these slaves and captives and the impersonator of Ixcoçauhqui, who is the god of fire, all the leading men and lords, the illustrious, and

Al mes decimo octauo llamauan Izcalli: en este mes hazian fiesta al dios del fuego que llamauan Xiuhtecutli, o Ixcoçauhquj: hazian vna ymagen a su hōrra de grã artificio que parecia que echaua llamas de fuego de si: y de quatro en quatro años en esta mesma fiesta esclauos y captiuos matauan a honrra deste dios: y agujerauan las orejas a todos los njños que aujan nacido en aquellos años y dauanlos padrinos, y madrinas.

En esta fiesta los años comunes no matauā a nadie: pero el año del bisexto que era de quatro en quatro años: matauan en esta fiesta captiuos y esclauos, y la ymagen de Xiuhtecutli, compuesta de la manera que arriba se dixo cō muchos y preciosos y curiosos ataujos: hazian grandes y muchas cerimonjas en la muerte destos, muchas mas que en las otras fiestas ya dichas. Esto esta puesto a la larga en la historia desta fiesta.

Despues que aujan muerto a estos esclauos y captiuos, y a la ymagen de Jsoçauhquj que es el dios del fuego: estauan aparejados y adereçados muy rica-

the emperor himself were decked and arrayed very richly in costly adornments, and they began a dance of great solemnity and gravity which they called *netecujtotiliztli*, which meaneth "Dance of the Lords." This was performed only every four years, during this feast. On this same day, very early in the morning, before dawn, they began to pierce the ears of the boys and girls, and they applied to their heads a wig of parrot feathers, pasted on with *ocotzotl*, which is pine resin. Etc.

mente con ricos adereços todos los principales y señores y personas yllustres, y el mesmo Emperador: y començauan vn areyto de gran solemnidad y grauedad: al qual llamauan Netecujtotiliztli, qujere dezir: areyto de los señores: Este solamente se hazia de quatro en quatro años en esta fiesta. Este mesmo dia muy de mañana ante que amaneciesse començauã a agujerar las orejas a los njños y njñas: y echauãlos vn casquete en la cabeça de pluma de papagayos, pegado con ocutzotl que es resina de pino. Etc.

The five remaining days of the year, which are the four last of January and the first of February, they named Nemontemi, which meaneth barren days. And they regarded them as unlucky and of evil fortune. There is conjecture that when they pierced the boys' and girls' ears, which was every four years, they set aside six days of Nemontemi, and it is the same as the bissextile which we observe every four years.

Chapter 19

These five days they held as of evil fortune and unlucky. They said that those who were born in them had evil outcomes in all their affairs, and were poor and wretched. They named them Nemo. If they were men, they named them Nemoquich; if it was a woman, they named her Nenciuatl. They dared do nothing in these days, because they were unlucky. Especially did they abstain from quarreling, because they said that those who quarreled in these days always remained with that custom. They held as a bad omen stumbling in these days.

These aforementioned feasts were fixed, and were always observed within the month, or a day or two ahead. Other feasts they had [which were] movable, which were celebrated during the course of the twenty signs, which made a round in two hundred and sixty days. And hence these movable feasts, in a year, fell one in one month, and another in another, and always varied.

Of the Movable Feasts

The first movable feast was celebrated in honor of the sun, in the sign which is named ce ocelotl, in the fourth house, which is named naui olin. On this feast they offered, to the image of the sun, quail, and they offered incense. And at noon they slew captives before it in honor of the sun. On this same day, all drew blood from their ears—children and those who were grown—in honor of the sun, and they offered it that blood.

The Second Movable Feast

In this same sign, in the seventh house, all the painters and the seamstresses celebrated a feast. They

A los cinco días restantes del año que son los quatro vltimos de Enero y el primero de hebrero llamauan Nemontemi, que qujere dezir dias valdios: y tenjanlos por aziagos y de mala fortuna: ay conjetura que quando agujerauan las orejas a los njños y njñas que era de quatro en quatro años, echauan seys dias de Nenontemj y es lo mjsmo del bisexto que nosteros hazemos de quatro en quatro años.

Capi. 19.

1 A Estos cinco dias tenjan por malafor- A 28
2 b tunados y aziagos: dezian que los que b 29
3 c en ellos nacia tenjan malos successos c 30
4 d en todas sus cosas, y eran pobres y mj- d 31
seros llamauanlos Nemo, si eran hombres llamauanlos Nenoqujch, y si era muger llamauala Nencioatl, no osauan hazer nada en estos dias por ser malafortunados: especialmente se abstengan de reñjr: porque dezian que los que reñjan en estos dias se quedauā siempre con aquella costumbre tenjan por mal aguero tropeçar en estos dias.

Estas fiestas dichas eran fixas que siempre se haziā dentro del mes o vn dia o dos adelante: Otras fiestas tenjan moujbles que se hazian por el curso de los veinte signos: los quales hazian vn circulo en dozientos y sesenta dias: y por tanto estas fiestas moujbles vn año cayan en vn mes y otro en otro y siempre variauan.

De las fiestas moujbles.

La primera fiesta moujble se celebraua a honrra del sol en el signo que se llama ce ocelutl, en la quarta casa que se llama naolin: en esta fiesta ofrecian a la ymagen del sol codornjzes y incensauan: y en el medio matauā capituos delante della a honrra del sol. En este mesmo dia se sangrauan todos de las orejas chicos y grādes a hōrra del sol y le ofrecian aquella sangre.

La segunda fiesta moujble.

En este mjsmo signo en la septima casa haziā fiesta todos los pintores, y las labrāderas ayunauā quarēta

fasted, [some] for forty days, others for twenty, in order to prevail over chance, in order to paint well and to weave textiles well. For this purpose they offered quail and incense, and performed other ceremonies—the men to the god Chicome xochitl, and the women to the goddess Xochiquetzal.

The Third Movable Feast

In the third sign, which is called *ce maçatl*, in the first house, they celebrated a feast to the goddesses who are named Ciuapipilti, because they said that then they came down to the earth. They adorned their images with papers and offered them offerings.

The Fourth Movable Feast

In the sign which is called *ce maçatl*, in the second house, which is called *ome tochtli*, they celebrated a great feast to the god named Izquitecatl, who is the second god of wine; and not alone to him but to all the gods of wine, who were many. On this day they adorned his image very well on his pyramid, and offered him things to eat, and they sang and played [musical instruments] before him. And in the courtyard of his pyramid they set a large open jar of wine, and those who were wine merchants filled it to overflowing, and all who wished went to drink. They had some canes through which they drank. The wine sellers kept feeding the large jar, so that it was always full. Mostly, those who had newly cut the maguey did this. The first syrup which they took out they took to the house of this god as first fruits.

The Fifth Movable Feast

In the sign called *ce xochitl*, in the first house, they celebrated a great feast. The leading men and the lords danced and sang in honor of this sign, and they otherwise made merry. And then they brought forth the richest feathers, with which they adorned themselves for the dance. In this feast the lord gave gifts to the warriors and to the singers and to the palace folk.

The Sixth Movable Feast

In the sign named *ce acatl*, in the first house, the lords and the leading men celebrated a great festival to Quetzalcoatl, god of the winds. This feast they observed in the house called *calmecac*, which was the house where dwelt the priests of the idols, and where were trained the boys. In this house, which was like

días, otros veinte por alcançar ventura para pintar bien y para texer bien labores, ofrecían a este propósito codornices y encienso, y haziã otras cerimonjas los hombres al dios Chicome sochitl y las mugeres a la diosa Sochiquetzal.

La tercera fiesta mouible.

En el tercero signo que se llama *ce maçatl*: en la primera casa hazian fiesta a las diosas que se llaman *ciuapipilti* porque dezian que entonce decendian a la tierra, ataujauã a sus ymagines con papeles, y ofrecianlas ofrendas.

La quarta fiesta mouible

En el signo que se llama *ce maçatl*: en la segunda casa que se llama *vme tochtli*: hazian gran fiesta al dios llamado *Yzquitecatl*, que es el segundo dios del vino, y no solamente a el: pero a todos los dioses del vino que eran muchos: adereçavan este dia muy bien su ymagen en su *cu*, y ofrecianle cosas de comjda, y cantauan, y tañjan delante del: y en el patio de su *cu*, ponjan vn tinajon de pulcre, y hinchianle los que eran taberneros hasta reberter, y yuan a beuer todos los que querian: tenjan vnas cañas con que beujã: los taberneros yuan ceuando el tinajon: de manera que siempre estaua lleno: principalmente hazian esto los *q̃* de nuevo aujan cortado el maguey, la primera agua *mjel* que sacauan la lleuauan a la casa deste dios como *primjcias*.

La quinta fiesta moujble

En el signo llamado *ce xochitl*: en la primera casa, hazian gran fiesta, los principales, y señores, baylauan, y cantauan a honrra deste signo, y hazian otros regozijos: y sacauan entonce los mas ricos plumajes, con que se adereçauan para el areyto: y en esta fiesta, el señor hazia mercedes a los hombres de guerra, y a los cantores y a los del palacio.

La sexta fiesta mouible

En el signo llamado *ce acatl*: en la primera casa, hazian gran fiesta a *quetzalcoatl* dios de los vientos: los señores y principales: esta fiesta hazian en la casa llamada *calmecac*, que era la casa donde morauan los satrapas de los ydolos: y donde se criauan los muchachos, en esta casa que era como vn mones-

a monastery, was the image of Quetzalcoatl. On this day they adorned it with rich ornaments and placed before it offerings of perfumes and food. They said this was the sign of Quetzalcoatl.

The Seventh Movable Feast

In the sign which was called *ce miquiztli*, in the first house, the lords and leading men celebrated a great feast to Tezcatlipoca, who was the great god. They said that this was his sign. Since all of them had their shrines in their houses, where they kept the images of this god and of many others, on this day they decorated this image and offered it perfumes, flowers, and food, and sacrificed quail before it, tearing off their heads. This not only the lords and leading men did, but all the people to whose attention this festival came; and the same was done in the *calpulcos* and on all the pyramids. All prayed, and besought of this god that he grant them favors, for [it was thought] that he was almighty.

The Eighth Movable Feast

In the sign which was called *ce quiauhtl*, in the first house, they celebrated a feast to the goddesses whom they named Ciuapipilti. These, they said, were the women who died in first childbed. They said that they became goddesses and that they dwelt in the house of the sun; and that when this sign reigned, they came down to the earth and afflicted with various sicknesses those whom they met outside of their houses. And hence, in these days, they dared not go out of their houses. They had shrines built in honor of these goddesses in all the suburbs where two streets [crossed], which they called *ciuateocalli*, or by another name, *ciuateopan*. In these shrines they had the images of the goddesses, and on these days they adorned them with papers which they called *amate-teuhtl*. On this feast of these goddesses they slew in their honor those condemned to death for some crime, who were in the jails.

The Ninth Movable Feast

In the sign named *ce quiauhtl*, in the fourth house (which was called *naui ecatl*), because this house was very unlucky they slew in it the malefactors who were imprisoned. And likewise the lord had a number of slaves slain as a superstition. And the merchants and traders made a show or demonstration of the jewels in which they dealt, bringing them forth so that all might see them. And afterwards, at night,

terio, estaua la ymagen de quetzalcoatl: Este dia la adereçauan con ricos ornamentos, y ofrecian delante della perfumes, y comjda: dezian que este era el signo de quetzalcoatl.

La septima fiesta moujble.

En el signo que se llamaua *ce miquiztli*: en la primera casa: hazian gran fiesta, los señores y principales a Tezcatlibuca, que era el gran dios, dezian que este era su sino, como todos ellos, tenjan sus oratorios en sus casas: donde tenjan las ymages deste dios, y de muchos otros: en este dia, componjan esta ymagen, y ofrecianla perfumes, y flores y comjda: y sacrificauan codornizes delante della arrancandolas la cabeça. Esto no solamente lo hazian los señores, y principales: pero toda la gēte, a cuya noticia venja esta fiesta, y lo mjsmo se hazia, en los calpules, y en todos los cues: todos orauan, y demandauan a este dios que les hiziesse mercedes: pues que el era todopoderoso.

La octaua fiesta moujble

En el signo, que se llamaua, *ce quiauhtl*: en la primera casa, hazian fiesta, a las diosas que llamauan Cioapipilti: estas dezian que eran las mugeres que murian del primero parto, dezian que se hazian diosas, y que morauan en la casa del sol, y que quãdo reynaua este sino, decendian a la tierra, y herian con diuersas emfermedades, a los que topauã fuera de sus casas. Y por esto en estos dias, no osauan salir de sus casas. Tenjan edificados oratorios, a honrra destas diosas: en todos los barrios donde auja dos calles: los quales llamauan cioateucalli, o por otro nombre cioateupan: en estos oratorios, tenjan las ymages destas diosas: y en estos dias las adornauan con papeles, que llamauan *amateuhtl*. En esta fiesta, destas diosas matauan a su honrra los condenados a muerte por algun delicto, que estauan en las carceles.

La nona fiesta mouible.

En el signo llamado *ce quiauhtl*: en la quarta casa que se llamaua *nauecatl*, por ser esta casa muy malafortunado, matauan en ella los malhechores, que estauan presos. Y tambien el señor hazia matar algunos esclauos, por via de supersticion: y los mercaderes, y tratantes hazian alarde o demostracion de las joyas, en que tratauan, sacandolas, para que las viessen todos: y despues a la noche, comjan, y beujan, to-

they ate and drank, and held flowers and those canes of perfume. And they sat in their seats. And each one began to boast of what he had gained, and of the distant parts which he had reached. And he belittled the others for their counting for little; [for] neither did they have as much as he, nor had they gone to distant places, as he had. In this the ones made a great mock of the others for a long space of the night.

The Tenth Movable Feast

In the sign which they named *ce malinalli*, in the second house, named *ome acatl*, they celebrated a great festival; for they said that this was *Tezcatlipoca's* sign. In this feast they fashioned the image of *Omacatl*, and one who felt devotion took it to his house that it might bless him and cause his goods to increase. And when this took place, he kept it and preferred not to let it go. He who would let this image go, waited until the next time when the same sign reigned. Then he returned it whence he had taken it.

The Eleventh Movable Feast

In the sign called *ce tecpatl*, in the first house, they brought forth all the ornaments of *Uitzilopochtli*; they cleaned them and shook them out; and they put [them] in the sun. They said that this was his sign and that of *Camaxtli*. This they did at *Tlaca-tecco*. Here they set out, on this day, many kinds of food, very well cooked, like that which the lords eat. They presented all of them before his image. After they had remained there a while, the officials of *Uitzilopochtli* took them up and divided them among themselves, and ate them. And they also incensed the image and offered it quail. They struck off their heads before it, so the blood should be shed before the image. And the lord offered all the precious flowers which the lords used, before the image.

The Twelfth Movable Feast

In the sign named *ce oçomatli* they said that the goddesses called *Ciuapipilti* came down to the earth and [that] they harmed the boys and girls, afflicting them with palsy. And if anyone, at this time, sickened, they said that [the *Ciuapipilti*] had caused it; that he had come upon them. And the fathers and mothers on these days did not let their children go outside the houses, so that they might not come upon these goddesses, whom they held in great dread.

mauan flores: y aquellas cañas de perfumes, y assentauanse en sus asientos: y començaua cada vno a jactarse, de lo que auja ganado, y de las partes remotas, donde auja llegado: y valdonaua a los otros de que eran para poco, nj tenjan tanto, como el, nj aujan ydo a partes remotas como el: en esto tenjan gran chacota, los vnos con los otros, por gran rato de la noche.

La decima fiesta mouible

En el signo que llamauan *ce malinalli*: en las segunda casa llamada *vme acatl*, hazian gran fiesta: porque dezian que esto sino era de *Tezcatlibuca*: en esta fiesta hazian la ymagen de *Omacatl*, y alguno que tenja deuocion, lleuauala a su casa: para que le bendixesse, y le hiziesse multiplicar su hazienda, y quando esto acontecja tenjala, y no la queria dexar: el que queria dexar esta ymagen esperaua, hasta que otra vez, reynasse el mjsmo signo: entonce la lleuaua adonde la auja tomado.

La onzena fiesta mouible.

En el signo llamado *ce tecpatl*. En la primera casa sacauan todos los ornamentos de *Vitzilobuchtli*, los linpiauan, y sacudian, y ponjan al sol: dezian que este era su signo, y el de *camaxtle*: esto hazian *tlacatecco*: aquj ponjan, en este dia, muchas maneras de comjdas, muy bien gujsadas, como las comen los señores: todas las presentauan, delante de su ymagen, despues de auer estado vn rato alli, tomauanlas los oficiales, de *Vitzilobuchtli*, y repartianlas entre si, y comjanlas, y incensauan tambien a la ymagen, y ofrecianla codornizes, descabeçandolas delante della: para que se derramasse la sangre delante la ymagen: y ofrecia el señor todas las preciosas flores, que vsan los señores, delante la ymagen.

La dozena fiesta mouible.

En el signo llamado *ce Oçumatli*: dezian que descendian las diosas llamadas *cioapipilti*, a la tierra: y dañauan a los njños, y njñas, hiriendolos con perlesia. Y si alguno en este tiempo enfermaua, dezian que ellas lo aujan hecho, que se auja encontrado con ellas: y los padres, y las madres, estos dias no dexauan salir a sus hijos, fuera de casa: porque no se encontrassen, con estas diosas, de las quales tenjan gran temor.

The Thirteenth Movable Feast

In the sign which they called *ce itzcuintli*, [which] they said was the sign of fire, they held a great festival in honor of *Xiuhtecuitli*, god of fire. In it they offered him much *copal* [incense] and many quail. They arrayed his image in many kinds of papers and with many rich adornments. Among the rich and powerful, they celebrated a great feast in honor of the fire, in their own houses; they held dinners and banquets in honor of the fire. In this same sign they held elections of lords and consuls, and in the fourth house of this sign they enacted the formalities of their elections, feasts, dances, and gift [giving]. After these feasts, they forthwith proclaimed war against their foes.

The Fourteenth Movable Feast

In the sign named *ce atl*, in the first house of this sign, they celebrated a feast to the goddess of water, named *Chalchiuhtli icue*. All those who dealt in water celebrated the festival—those who sold water, as well as those who fished, and those who gained other livelihoods which there are in the water. These arrayed her image and laid offerings before her, and revered her in the house called *calpulli*.

The Fifteenth Common Movable Feast

The lords, leading men, nobles, and rich merchants, when a son or daughter was born to them, paid much heed to the sign, the day, and the hour in which he was born. And of this they forthwith set out to inform the judicial astrologers, and to ask as to the good fortune or ill of the child who was born. And if the sign in which he was born was propitious, they had him baptized at once; and if it was adverse they sought the most favorable house of that sign [in which] to baptize him. When they baptized him, they banqueted the kinsmen and friends, so that they would be present at the baptism, and then they gave food and drink to all the guests, and also to the children of the whole suburb. They baptized him at sunrise in the house of his father. The midwife baptized him, uttering many prayers and performing much ceremony over the child. This [same] feast they also observe today in the baptism of their children, as to feasting, eating, and drinking.

The Sixteenth Movable Feast

As soon as the parents saw that their son was of

La trezena fiesta mouible.

En el signo que llamauan *ce jtzcuinjtl*: dezian que era el signo del fuego: hazian gran fiesta a honrra de *xiuhtecuitli*, dios del fuego: en ella le ofrecian mucho *copal*, y muchas codornizes: componjan su ymagen, con muchas maneras de papeles, y con muchos ornamentos ricos: entre las personas ricas y poderosas, hazian gran fiesta, a honrra del fuego, en sus mjsmas casas, hazian combites, y vanquetes, a honrra del fuego. En este mjsmo signo: hazian la election de los señores y consules, y en la quarta casa deste sino: hazian la solēnjdad, de sus electiones, combites, y areytos, y dones. Despues destas fiestas apregonauan luego la guerra contra sus enemigos.

La catorzena fiesta mouible

En el signo llamado *ce atl*: en la primera casa deste signo, hazian fiesta, a la diosa del agua llamada *chalchiuhtli ycue*: hazian la fiesta, todos los que tratauan en el agua: ansi vendiendo el agua, como pescando, como haziendo otras gragerias, que ay en el agua. Estos componjan su ymagen, y la ofrecian, y reuerenciaban, en la casa llamada *Calpulli*.

La quinta decima fiesta mouible comū.

Los señores, y principales, nobles, y mercaderes, ricos quando les nacia algun hijo o hija; tenjan gran cuēta con el signo en que nacia; y el dia, y la hora en que nacia: y desto yuan luego a ynformar a los astrologos, judiciarios: y a preguntar por la fortuna buena o mala de la criatura que nacia. Y si el signo, en que nacia era prospero, luego le hazian baptizar, y si era aduerso buscauan la mas prospera casa de aquel signo para le batizar. Quando le batizauan, combidauan a los parientes, y amigos: para que se hallassen presentes al batismo: y entonce dauan comjda, y beujda, a todos los presentes, y tambien a los njños, de todo el barrio: baptizauanle, a la salida del sol, en casa de su padre, baptizauale la partera, diziendo muchas oraciones: y haziendo mucha cerimonja sobre la criatura. Esta fiesta, tambien la vsan agora, en los baptismos de sus hijos, en quanto al combidar, y comer, y beuer.

La sexta decima fiesta mouible.

Desde los padres vian que su hijo era de edad para

age to marry, they spoke to him of their wish to seek a wife for him. And he replied, thanking them for this solicitude which they showed in marrying him. Then they addressed the leading man who had charge of all the young men, whom they called *telpochtlato*, and they told him that they wished their son to marry, since [the son] held doing so to be good. For this they held a great feast for him and for all the young men whom he had in his care; and for this they held conversation with him, after having given food and drink to him and to all those whom he had in his charge. And at the beginning of the conversation they laid before him an axe for cutting lumber or firewood. This axe was a sign that that young man took his leave, now, of the company of the other young men; for they wished him to marry. And thus the *telpochtlato* departed content. After this the relatives decided, among themselves, upon the woman whom they were to give [to the son], and summoned the marriage-makers, who were some old, honored women, that they might go to speak with the parents of the young woman. [The marriage-makers] went two or three times, and spoke, and returned with the reply. During this time, the relatives of the young woman spoke among themselves, and, having decided to give her to him, they gave their consent to the marriage-makers. After this they sought a day of good fortune, of a sign of good disposition [among] which were *acatl*, *oçomatli*, *cipactli*, *quauhtli*. Having chosen one of these signs, the parents of the young man made known to the parents of the young woman the day on which the marriage should be performed, and then began to prepare the necessary articles for the wedding—[those] to eat and to drink, as well as such [things] as capes, smoke tubes, and flowers. This done, they summoned the leading men and all the other people whom they wanted for the wedding. After the feast and [after] many speeches and ceremonies, those acting for the young man came at about nightfall to take the young woman. They carried her, with great solemnity, upon the back of a matron, and with many pine torches burning in two rows before her. Many people surrounded her, behind and ahead, until they brought her to the house of the parents of the young man. Having brought her to the house of the young man, they set them both by the hearth, which they always had in the middle of a hall, full of fire. And the woman was at the left hand of the man. Then the mother of the young man

casarse, hablabanle en que le querian buscar su muger: y el respondia, haziendoles gracias, por aquel cuydado, que tomauan de casarle: luego hablaban al principal que tenja cargo de todos los mancebos, que ellos llamauan Telpuchtlató: y dezianle como querian casar su hijo, que lo tuujesse por bueno: y para esto hazianle vn combite a el, y a todos los mancebos, que tenja a su cargo, y para esto le hazian vna platica, despues de auerle dado de comer, y de beuer a el y a todos los que tenja a su cargo: y en principio de la platica, ponjanle delante vna hacha de cortar madera o leña. Esta hacha era señal que aquel mancebo se despedia ya de la companja de los otros mancebos: porque le querian casar, y ansi el telpuchtlató yua contento. Despues desto determijnauan entre si los parientes la muger, que le aujan de dar, y llamauan a las casamenteras, que eran vnas viejas honrradas, para que fuessen a hablar a los padres de la moça, yuan dos, o tres vezes, y hablaban, y bolujan con la respuesta. En este tiempo los parientes de la moça se hablaban, y concertandose de darsela, dauan el si, a las casamenteras. Despues desto buscauan vn dia bien afortunado, de algun signo, bien acondicionado, quales eran *acatl*, *oçumatli*, *cipactli*, *quauhtli*, aujendo escogido alguno destos signos: los padres del moço hazian saber a los padres de la moça el dia en que auja de hazerse el matrimono, y luego començauan a aperejar las cosas necessarias, para las bodas, assi de comer como de beuer, como de mantas, y cañas de humo, y flores. Esto hecho conbidauan a los principales, y toda la otra gente, que ellos querian para las bodas. Despues del combite, y de muchas platicas, y cerimonjas: venjan los de la parte del moço a llevar a la moça de par de noche, lleuauanla con gran solennidad, a cuestras de vna matrona, y con muchas hachas de teas encēdidas, en dos rencles delante della, yua rodeada della mucha gente, detras y delante, hasta que la llegauan a la casa de los padres del moço: llegada a la casa del moço, ponjanlos ambos, junto al hogar, que siempre le tenjan, en medio de vna sala, lleno de fuego, y la muger estaua, a la mano izquierda del varon: luego la madre del mancebo, vestia vn vipil muy galano a su nuera, y ponjale junto a sus pies vnas naoas muy labradas: y la madre de la moça, cubria cō vna manta, muy galana a su yerno, y atauasela sobre el hombro, y ponjale vn maxtli, muy labrado, a los pies. Hecho esto, vnas viejas, que se llaman titici, atauan la esqujna de la manta del moço con la falda del vipil de la moça. Assi se concluya el

placed a very fine shift upon her daughter-in-law, and put for her, by her feet, a richly embroidered skirt. And the mother of the young woman covered her son-in-law with a very fine cape, and tied it over his shoulder, and laid a very richly embroidered breech clout at his feet. This done, a number of old women, who are called *titici*, tied the corner of the young man's cape to the lower part of the young woman's shift. In this way was concluded the marriage, with many other ceremonies, and dinings, and drinking, and dances, which were given thereafter, as is contained in the account of the marriages.

They observed two other feasts which in part were fixed and in part were movable. They were movable because they were celebrated in interpolated years. One was observed every four years, and the other every eight years. They were fixed because they had year, month, and day assigned. In the one which was celebrated every four years, they pierced the ears of the boys and the girls, and they performed for them ceremonies for good growth, and they purified them over the fire. In the one which they celebrated every eight years, they fasted before it for eight days on bread and water, and enacted a dance in which they assumed the forms or characters of various birds and animals. And they said that they sought good fortune, as is set forth in the appendix of the Second Book.

These movable feasts, in some years, displace the feasts of the calendar, as also happeneth in our calendar.

matrimonjo, con otras muchas cerimonjas, y comeres, y beueres, y bayles, que despues se hazian, como se contiene, en la historia del matrimonjo.

Otras dos fiestas tenjan, que en parte eran fixas, y en parte eran moujbles: eran moujbles, porque se hazian por años interpolados. La vna se hazia, de quatro en quatro años, y la otra de ocho en ocho años: eran fixas porque tenjan año, mes, y día señalados. En la que se hazia, de quatro en quatro años, horadauan las orejas a los njños o njñas: y hazianlos, las cerimonjas, de crezca para bien, y lustrauanlos por el fuego. En la que hazian, de ocho en ocho años: ayunauan antes della, ocho dias a pan y agua, y hazian vn areyto, en que tomauan figuras, o personajes, de diuersas aues y anjmales: y dezian que buscauan ventura, como esta escrito, en el apendiz del segundo libro.

Estas fiestas mouibles en algunos años echan de su lugar a las fiestas del kalendario: como tambien acontece, en nuestro kalendario.

Twentieth Chapter, which telleth of the feast day and the debt-payment which they celebrated during all the days¹ of the month, which they named, which they said was Atl caualo or Quauitl eua.²

It was [the month of] Quauitl eua [when] this feast day came, and when it took place, then the feast day was celebrated for the Tlalocs.

There was the paying of the debt³ [to the Tlalocs] everywhere on the mountain tops, and sacrificial banners were hung. There was the payment of the debt at Tepetzinco or there in the very middle of the lake at a place called Pantitlan.

There they would leave the rubber-spotted paper streamers⁴ and there they would set up poles called *cuenmantli*, which were very long. Only on them [still] went their greenness, their sprouts, their shoots.

And there they left children known as "human paper streamers,"⁵ those who had two cowlicks of hair, whose day signs were favorable. They were sought everywhere; they were paid for. It was said: "They are indeed most precious debt-payments. [The Tlalocs] gladly receive them; they want them. Thus they are well content; thus there is indeed content-

1. *cemilhuilitl*: the term is usually translated as "one day," "all day," or "all the days." Angel María Garibay K., in "Relación breve de las fiestas de los dioses, Fray Bernardino de Sahagún," *Tlalocan*, Vol. II, No. 4 (1948), p. 291, renders it "the first day." Rémi Siméon in *Dictionnaire de la langue nahuatl ou mexicaine* (Paris: Imprimerie Nationale, 1885), in an extended discussion admits a meaning of "the first day," or "all the days." In the corresponding Spanish text Sahagún consistently uses the phrase "en las kalendas."

2. Sahagún, in the corresponding Spanish text, observes that Quauitl eua is the term used by the Mexicans. Cf. Manuel Orozco y Berra, *Historia antigua y de la conquista de México*, 4 vols. (Mexico: Tipografía de Gonzalo A. Esteva, 1880), Vol. II, p. 36: "Xilomanaliztli, — Atlacahualco, — Cuahuitlehua, — Cihuaillhuilitl. Xilomanaliztli, ofrenda de xiloil ó jilotes; nombre usado por los de Tlaxcalla. Cuahuitlehua, quemazon de los árboles; nombre perteneciente á lugares fuera de México. Atlacahualco ó Atlacabualco, nombre admitido por los mexicanos; segun el P. Leon, detencion de las aguas, y es la interpretación de todas que más nos satisface. Cihuaillhuilitl, fiesta de la mujer. El símbolo religioso es la imagen de Tlaloc y un árbol reverdeciendo, con el agua entre las raíces." Cf. also Francisco J. Clavijero, *Historia antigua de México*, 4 vols. (Mexico: Editorial Porrúa, S.A., 1945) Vol. II, pp. 401-402: "... el primer mes, cuyo nombre Acabualco o Atlacabualco, significa la cesación del agua, pues en el mes de marzo cesan las lluvias del invierno en los países septentrionales, en donde tuvo origen el calendario mexicano o tolteca. Lo llamaban también Quahuitlehua, lo que significa la vegetación de los árboles, que se verifica en este tiempo en los países fríos. Los tlaxcaltecas llamaban a este mes Xilomaniliztli, esto es, oblación de las mazorcas de maíz, porque en él ofrecían a sus dioses las del año corrido, para ayudar la siembra que por este tiempo comenzaban a hacer en los lugares altos."

Garibay, in "Relación breve," p. 291, translates *cuahuitlehua* as *palo se alza*; Eduard Seler, in *Einige Kapitel aus dem Geschichtswerk des Fray Bernardino de Sahagún aus dem Aztekischen übersetzt*, ed. Caecilie Seler-Sachs, Walter Lehmann, Walter Krickeberg (Stuttgart: Strecker und Schroeder, 1927), p. 54, translates the name as *die Bäume erheben sich (machen sich auf den Weg)*.

3. *nextlaoaloia*. Cf. *ixtlaua* in Alonso de Molina, *Vocabulario de la lengua mexicana*, ed. Julio Platzmann (Leipzig: B. G. Teubner, 1880), and in Siméon, *Dictionnaire*. Eduard Seler, in *Gesammelte Abhandlungen zur Amerikanischen Sprach- und Altertumskunde*, 5 vols. (Berlin: A. Asher und Co., 1903-23), Vol. II, p. 983, says: "Die Kinderopfer an die Regengötter wurden geradezu nextlaualli 'die bezahlte Schuld' genannt."

4. Garibay ("Relación breve," p. 292) translates *teteuhtl* as *tiras sagradas*.

5. In *ibid.*, Garibay renders *tlacateteuhme* as *tiras humanas* and makes it clear (Nahuatl sentence No. 4) that the term refers to the children who died. Seler, *Einige Kapitel*, p. 54, refers to them as *Menschen-Opferstreifen (Opferpapiere in Menschengestalt)*. They may actually have been paper streamers surmounted by a representation of a human head, and have symbolized the children who died. See illustration from *Biblioteca del Palacio MS* in Wigberto Jiménez Moreno, "Primeros memoriales" de Fray Bernardino de Sahagún (Mexico: Instituto Nacional de Antropología e Historia, Consejo de Historia, Colección Científica, No. 16, 1974), Lámina I.

ment." Thus with them the rains were sought, rain was asked.

And everywhere in the houses, in each home, and in each young men's house, in each *calpulco*,⁶ everywhere they set up long, thin poles, poles coming to a point, on each of which they placed paper streamers with liquid rubber, spattered with rubber, splashed with rubber.⁷

And they left [the children] in many [different] places.

[First was] at Quauhtepetl.⁸ And its same name, Quauhtepetl, went with the one who died there. His paper vestments were dark green.⁹

The second place where one died was the top of Mount Yoaltecatl. Its same name, Yoaltecatl,¹⁰ went with the "human paper streamer." His vestments were black striped with chili red.

The third place was at Tepetzinco.¹¹ There died a girl called Quetzalxoch, [a name] which they took from Tepetzintli, which they [also] named Quetzalxoch. Her array was light blue.

The fourth place was Poyauhtlan,¹² just at the foot, just in front, of the mountain, at Tepetzintli. Its name, Poyauhtecatl, went with the one who died [there]. Thus he went adorned: he was painted with liquid rubber; he was touched with liquid rubber.

The fifth place, there in the middle of the lake, was a place called Pantitlan. The one who died there went with his name, Epcoatl. His vestments, which he went wearing, were set with pearls.

The sixth place to which they carried [a victim] was to the top of [the hill of] Cocotl; he also went with its name, Cocotl.¹³ His array was varicolored, part chili-red, part dark green.

The seventh place was the top of Yiauhqueme; likewise the "human paper streamer" went with its

6. *calpulco*: in the Spanish text, Sahagún consistently uses the term *calpulco* when he refers to the principal temple of the *calpulli*. Cf. Bernardino de Sahagún, *Historia general de las cosas de Nueva España*, ed. Angel María Garibay K., 4 vols. (Mexico: Editorial Porrúa, S.A., 1956; hereafter referred to as Sahagún, Garibay ed.), Vol. I, p. 263: "*calpulco o parroquia de su barrio*"; p. 345: "*calpulco, que era la iglesia de aquel barrio*." On the *calpulli*, the fundamental territorial-economic-social-political-religious-lineage unit, see William T. Sanders, "Settlement Patterns in Central Mexico," in Gordon F. Ekholm and Ignacio Bernal, eds., *Archaeology of Northern Mesoamerica*, Handbook of Middle American Indians, Vol. 10, Robert Wauchope, gen. ed. (Austin: University of Texas Press, 1971), pp. 13-15.

7. See n. 5. Sahagún, in the corresponding Spanish text, refers to "*rnos papeles, llenos de gotas de rilli: a los quales papeles llamauan amateteujtl*." For *tlaulchachapatztli*, cf. *chachapani* in Molina, *Vocabulario*.

8. Maps of the Valley of Mexico in colonial times locate most of the places and features mentioned by Sahagún, but the frequent repetition of place names is at times confusing. Of Quauhtepec, Sahagún's Spanish text says: "*es una sierra eminente que esta cerca del itlatulco*."

9. *yiapaltic*: cf. Charles E. Dibble and Arthur J. O. Anderson, *Florentine Codex, Book XI, Earthly Things* (Santa Fe: School of American Research and University of Utah, 1963; hereafter referred to as Dibble and Anderson, *Book XI*), p. 244.

10. The Spanish text explains: "*es una sierra eminente, que esta cabe guadalope*."

11. *Ibid.*: "*es aquel montezillo, que esta dentro desta laguna, frontero del itlatulco*."

12. *Ibid.*: "*es un monte, que esta en los terminos de tlaxcalla, y alli cabe tepetzinco*."

13. *Ibid.*: "*es un monte que esta cabe chalco atenco*."

name, Yiauhqueme. As to the clothing which he had with him, he was all dressed in dark green.

These were all the places where the debt-payments, the "human paper streamers," died.

And all went with their head-bands.¹⁴ They were crammed with precious feathers; they had sprays of precious feathers. Their green stone necklaces went with them; they went provided with bracelets — they went provided with green stone bracelets. They had their faces liquid rubber-painted; their faces were painted with liquid rubber; their faces were spotted with a paste of amaranth seeds. And there were their rubber sandals; their rubber sandals went with them. They all went honored; they were adorned, they were ornamented with all valuable things which went with them. They gave them paper wings,¹⁵ they were of paper; they each had paper wings. In litters were they carried; they went housed in precious feathers, there where each of them customarily went. They went sounding flutes for them.

There was much compassion. They made one weep; they loosed one's weeping; they made one sad for them; there was sighing for them.

And when they were brought to the place of vigil, in the Mist House,¹⁶ there all night was to be spent in vigil. The offering priests and the *quaquacuilitin*,¹⁷ those who were old offering priests, made them keep the vigil. And if any of the offering priests avoided them, they would call them "the abandoned ones." No longer did one join others in singing; nowhere was he wanted; nowhere was he respected.¹⁸

And if the children went crying, if their tears kept flowing, if their tears kept falling, it was said, it was stated: "It will surely rain." Their tears signified rain. Therefore there was contentment; therefore one's heart was at rest. Thus they said: "Verily, already the rains will set in; verily, already we shall be rained on."

And if one who was dropsical was somewhere, they said: "There is no rain for us."

And when the rains were already to pass, when

14. Seler, *Einige Kapitel*, p. 57, reads *ymaxilatzon*, which he translates as *ibre eigentümliche Frisur*.

15. Corresponding Spanish text: "ponjanlos vnas alas de papel como angeles."

16. *Ibid.*: *aiauhcalco* is described as "un oratorio que estaua iunto a tepetzinco de la parte del occidente."

17. *quaquacuiliti* (sing., *quacuilli*): in Seler's *Gesammelte Abhandlungen*, Vol. II, p. 987, it is suggested that the meaning of the term is probably "der zum Haupte gewählt ist." In Sahagún's *Histoire générale des choses de la Nouvelle-Espagne*, trans. D. Jourdanet and Rémi Siméon (Paris: G. Masson, Editeur, 1880; hereafter referred to as Sahagún, Jourdanet-Siméon ed.), p. 110, n. 2, the translators render the term *preneur de têtes*.

18. In the corresponding Spanish text, Sahagún explains in greater detail: "Si alguno de los mñistros del templo, y otros q̃ llamauan quaquacuylti, y los riejos se boluian a sus casas, y no llegauan a donde aujan de mutar, los niños: tenjanlos por infames, y indignos de nningun oficio publico: de ay adelante llamauanlos mocauhque, que qujere dezir dexados."

they were already to end, when already they were at their close, thereupon the curve-billed thrasher¹⁹ sang; it was the sign that continuous rains would set in. Then came the Franklin gulls.²⁰ And also came the falcons;²¹ they came crying out. They were the sign that ice was to come; already it would freeze.

And at the time called Quauitl eua, then on the round stone of gladiatorial sacrifice there appeared, there came into view those to be striped. And of those who were only to die, it was stated: "They raise poles for the striped ones."²² They were brought there to Yopico, [Xipe] totect's temple.²³ There they intimated to them how they were to die; they tore out their hearts; yet they were only putting them to the test. It was with the use of tortillas of ground corn which had not been softened in lime,²⁴ or "Yopi"-tortillas, that they tore their hearts from them.

And four times they appeared before the people; they were brought out before them; they were made to be seen by the people; they were made known to them. They gave each of them things; they gave each of them their paper vestments.

The first time they were given [things] with which they were adorned, they were red. They went red. They were red. Their paper vestments were red.

The second time their paper adornment was white.

The third time they went with vestments which were red.

The fourth time they were white.

Finally they adorned them, finally they gave them, finally [the victims] wore that in which their task would end, in which [the sacrificer] would put them to death, in which [the victims] would breathe their last, in which they would be striped. For this last time they took their red garments.

No more did they change [garments]: no longer did they keep changing them. And with liquid rubber they ornamented [the victims] with stripes.

And the captors, those who had captured men, who had captives, who had taken men, also anointed themselves with ochre; they covered themselves with

Debe entenderse — según el Dr. Alfonso Caso — que sobre el embijado de tiza (yeso), les pintaban rayas rojas longitudinales. También podría ser que les sajasen la piel y de las sajaduras brotase sangre." For the act of striping and a discussion of agricultural connotations of the ceremony, see Selser, *Gesammelte Abhandlungen*, Vol. II, pp. 719, 1000, 1073. See also Appendix to this volume, pp. 203–4.

23. Yopico. For location of the temple and its reference to Xipe Totec, see Selser, *Gesammelte Abhandlungen*, Vol. II, pp. 772, 781.

24. *yotlaxcalli*: Sahagún, Garibay ed., Vol. I, p. 60, refers to them as "panes ácidos que ellos llamaban yotlaxcalli."

feather down; they covered their arms, their legs with white turkey feathers.

And also they were given costly devices; these were not given for always. It was only at the time that one warmed them in the sun; it was only at the time that one danced the captives' dance. One only appeared with them; one only was seen with them; one only vaunted himself with them; one was with them only at the time it was a feast day; with them one only made known to men that his captive was a striped one.

And his shield went with him; it went resting on his arm. With it he went bending his knees. And his rattle stick went with him; he went rattling his rattle stick. He went planting the rattle stick forcefully [on the ground]; it rattled; it jingled.

And all were thus ornamented, all who had captives, who were takers of captives, whose captives would be striped when the feast day of Tlacaxipeualiztli arrived.

Twenty-first Chapter, which telleth of the honors and the debt-payment which they used to render at the time of the entire second month, which was called Tlacaxipeualiztli.¹

Tlacaxipeualiztli. This feast day came and was thus celebrated: it was the time when all the captives died, all those taken, all who were made captive, the men, the women, all the children.²

Those who had captives, when, on the morrow, their captives were to die, then began to dance the captives' dance, when the sun had passed noon. And all night one held a vigil for his captive there in his *calpulco*. And there he took hair from the crown of [the captive's] head [and] placed it before the hearth³ when the night divided in half, when it was time to fast.

And when it dawned, then they made [the captive] leave, that he might go to die, he who would die on this very feast day. And during the whole day they flayed all of them. They were flayed; hence [the feast day] was called The Flaying of Men.

And the captives were given the names *xipeme* and *tototecti*.⁴ Those who slew them were the offering priests. Those who had captives did not slay them; they no more than left them, they no more than left them in the hands of [the priests],⁵ who went seizing them, pulling them by their heads; they went taking them by [the hair of] their heads; they went taking them by [the hair of] the tops of their heads. Thus they made them climb to the top of the temple.

1. This most spectacular of ceremonies — the flaying of men — was said by Fray Diego de Durán to have been invented by Moctezuma I's general Tlacaelel. See *Historia de las Indias de Nueva-España y las islas de Tierra Firme*, ed. José F. Ramírez, 2 vols. (Mexico: Imprenta de J. M. Andrade y F. Escalante, 1867–80; hereafter referred to as Durán, *Historia*), Vol. I, p. 174. Miguel Acosta Saignes, in *Tlacaxipeualiztli, un complejo mesoamericano entre los caribes* (Caracas: Universidad Central, 1950), *passim*, argues that it is an ancient complex and in various aspects very widespread.

In Mexico, its place as a spring festival, celebrated when the soil was prepared for planting, is well recognized. Those who wore the human skins represented the renewal of vegetation. See Alfonso Caso, *The Aztecs, People of the Sun* (Norman: University of Oklahoma Press, 1958), pp. 49–51, where, besides, origin of the ceremony in Guerrero or Oaxaca is suggested.

2. Clavijero, *Historia antigua*, Vol. II, p. 149, adds that "algunas de estas victimas solían ser los ladrones de oro y plata que eran condenados por la ley del reino a semejante sacrificio."

3. Seler, *Einige Kapitel*, p. 62, translates thus: "legen es" — the hair — "vor dem Feuerberdenieder"; Sahagún, in the corresponding Spanish text, says: "Junto al fuego hazian esta ceremonia."

4. Corresponding Spanish text: "a ellos los llamauan xipeme, y por otro nombre tototecti, lo primero, qujere dezir, desollados, lo segundo, qujere dezir, los muertos a honrra del dios totecti."

Besides being worn as described, the skins are said by Juan de Tovar to have been used to forecast a wet or a dry year, and the chiefs directed agricultural work accordingly — George Kubler and Charles Gibson, *The Tovar Calendar*, *Memoirs of the Connecticut Academy of Arts and Sciences*, Vol. XI (New Haven: Yale University Press, 1951), p. 22.

5. In the Spanish text, Sahagún definitely states that the captive was delivered to the priest by the captor.

And when some captive lost his strength, fainted, only went continually throwing himself on the ground, they just dragged him.

But when one made an effort, he did not act like a woman; he became strong like a man, he bore himself like a man, he went speaking like a man, he went exerting himself, he went strong of heart, he went shouting. He did not go downcast; he did not go spiritless; he went extolling, he went exalting⁶ his city.

He went with firm heart; he went saying: "Already here I go: You will speak of me there in my home land!"

And things being so, they were made to arrive at the top [of the pyramid], before [the sanctuary of] Uitzilopochtli.

Thereupon one at a time they stretched them out on the sacrificial stone. Then they delivered them into the hands of six offering priests; they stretched them out upon their backs; they cut open their breasts with a wide-bladed flint knife.⁷

And they named the hearts of the captives "precious eagle-cactus fruit." They raised them in dedication to the sun, Xippilli, Quauhcleuanitl.⁸ They offered it to him; they nourished him.

And when [the heart] had become an offering, they placed it in the eagle vessel.⁹ And these captives who had died they called eagle men.¹⁰

Afterwards they rolled them over; they bounced them down. They came breaking to pieces; they came head over heels; they each came headfirst; they came turning over and over. Thus they reached the terrace at the base of the pyramid.¹¹

And from here they removed them.

And they were in the hands of the old men, the *quaquacuiliti*, the old men of the *calpulli*. They took

6. Read *quithucayotituih*.

7. Seler, *Einige Kapitel*, p. 63, specifies a "dicken breiten Feuersteinmesser." Siméon, *Dictionnaire*, defines *ixquauac* as "Couteau pour les sacrifices humains, fait avec du silex ou de l'obsidienne. . . ." Fray Toribio de Benavente Motolinía's "Historia de los indios de Nueva España," in *Colección de documentos para la historia de México*, ed. Joaquín García Icazbalceta, 2 vols. (Mexico: Librería de J. M. Andrade, 1858-66), Vol. I, p. 40, definitely states that the knife was of flint, not obsidian. Motolinía describes it as "un navajon como hierro de lanza, no mucho agudo porque . . . no se puede hacer muy aguda. . . ."

8. *quatleuanjtl*: in Bernardino de Sahagún, *Historia de las cosas de Nueva España*, ed. Francisco del Paso y Troncoso (Madrid: Hauser y Menet, 1905-07; hereafter referred to as *Real Palacio MS Vols. VII and VI*), Vol. VII, the text reads *quaubilevanitl*, but it is possible that the *ub* has been crossed out.

9. Seler consistently renders the term *quaubxicalli* as *Adlerschale* (cf. *Einige Kapitel*, p. 64). In *Gesammelte Abhandlungen*, Vol. II, pp. 704-11, he breaks the word down into *quauitl* and *xicalli* (wooden vessel), and argues that the syllable *quaub* was always understood to mean eagle. The vessels seem actually to have been made of stone, and were used not only for the hearts but for the blood as well. Sahagún, no less consistently than Seler, uses the term *xicara de madero*.

10. Corresponding Spanish text: "Después sacados los coraçoñes, los llamauan quauhteca." Seler, *Gesammelte Abhandlungen*, Vol. II, p. 704, translates *quaubtecal* as "der aus dem Adlerlande." He adds (p. 709): "Und zur Sonne, in das Haus der Sonne, nach dem Osthimmel, als ihr Diener, als quauhtecatli, gieng auch die Seele des Geopfertem."

11. *Apetlatl* is a small terrace projecting at the foot of the pyramid stairway (cf. Sahagún, Garibay ed., Vol. III, p. 54).

them there to their *calpulco*, where the taker of the captive had made his undertaking, had said his say, had made his vow.

From there they removed him in order to take him to the house of [the captor], in order to eat him. There they portioned him out; they cut him to pieces; they distributed him. First of all, they made an offering of one of his thighs to Moctezuma. They set forth to take it to him.

And as for the captor, they there applied the down of birds to his head and gave him gifts. And he gathered together his blood relatives; the captor assembled them in order to go to eat at his home.

There they made each one an offering of a bowl of stew of dried maize, called *tlacatlaolli*. They gave it to each one. On each went a piece of the flesh of the captive.

They named [the captor] "sun," "chalk," "feather," because he was as one whitened with chalk, decked with feathers.

The captor's being pasted with feathers was done because he had not died there in war or else [because] he would yet go to die, would go to pay the debt [in war or by sacrifice]. Hence his blood relations greeted him with tears; they encouraged him.

And on the morrow there was the striping.¹² Until early morning, when it was to dawn, they held vigil for them all night until night ended. Thus the captives, the striped ones, spent all night until the time it dawned.

From those whom they were to stripe, once more they took hair [from the crowns of their heads] at midnight.

Hence it was said: "The eagle man is taken upwards," because indeed he who died in war went, went looking, sat resting in the presence of the sun. That is, he did not go to the place of the dead.

And therefore he who took hair [from the crown of a captive's head] kept his hair safely.

Because thus he merited honor, flowers, tobacco, capes.

Thus his valor would not in vain perish; it was as if thus he took renown from the captive.

And he who took the captive was adorned, there at [the Temple of] Tecanman, in Tenochtitlan, with white turkey down; he was pasted with feathers as is set forth in [the Feast of] Quauitl eua.

12. See Chap. 20, n. 22.

And in the place where the *tototecti* waited,¹³ they were in order, they were in rows upon white earth or upon grass, for there was white earth in the place where they waited.¹⁴

And wherever in the city grass was shaken out, upon it they placed, set up, exhibited, before all, the *xipeme* who had put on the skins of men.

And any who had become drunk, unruly like warriors, daring, foolhardy, full of spirit, lively, proud of their valor, playing the part of men, kept provoking them, menaced them, kept starting a fight, provoked them to battle.

And to arouse their wrath completely, verily to move them, verily in order to bring out their rage, their anger, they would snatch at their navels. They snatched at their navels; they pinched their navels.

Then the *xipeme* went in pursuit. Behind them, at their backs, marched a Totec, named the Youallauan; he followed them; he went menacing them. All the *tototecti* then set upon [the warriors]; they took after them; they went fighting them; they went capturing them; they went taking them in their hands. It was as if they were on the heels of their interceptors.

And [the others] went turning back, went circling back; with pine staves they went threatening them.

And if some of the interceptors were taken, the *xipeme* beat them repeatedly with the rattle sticks. They trampled them; they made them angry.

And they took one to Yopico. Not for nothing did he come out; not for nothing was he let free. Something was exacted for it, something was taken for it, perhaps a turkey hen, mayhap a great cotton mantle he offered one, etc.

As was said in the description of Xipe, just so was it done. Afterwards they visited, they entertained, they amused the *tototecti*, the *xipeme*.

Then began the gladiatorial sacrifice.¹⁵ The captives were placed in order; the captors remained accompanying each one, remained bringing each one. Then also the striped ones came forth. An ocelot warrior swiftly led; he swiftly led them; he swiftly

13. Although in the following paragraphs the Nahuatl text refers to the *tototecti* and the *xipeme*, both names refer to the same persons. See n. 4.

14. In the corresponding Spanish text, Sahagún states: "ponjanse todos sentados, sobre vnso lechos de heno, o de tiçatl, o greda estando alli sentados." See also Appendix in this volume, p. 204.

15. A less detailed description of this same ceremony appears in the *Real Academia MS* as the latter part of its Chap. 17 (the *Florentine Codex*, Book VIII, Chap. 20). The similarity of the two accounts may explain why the *Real Academia MS* version was deleted when Book VIII of the *Florentine Codex* was prepared. See Arthur J. O. Anderson and Charles E. Dibble, *Florentine Codex*, Book VIII, *Kings and Lords* (Santa Fe: School of American Research and University of Utah, 1954), pp. 83–86.

guided them. He swiftly encountered them. He displayed his shield, his obsidian-bladed club; he raised them in dedication to the sun.¹⁶

Then once again he turned back; he retreated, he turned to the rear; once again he went back.

When this was done, there then followed him, there came second after him an eagle warrior; he came second. Similarly he raised his shield, his obsidian-bladed club in dedication to the sun.

Once again there emerged another ocelot warrior; he came out as third. He came quickly after one as third. He did the same. He swiftly entered.

Yet again an eagle warrior came forth; he did everything in the same way. All four came forth fighting; they raised their shields, their obsidian-bladed clubs in dedication to the sun.

No longer did they delay. As they were turning to the rear, at once they were coming forth. They came dancing; they each went turning about. They each went as if stretched on the ground; they each went on the ground; they each went stretched flat; they went looking from side to side; they each went leaping upwards; they each went fighting.

And when this was done, then the Youallauan came forth; he came forth quickly as Totec; he only followed them; he came quite last; he hung on quite behind them; he came quite last of all after all four of the great ocelot [and] eagle warriors. They only extended their arms; they only stretched out their arms; they raised their shields, their obsidian-bladed clubs in dedication to the sun.

Thereupon came forth, arrived, were ranged in order all the impersonators, the proxies of all the gods.¹⁷ They were called the lieutenants, the delegates, the impersonators.

In just the same way they went. They went in order; they went together. Thus they came down; they started from there at Yopico, from the very top of the Temple of Yopitli.

And when they had come to arrive down below, on the ground, on the earth, they encircled the round stone of gladiatorial sacrifice. When they had encircled it, they seated themselves. They were in order upon large backed seats called roseate spoonbill feather seats.

And as they were extended, as they were extended in order, so the Youallauan¹⁸ was leading; again he

18. Corresponding Spanish text specifies "*el principal sacerdote, de aquella fiesta, que se llamaua ioallaoa.*"

was first; he was in the lead; because it was his office, his personal privilege that he sacrifice to the gods, that he slay one; at his hands would perish, at his hands would be hacked open all the eagle men.

When this was done, then musical instruments were blown; conch shells, large seashells were blown; there was whistling with fingers placed in the mouth, and there was singing. With singing, with blowing of trumpets, [the Cozcateca] arrived. The Cozcateca placed themselves in order; their shoulders each went decked with heron feather flags. They encircled the round stone of gladiatorial sacrifice.

One [of the captors] quickly seized a captive. The captor, he who owned the captive, went holding him by the head in order to bring him to the round stone of gladiatorial sacrifice.

When they had brought him, they gave him pulque; and the captive raised the pulque four times in dedication,¹⁹ and afterwards drank it with a long hollow cane.

Then still another man, [a priest], came; he beheaded a quail for the captive, the striped one. When he had beheaded the quail, he raised the captive's shield [to the sun], and he cast the quail away behind him.

When this was done, then they made [the captive] climb upon the round stone of gladiatorial sacrifice; and when they had set him up on the round stone of gladiatorial sacrifice, a man, the bear [priest], confronted him. He represented the one called "Old Bear."²⁰ It was as if he were the uncle of the striped one.

Then he took the "sustenance" rope, which reached to the center [of the stone and] which was fastened [to it]. Then he tied it about the waist of the captive.²¹ And he gave him a war club decked with feathers, not set with obsidian blades.

And he placed before him four pine cudgels, his missiles to throw at one,²² to defend himself with. And the captor, when he had gone to leave his captive on the round stone of gladiatorial sacrifice, thereupon went away; he stopped where he had been standing before; he stood dancing; from where he

20. "*venja vno de los sacerdotes, o ministros del templo, vestido con vn cuero de osso*" — corresponding Spanish text. Cf. Dibble and Anderson, *Book XI*, p. 5. Seler translates *cuetlachili* as kinkajou, in *Einige Kapitel*, pp. 69, 73.

21. Tied to the captive's ankle, according to Durán, *Historia*, Vol. I, p. 177.

22. In *ibid.*, and later (p. 284), descriptions respectively specify "*quatro pelotas, hechas de palo de tea*," and "*quatro troços de palo de tea*."

was he stood watching; he stood looking at his captive.

Then they fought each other; they kept menacing each other; they threatened each other. They looked at each other well [to see] where they would smite each other, would cut each other in a dangerous place, perchance in the calf of the leg, or in the thigh, or on the head, or in the middle.

And if some captive was valiant, courageous, with great difficulty he surpassed [his adversary]. He met all four of the ocelot [and] eagle warriors; he fought them. And if they could not weaken him, then there went one who was left-handed. Then this one wounded his arms; he felled him; he felled him flat. This one appeared as [the god] Opochtli. And although the striped one already faltered, already weakened, also he quite acquitted himself as a man; he still acquitted himself as a man.

And when one only went faltering, only went on all fours, went fainting, only went undone, only vainly, only impotently, they snatched his war club. Thus the one who striped him, the striper, confronted him.

And on the other hand there was the one who no longer did anything, no longer used his arms, no longer defended himself with them, no longer attended to it, no longer took the trouble, no longer spoke. At once he faltered, he fainted, he fell on the surface, he threw himself down as if dead, he wished that breath might end, that he might endure it, that he might perish, that he might cast off the burden of death.

And then they quickly grabbed him, quickly seized him, held him thrown down, held him stretched out on the edge of the round stone of gladiatorial sacrifice.

And then at that time the Youallauan went [forth]; he came in the guise of Totec. He gashed [the captive's] breast, seized his heart, raised it in dedication to the sun. The offering priests placed it in the eagle vessel. And another man, an offering priest, carried the [hollow] eagle cane,²³ set it standing in the captive's breast [cavity] there where the heart had been, stained it with blood, indeed submerged it in the blood. Then he also raised [the blood] in dedication to the sun. It was said: "Thus he giveth [the sun] to drink."

And the captor thereupon took the blood of his

captive in a green bowl with a feathered rim. The sacrificing priests poured it in for him there. In it went standing the hollow cane, also feathered. And then the captor departed to nourish the demons. He went everywhere; he went every place; he omitted no place; nowhere did he forget in the *calmecacs*, in the *calpulcos*. On the lips of the stone images, on each one, he placed the blood of his captive. He made them taste it with the hollow cane. He went with his warrior's insignia.²⁵

And when he had gone everywhere, when he had gone to reach everywhere, then he left the insignia at the palace, and he caused [the body of] his captive to be taken to the *calpulco* where they had passed the night in vigil for him. There they flayed him. Then [the captor] had [the flayed body] taken to his home, where they cut it up, so that it would be eaten, so that it would be [other] people's lot. And it was said that they would be considered gods.²⁶ As it is told elsewhere, so likewise was it done.

But the captor could not eat the flesh of his captive. He said, "Shall I perchance eat my very self?" For when he took [the captive], he had said: "He is as my beloved son." And the captive had said: "He is my beloved father." But yet on someone else's account he might eat of one's captive.

And the captor kept [the captive's] skin for himself; he went lending it to others. For twenty days there was begging in it; it was passed from one to another; it was worn all day. He who wore it customarily gave the captor all that was given [him], all that he gathered. Afterwards [the captor] divided up, distributed [the gifts] among [all of] them. Thus he made use of his skin.

And when this was done, when they had finished with the striped ones, then they danced, they went in procession about the round stone of gladiatorial sacrifice. All the impersonators [of the gods and] those who had done the striping went in their array. Thus did they who did the slaying go ending [the ceremony]. All severally took with them the head of a captive, of a striped one; with them they danced. It was said: "They dance with the severed heads."

And the old bear man pulled up the "sustenance" rope; he raised it in dedication to the four directions. He went weeping, he went howling like one be-

25. "yua conpuesto con sus plumages, y cō todas sus ioyas" (*ibid.*).

26. *teteuhtiloç*: Seler, in *Einige Kapitel*, p. 72, n. 1, holds, of *teteuhtiloç*, that it is derived from *teotia*, equivalent to *tonaltia*; *teotl* is equivalent to *tonatiuh* or *tonalli*. Hence the meaning, to apportion as a favor.

reaved; he wept for those who had suffered, who had died.

And also from cities which were his enemies, from beyond [the mountains] those with which there was war, Moctezuma secretly summoned, secretly admitted as his guests the Nonoalca, the Cozcateca, the Cempoallans, the Mecateca. There was witnessing, there was wonder; then consequently there was breaking up, there was dispersal.²⁷

And when there was the striping, at that same time were eaten tortillas of uncooked maize.²⁸ The onlookers took tortillas of uncooked maize there; they went as their refreshments; they sat eating them there.

And on the next day, the third day, then each began the bringing out of persons. It was very late at night that it was begun there at the great palace. The Tlatelolca began it; they ended it at the time of eating. Then the offering priests replaced them. They adorned themselves, they danced in quite mixed things, quite various arrays: butterfly nets, fish banners, clusters of ears of maize, coyote heads made of a paste of amaranth seeds, S-shaped tortillas, thick rolls²⁹ covered with a dough of amaranth seeds which they covered on top with toasted maize, and red amaranth (only it was red feathers), and maize stalks with ears of green or tender maize.

After midday the offering priests rested. Thereupon the Tenochca [and] the Tlatelolca joined, paired. The Tenochca formed two rows; also the Tlatelolca formed two rows. They went facing each other. Very slow was the dancing; very much in harmony went the dancing. Then there was emerging through the palace entrance; there was stopping. Moctezuma brought them forth; he went dancing. Two great rulers, Neçualpilli of Texcoco [and] Totoquiuahtli, ruler of Tepaneca land, came each following him, went facing him. Great solemnity reigned while there was dancing.

And when night fell, when it was going dark, there was dispersal; then began the singing and

Twenty-second Chapter, in which are described the feast day and the debt-paying which they celebrated in the second month, called, known as Tlacaxipeualiztli.¹

And when it was this [time], the rattle boards were sown² there at Yopico. And only they, the old men of the *calpulli* at Yopico,³ sat singing, sat rattling their rattle boards until the day was done. Thus they sat passing all day, thus they sat celebrating the day, thus they sat displaying the day; they sat making the day wear away; they sat wearing the day away. Thus they continued to pass the day.

And flowers were offered. Hence was it said: "Flowers are offered." For all the various flowers which for the first time blossomed, the flowers which came [out] first, the flowers which came [out] ahead, were then given as offerings. No one first smelled them unless he would first make an offering, would give them as gifts, would lay them out as offerings. They were whatever small flowers they saw which spread out blossoming, spread out bursting, spread out popping into bloom — the flowers of spring. Small, little, tiny, minute ones, no matter how many, no matter how little, no matter how small, no matter how tiny, they bound them each together at the ends; they bound them up.

And in order to look for the flowers, they all went together to the fields to bring them in, although some of the field people sold them here.

And when this was done, they ate tamales of wild amaranth seeds.⁴

Especially the Coateca, they who belonged to the *calpulli* of Coatlan, venerated [this feast day]. They made offerings to their deity called Coatl icue or Coatlan tonan.

They placed their trust in her; she was their hope; they depended upon her; she was their support. To her they lifted their voices.

1. The corresponding Spanish text specifies: "... que hazian en el postrero dia, del segundo mes, que se dezia tlacaxipeualiztli." In Chapter 3, this month is correctly named Toçoztontli.

2. *ioan moteneva ayacachpixollo* — "Y se dice 'se siembran sonajas'" (Garibay, "Relación breve," p. 294). Seler, in *Einige Kapitel*, p. 77, has, for *aiacachpixolo*, "findet statt das Ausstreuen mit der Rassel."

3. "los rezinos de aquel barrio," according to Sahagún's Spanish text.

4. Cf. Sahagún, Jourdanet-Siméon ed., p. 92, n. 3: *tzatzapaltamalli* — "Peut-être pour tzatzapatamalli, de tzatzapatli, épine ou herbe piquante, et atamalli, sorte de tamal."

And at that same time were hidden away the skins;⁵ the human skins were placed aside, left there at Yopico.

Any of the youths who had wished to, to whom it had been pleasing, who had wanted to, who had been drunk, had gone wearing [the skins].

And some had made vows to hide away the skins because perchance they were covered with sores, perchance had a scabby skin, or had maladies of the eyes. Though for some this was successful [and] thus they recovered, some did not recover.

Each one of the captors came forth from this home; they left; they went wearing the [captive's] skin. Paper streamers went upon their shoulders and upon the calves of their legs.

And as they went, they went jumping, they went stinking; they went in a group. So did they stink [that the stench] verily wounded the head. It could not be endured. There was holding of the nose when they were met, when they went among people.

And the skins were in pieces; they crackled; they were hard. And some just carried them in their arms in baskets, those which were completely dried hard, those which were decayed, those which were as stiff as a board.

And the captors came in lead of the *tototecti*. They went with their incense ladles, each with his incense ladle. They went with their gifts tied up in bundles: capes perchance painted with designs, or else brown ones⁶ or crimson ones, or in two colors diagonally divided, or with the border striped with feathers. They had feathers striping the edge; they had feathers surrounding the edge.

And when there had been arriving at the place where the skins were hidden away, on the top of the Temple of Yopitli, Yopitli's temple, one dedicated [incense] to the four directions; the captors offered incense; they raised their incense ladles [to the sky]; they shook them.

And those who stood wearing the skins then took them off, stood divested [of them]. And when they had drawn off the skins, they cast them down, they threw them into a cave. And the captor went down to the bottom [of the temple pyramid]; he quickly left, he quickly deposited the coals in the fire basin.

And those who had gone to dispose of the skins which they had gone about wearing washed their

5. *eotlatilo*: Seler, in *Einige Kapitel*, p. 78, uses the term *das Vergraben*; Garibay ("Relación breve," p. 295) has, for *yoan misoaya bevatlatillo*, "y se llamaba, 'se ocultan las pieles'"; the corresponding Spanish text of Sahagún reads, "escondian en alguna cueva."

6. *camopalli*: cf. Dibble and Anderson, *Book XI*, p. 244.

faces not with water but rubbed their faces with flour, with cornmeal. They each scrubbed their faces; they used flour on their faces.

They left to be bathed there at the temple in their bathing place. They did not scrub each of them; they just struck them, they slapped them. [The sound] was like the breaking of ocean waves. Thus did the grease diminish; thus it could come to an end. And also it was when there was washing of the hair. The captor washed out the dirt; he used *amolli* [soap].⁷

For while they had fasted for their captives, they had never bathed themselves. They had soiled themselves as the twenty days had passed, together with those of their household who had never bathed themselves. They washed the heads of all; they soaped themselves. Hence it was said: "There is the washing of the hair," or, "There is the washing away of the filth," so had they soiled themselves.

And thereafter the owner of the captive set up, put in place in the courtyard [of his house] a woven twig ball⁸ on three feet; it had little feet. On it he placed each of the paper adornments with which had been adorned the Totec [when he died].⁹

And from here he took out a man pleasing to look upon, acceptable, strong. Once again he was adorned [with the paper vestments of Xipe]. In them he took after people; he dispersed them; the man kept vexing them. He ran; he went sheltering himself under his shield; he went rattling his rattle board. They cried out at him; they chased him, stoning him; they pelted him with stones; they attacked him with stones.

He frightened everyone. When they dispersed, they said: "Now cometh he who hath washed his hair."¹⁰

And if he captured someone, if he quickly seized someone, he despoiled him, he ran off with his cape. However many capes he took from people, he carried them to the captor's house. In the courtyard on the ground he kept beating the capes.

Thereupon the captor set up his "pole of the flaying of men" in the courtyard; it betokened that this man [the captor] had flayed a captive.

And also, when he had done this, he suspended

7. *amolli*: *ibid.*, p. 133.

8. Corresponding Spanish text: "*vn globo redondo, hecho de petate.*"

9. *Ibid.*: "*ponia todos los papeles, con que se auia adereçado, el captiuo quando murio.*"

10. Cf. Sahagún, Jourdanet-Siméon ed., p. 93, n. 1: *tetzompacqui* — "*C'est-à-dire que réjouit (paqui) le seigneur, le maître (tzontli, en composition tetzon, que s'emploie métaphoriquement pour dire: noble d'une haute famille).*" This would imply a double entendre.

[from it his trophy]; but its [remaining] flesh he first removed from the captive's thigh bone,¹¹ and from it he hung the sleeveless knotted cord jacket [and] a small spray of heron feathers.

And he wrapped the thigh bone thoroughly in paper; he provided it a mask; and this was called the god-captive.¹²

And when he had hung it up, he summoned [his friends and his kin] to a feast. There was eating; there was drinking. The old men [and] the old women became intoxicated.

And also a man decked himself in the captor's insignia. There was much contentment; he leapt about. Reeds were laid out. The old men of the *calpulli* gathered to sing for him.

And he offered white pulque in various gourds. He kept menacing it.

Afterwards it was as if he shot it. Then he drank it.

And when he had drunk it, then he also had it taken elsewhere. He did similarly in a third place; similarly in a fourth place.

Here they finished when he had done similarly in all places. It was done in no more than one day.

But song did not end in the song house until they went ending when it was [the feast of] Uey toçoztli.

11. Sahagún's Spanish text suggests that the thigh bone was thus suspended. Seler, in *Einige Kapitel*, p. 81, has "trophy."

12. *Gefangenenerfisch*, in *ibid.*

Twenty-third Chapter, which telleth of the feast day and of the honors which they performed during all the days of the fourth month, which was known as Uey toçoztli.¹

This [feast of] Uey toçoztli was thus celebrated: to begin with, for four days there was fasting in each person's home. [There] the young men set up the sedges, covered with blood, bloodied, sprinkled with blood, everywhere [in the houses].

They arranged them all in rows in each one's house. They offered the sedges,² erected them, set them up carefully before their gods. They injured the [white] bases, they bruised them, they cut the bases; there they rubbed in the blood.³

And any young man, quite of his own will, drew blood from his shanks or from his ears.

And where there were riches, where there was prosperity, in the houses of the lords, the leaders, the constables, the merchants, [the youths] laid out a bed of fir branches⁴ for the sedge. There were balls of grass with designs, with the edges interlaced. In the middle of these they placed maguey thorns;⁵ these they set [on the balls of grass]. They also were bloodied, sprinkled with blood. It was at eventide, when still a little sun [shone], when the sun had not yet entered his house, that they made their offerings.

And at night the women made *atole*, perchance a thick, white *atole*,⁶ or an *atole* made of a dough of maize softened with lime, or a fruit *atole*. This *atole* was known as *aquetzalli*.

Thereupon they each swept their *calpulcos*. And when they had swept, then they poured the *atole* into various gourd vessels.

Indeed it spread shining,⁷ it spread scintillating; it

1. Great Vigil (*Gran Velada*), according to Garibay ("Relación breve," p. 296). Durán (*Historia*, Vol. II, pp. 273, 276) refers to Uey toçoztli as *gran punzada* and to Toçoztontli as "*punzadurilla pequeña . . . cosilla pasada con alguna cosa de una parte á otra.*"

2. In the *Real Palacio* MS the text reads *tolpatlactli*. For a description see Dibble and Anderson, *Book XI*, p. 195, where it is identified as *Cyperus* sp.

3. Corresponding Spanish text: "*ensangrentada, la parte de abaxo, donde tiene la blâcura, con sangre de las orejas, o de las piernas.*"

4. *caxcoiatema* (der. *acxoyatl* and *tema*): Garibay equates *acxoyatl* with *oyameitl* in Sahagún, Garibay ed., Vol. IV, p. 320. See the description of *oyameitl* in Dibble and Anderson, *Book XI*, p. 107, where it is identified as *Abies religiosa* (H. B. K.) Schlecht and Cham. In the corresponding Spanish text, Sahagún gives: "*unos ramos que se llaman acxoyatl.*"

5. Sahagún consistently translates *vitzli* as "*punta de maguey.*" *Meil* (maguey) is the "generic term for agaves and other plants of similar appearance"; *Agave atrovirens* Karw. is the most important species (Robert L. Dressler, "The Pre-Columbian Cultivated Plants of Mexico," *Botanical Museum Leaflets*, Harvard University, Vol. 16, No. 6, 1953, p. 120).

6. *quauhnextolli*: Sahagún, Garibay ed., Vol. II, p. 307: "*quauhnextolli, que es hecho con harina muy espesa y muy blanca, hecho con tequixquilt.*" Seler, *Einige Kapitel*, p. 84, specifies that the grains of maize were "*mit Pottasche gekochten.*"

7. The *Real Palacio* MS adds *pepexōtmani*—it spread filled to the brim.

was gleaming with heat; its vapor diffused. And when it had cooled, when it was cold, when it had thickened, when it lay in place, it spread contracting, it spread quivering.

And when day broke, the young men [and] the priests walked everywhere; they walked to all places; they went from one dwelling to another; they went taking all the roads to the houses. Also the priests recognized only their own offering-places. One might not join in, when the gifts were made, when they asked alms.

But if they met one another, if they joined in, there was ill-feeling over it, there was dislike because of it, there was continued wrangling over it.

The youths took [their gifts] to the young men's house; there they sampled them.

And the priests carried [theirs] to the *calmecacs*.

Then they departed to their fields,⁸ to get Cinteotl. In as many places as lay their fields, from each field, from each they went to take a stalk of green maize.⁹

And from the cleared fields they took only large maguey roots.¹⁰ They carried them hence to their homes.

They decked their maize gods with flowers; they set them up in each *calpulco*. Then they arrayed them; they laid offerings for them.

And before them they laid out five fast foods; they laid them in a basket. And upon it went standing a hard-baked frog — hard, stiff,¹¹ its face painted blue, a woman's skirt about its hind quarters. And they laid down a basket of pinole with beans [and] toasted maize.

And they cut a section of reed; there they filled it, they crammed it with everything [which] lay before Cinteotl. They took a very little, a small amount, a tiny bit from everywhere. They let the frog carry it on its back.¹²

And when this was done, it was called *calonoac*, "there hath been resting in the houses," because it was only in the houses, only in each person's house, that honors were paid the maize gods.

And after sundown they left each of [the foods] there at Cinteopan, the Temple of Chicome coatl.

8. *ompepeva* in *Real Palacio MS*.

9. "cañas de mabiz" in corresponding Spanish text. Garibay ("Relación breve," p. 296) translates the term as *mata de maíz*; Molina, *Vocabulario*, as "porreta o mata de mayz antes de q̃ espigue."

10. "otras yeruas, que llamauan mecoatl" in corresponding Spanish text. Orozco y Berra, *Historia antigua*, Vol. I, p. 330, referring to the maguey, says: "Las raíces gruesas mecoatl, servían de jabón."

11. Corresponding Spanish text: "ponjan comida delante del, desta ymagen, cinco chiquijutes, con sus tortillas: y encima de cada chiquijutl, vna rana asada, de cierta manera guisada."

12. Corresponding Spanish text: "ponjan aquel cañuto sobre las espaldas de la rana, como que le lleva a cuestas."

There they pilfered them. There was merry-making over it; there was the taking of a belligerent attitude by each one; there was striking, there was whacking.¹³ It was said: "There is the scattering of people like seeds."

And furthermore, they bore to Cinteopan, the Temple of Chicome coatl, the maize which was to be seed. They had young girls carry it on their backs.

Some [of the girls] had a long lock of hair on one side,¹⁴ some had long hair, some already had hair wound about the head.¹⁵ They bound the cobs of maize in groups of seven; these were the clusters [of cobs of maize]. They wrapped them in paper which was reddened; they painted them with liquid rubber; and they sprinkled on them drops of liquid rubber.

And they pasted the young girls' arms and legs with red feathers, and they painted their faces; on each they stuck two [circles] of tar, which were flecked with iron pyrites.¹⁶ On both sides, on their cheeks, they had iron pyrites.

Thereupon they accompanied the young girls as they carried on their backs the dried maize, also called Cinteotl. They went going before them; they went scattering them; they went surrounding them. All faces were toward them. [But] no one might look at them, look at any one of them; no one joked with them.

And if someone joked with one of them, they chid him. One said to him:

"He with the occipital tuft of hair can speak! Canst thou talk? Be thou already concerned over how thy tuft of hair will fall off, thou with the little tuft of hair.¹⁷ It is an evil-smelling tuft of hair, it is a stinking tuft of hair. Art thou not just a woman like me? Nowhere hath thy excrement been burned!"¹⁸

Some turned on her; they said:

"It is well. I am just going. I know. It is not true; it is not like that. Thou hast conferred a favor. So also wilt thou be. Anoint thy stomach with mud;

18. Corresponding Spanish text: "ian muger eres como yo, nunca has salido detras del huego." Seler, *Einige Kapitel*, p. 87, n. 2, suggests that this may refer to a puberty ceremony.

scratch thy stomach; twist one leg about the other; [fall] striking thyself on the ground; fall stinking on the ground. There is a stone, a hard stone; strike thy face with the stone, strike thy face with it; make the blood spurt forth. Scratch thy nose with the stone, or bore a hole with a fire drill into thy wind-pipe; thou wilt spit [through] there. Just go away; just be an old maid."

But although the words of us men were like this, they were verily only vain, they were verily only weak words. For verily thus the women could torment [young men] into war; thus they moved them; thus the women could prod them into battle.

Indeed we men said:

"Bloody, painful are the words of the women; bloody, penetrating are women's words. Indeed we have gone; we have said that we shall not live. Perhaps we shall merit something, O our friend."

And when [the young girls] went carrying upon their backs the maize gods, as they took them to the Temple of Chicome coatl, [the ears of maize] were made hearts. They became their granary hearts. They laid them in the granary.¹⁹

And when the seed was sown, when it was the time for planting, this they sowed. They made seed of it; they scattered it as seed.

And they established, they celebrated this feast for Chicome coatl.

They formed her image as a woman. They said: "Yea, verily, this one is our sustenance"; that is to say, indeed truly she is our flesh, our livelihood; through her we live; she is our strength. If she were not, we should indeed die of hunger.

For he who eateth no tortillas indeed then fainteth; he falleth down: he droppeth quickly; there is a twittering as of birds in his ears; darkness descendeth upon him.

And, it was said, it was indeed this Chicome coatl who made all our food — white maize, yellow maize, green maize shoots,²⁰ black maize, black and brown mixed, variously hued; large and wide; round and ball-like; slender maize, thin; long maize; speckled red and white maize as if striped with blood, painted with blood — then the coarse, brown maize (its appearance is as if tawny); popcorn; the after-fruit; double ears; rough ears; and maturing green maize; the small ears of maize beside the main ear; the ripened green maize.

20. For a description of the varieties of maize, beans, amaranth, and chia listed, see Dibble and Anderson, *Book XI*, pp. 279–87.

Then the beans — white beans, yellow beans, red beans, quail-colored beans, black beans, flesh-colored beans, fat red beans, wild beans; amaranth, the variety of amaranth called *cocotl*, fine red amaranth seed, [common] red amaranth, black amaranth, bright red or chili-red amaranth, fish amaranth [*mi-chiuauhtli* or *chicalotl*], brilliant black amaranth seed; the bird-seed called *petzicatl*.

And also *chía* — white *chía*, black *chía*, wrinkled *chía*.

All these things, so they say, all of them they offered to [the goddess]. When it was her feast day they gave her human form; they laid all before her. The old men, those in charge of the *calpulli*, sang for her; they beheaded quail for her.

And her adornment [was thus]: she was anointed all in red — completely red on her arms, her legs, her face. All her paper crown was covered completely with red ochre; her embroidered shift also was red; her skirt was a bed covering. The ruler's shield was painted with designs, embellished in red. She was carrying her double ear of maize in either hand.

Thus ended [the festival of] Uey toçoztli, and thus ended, thus passed the vigil songs. And this was the time that there began the winding dance, the dance with song. It ended there at the time of [the feast of] Toxcatl.

Sixth [Twenty-fourth] Chapter, which relateth the feast and the debt-paying which was celebrated during all the days of the fifth month, which was called Toxcatl.¹

In the time of Toxcatl there was Tezcatlipoca's great festival. At that time he was given human form; at that time he was set up. Wherefore died his impersonator, who for one year had lived [as Tezcatlipoca].

And at that time was appointed his [new] impersonator, who would again live [as Tezcatlipoca] for a year.

For many impersonators were living, whom stewards in various places guarded; whom they maintained. About ten [so] lived. These were indeed selected captives; they were selected when captives were taken. There one was chosen if he was seen to be suitable, if he was fair of body. Then he was taken. They entrusted these to stewards. But one destined to be a slave, him the captor slew.

Indeed he who was thus chosen was of fair countenance, of good understanding, quick, of clean body, slender, reed-like, long and thin, like a stout cane, like a stone column all over, not of overfed body, not corpulent, nor very small, nor exceedingly tall.

Indeed it became his defect if someone were exceedingly tall. The women said to him "Tall fellow; tree-shaker; star-gatherer." He who was chosen as impersonator was without defects.

He was like something smoothed, like a tomato, like a pebble, as if sculptured in wood; he was not curly-haired, curly-headed; his hair was indeed straight, his hair was long. He was not rough of

1. Of this name, Orozco y Berra, *Historia antigua*, Vol. II, p. 37, writes: "Toxcatl, Tepopochuiliztli. De todas las interpretaciones dadas a la palabra toxcatl, la más genuina, a nuestro entender, es la dada por Gama, tomada del P. Acosta: 'una sogá gruesa torcida de sartaes de maíz tostado.'"

Clavijero, *Historia antigua*, Vol. III, p. 402, explains that "La figura del mes quinto es la de una cabeza humana con una cadena debajo, para representar aquellas sartaes de maíz tostado que se ponían al cuello, y con las cuales adornaban también al ídolo de Tezcatlipoca, por lo que el mes tomó el nombre Toxcatl"; and (p. 152) "unos sacerdotes teñidos de negro y vestidos del traje del ídolo, lo bajaban en unas andas bien aderezadas al pie de la escalera. Los mancebos y vírgenes del templo rodeaban las andas de una cuerda gruesa compuesta de sartaes de maíz tostado y ponían al ídolo una sarta al cuello y una guirnalda en la cabeza. A esta cuerda por ser de granos secos y símbolo de la sequedad que pretendían evitar con sus plegarias, llamaron toxcatl, el cual nombre se dió por esta ceremonia al mes quinto de que hablamos."

Garibay ("Relación breve," p. 298) also suggests as a translation for the name "our dryness, our drought" — "nuestra sequera."

Jiménez Moreno, "Primeros memoriales," p. 31, notes: "Precisamente se llevaban collares de maíz tostado (de allí quizá la idea de 'cosa seca') en esta fiesta Tózcalt, pues podría aquí significar lo mismo que cózcalt (collar). Pero, siendo ésta fiesta de Tezcatlipoca no es improbable que se tenga Tózcalt como posible forma arcaica de Tézcalt ('espejo' y en ocasiones 'laguna'). En el castellano de México, un espejo se llama también 'luna' y no debe olvidarse que Tezcatlipoca era un dios lunar."

forehead; he had no pimples on his forehead; he did not have a forehead like a tomato; he did not have a baglike forehead. wrinkled stomach; he was not of shrunken stomach. He was not cringing; he was not of hatchet-shaped buttocks; he was not of flabby buttocks; he was not of flabby thighs.

For him who was thus, who had no flaw, who had no [bodily] defects, who had no blemish, who had no mark, who had on him no wart, [no such] small tumor, there was taken the greatest care that he be taught to blow the flute, that he be able to play his whistle; and that at the same time he hold all his flowers and his smoking tube.⁴ At the same time he would go playing the flute, he would go sucking [the smoking tube], he would go smelling [the flowers].

So [his flute], his flowers, his smoking tube went together when he followed the road.

And while yet he lived, while yet he was being trained in the home of the steward, before he appeared [in the presence of the people], very great care was taken that he should be very circumspect in his discourse, that he talk graciously, that he greet people agreeably on the road if he met anyone.

For he was indeed much honored when he appeared, when already he was an impersonator. Since he impersonated Titlacauan, he was indeed regarded as our lord. There was the assigning of lordship; he was importuned; he was sighed for; there was bowing before him; the commoners performed the earth-eating ceremony before him.

And if they saw that already his body fattened a little, they made him take brine; with it they thinned him; they thinned him with salt. Thus he became thin; he became firm; his body became hard.

And for one year he [thus] lived; at the time of Toxcatl he appeared [before the people], and at that time died the man who had been impersonator for one year, who had been led along the road, who had waited for one year, who had [thus] passed one year. Just then he went being substituted; one was set in his place [from among] all whom the various stewards were guarding, were maintaining, at the time that [the first impersonator] appeared [before the people].

Thereupon he began his office. He went about playing the flute. By day and by night he followed whatever way he wished.

His eight servitors went following him. Four [of them] had fasted for a year. Their hair was shorn

4. "Caña o cañuto de çabumerio, acaietl," in Molina, *Vocabulario*; "cañas de humo" in Sahagún's corresponding Spanish.

as if they were one's pages; their hair was cut; their hair was clipped; they were not clipped smooth like a gourd; they were not clipped bald like a gourd; their heads were not smooth like pots; they did not stick [hair] to the head.

And also there were four constables, masters of youths. They cut their hair similarly; their hair arrangement was similar. It was arranged upright for them on their foreheads.

At this time Moctezuma adorned [the impersonator]; he repeatedly adorned him; he gave him gifts; he arrayed him; he arrayed him with great pomp. He had all costly things placed on him, for verily he took him to be his beloved god. [The impersonator] fasted; hence it was said: "He fasteth in black," [for] he went with his face smoke-black. His head was pasted with feathers, with eagle down. They only covered his hair for him; it fell to his loins.

And when he was attired, he went about with popcorn flowers⁵ laid upon his head; they were his crown of flowers. And he was dressed in these same on both sides; they drew them out to his armpits. This was called "the flowery stole."

And from his ears on both sides went hanging curved golden shell pendants.⁶ And they fitted [his ears with] ear plugs made of turquoise, turquoise mosaic. And a shell necklace was his necklace. Moreover, his breast ornament was of white seashells.

And then his lip pendant, his slender lip pendant, was of snail shell. And down his back went hanging what was like a cord bag called *icpatoxin*.⁷

Then on both sides, on his upper arms, he placed golden bracelets, and on both sides, on his wrists, he went placing turquoise bracelets taking up almost all his forearms. And he went putting on only his net cape like a fish net of wide mesh with a fringe of brown cotton thread.⁸ And his costly breechclout reached to the calves of his legs.

And then he went placing his bells on both sides, on his legs. All gold were the bells, called *oyoalli*.⁹ These [he wore] because they went jingling, because they went ringing; so did they resound. And his

5. *Beureria huaniia* Hemsley, according to Seler, *Einige Kapitel*, p. 97, n. 1. Cf. also Dibble and Anderson, *Book XI*, p. 202.

6. Corresponding Spanish text: "*como çerçillos de oro*."

7. Corresponding Spanish text: "*lleuaua a las espaldas, un ornamento como bolsa, de un palmo en quadro de lienço blanco, con sus borlas y flocadura*."

8. Cf. Sahagún, Garibay ed., Vol. II, p. 311. In the corresponding Spanish text, Sahagún refers to *tochomjtl* (rabbit fur), we think mistakenly. *Tochiacatl* (or *tochacatl*), it would appear, is string or thread, while *tochomjtl* is a thong of rabbit skin.

9. *oyoalli* (*oyoualli*) can be translated as bell or shell rattle. It is also the name of a shell neck pendant worn by the gods of dance. We follow the corresponding Spanish in our translation.

obsidian sandals had ocelot skin ears. Thus was arrayed he who died after one year.

When Toxcatl went drawing near, when it approached him, when already it went reaching him, first he married; he looked upon a woman; he was married at the time of Uey toçoztli.

And he shed, he put in various places, he abandoned what had been his ornaments in which he had walked about fasting in black. His hair was shorn; he was provided a tuft of hair upon his forehead, like that of a seasoned warrior. They bound it; they wound it round and round. They bound it with [brown cotton thread] called *tochyacatl*; it was tied with a slipknot. And his forked heron feather ornament with a quetzal feather spray they bound to his warrior's hairdressing.¹⁰

It was for only twenty days that he lived lying with the women, that he lived married to them. The four women in whose company he lived had also lived for a year guarded in the steward's establishment.

The name of the first one was Xochiquetzal; the second was Xilonen; the third was Atlatonan; the fourth was Uixtociuatl.

And when it was already the eve of [the feast of] Toxcatl, still five [days] from it, on the fifth day [from it], five days before the feast of Toxcatl would pass, they began each to sing [and dance].

At this time, in all these days, one knew nothing more of Moctezuma. They who yet had been his companions provided people with food, provided people with favors.¹¹

On the first day they sang [and danced] at a place called Tecanman. On the second day it was in the place where was guarded the image of Titlacauan, in the home of him who was the steward who guarded it. On the third day it was at Tepetzinco, in the middle of the lagoon. The fourth time it was at Tepepulco, which is also quite near Tepetzinco.

When they had sung [and danced], thereupon he embarked in a boat. The women went, going with him. They went consoling him; they went encouraging him. The boat proceeded to a place called Aca-

10. *itzotzocolli*: this warrior's hairdress protrudes over the forehead.

Seler, in *Gesammelte Abhandlungen*, Vol. I, p. 208, states: "Bei der andern Frisur wurde das Haar über der Stirn hoch in die Höhe gezaust und vom Scheitel ab lang herabfallen gelassen und dort am Nacken mit einem Riemen umwickelt, in den bei festlichen Gelegenheiten ein Federschmuck eingesteckt wurde." In Vol. II, p. 521, Seler adds that this hairstyle is adopted by the young warrior after his first military exploit.

11. Corresponding Spanish text: "el señor se quedava solo en su casa, y todos los de la corte, les seguian, y se bazian solemnnes banquetes, y areytos, con muy ricos ataujos."

quilpan or Caualtepec; there it proceeded to the shore; there it landed them.

For here they were left, rather near Tlapitzauhcan. The women then returned. And only they who for the time had become [and] were his servitors went following him while yet he lived.

Thus was it said: when he arrived where [the impersonators of Titlacauan] used to die, [where] a small temple called Tlacochealco stood, he ascended by himself, he went up of his own free will, to where he was to die. As he was taken up a step, as he passed one [step], there he broke, he shattered his flute, his whistle, etc.

And when he had mounted all the steps, when he had risen to the summit, then the offering priests seized him. They threw him upon his back on the sacrificial stone; then [one of them] cut open his breast; he took his heart from him; he also raised it in dedication to the sun.

For in this manner were all [these] captives slain. But his body they did not roll down; rather, they lowered it. Four men carried it.

And his severed head they strung on the skull rack. Thus he was brought to an end in the adornment in which he died. Thus his life there ended; there they terminated his life when he went to die there at Tlapitzauayan.

And this betokened our life on earth. For he who rejoiced, who possessed riches, who sought, who esteemed our lord's sweetness, his fragrance — richness, prosperity — thus ended in great misery. Indeed it was said: "No one on earth went exhausting happiness, riches, wealth."¹²

And here in Mexico, at the time of Toxcatl, there was made, there was made in human form, [a figure of] Uitzilopochtli here at the Temple of Uitznauac, in its *calpulco*. They set it on the serpent bench.

This serpent bench was hewn of wood as if of serpents. Four lay supported by their tails; their heads were on the four sides.¹³

They kept covering [Uitzilopochtli's] mesquite wood members with fish amaranth dough; his figure was indeed always hewn¹⁴ of mesquite wood, which they covered.

14. *tlaxintli*: *tlaxixintli* in the *Real Palacio MS*.

Thereupon they gave him his various articles of raiment; they put on him his sleeveless jacket painted with representations of human limbs.

And over that they covered it,¹⁵ over that they clothed it in a cape of nettles. It was like a netted cape.

And they fitted on him his paper headdress, made with feathers, called *anecuyotl*. Above his feather headdress stood a flint knife, also made of feathers, half of it blood-colored.

Then they dressed him in a godly cape. It was costly; it was all made, embellished, designed with precious feathers; it was provided with the red-eye border; its edge was quite all of roseate spoonbill [feathers]. And in its center lay a large golden disc.

And his bones were made of fish amaranth dough, shaped like cylinders. They were called *teomimilli*. They laid each one before him; they lay reaching high; they were hip-high.

And the cape with which they lay covered, which lay spread before him, was designed with severed heads, the palms of hands, hip bones, ribs, tibias, lower arm bones, footprints. With them it was painted.

And this cape was called *tlacquaqualo*.

And yet one more thing they spread out for him; they spread out what was named the sacred roll. In this form it was said to be his breechclout.

And this was a paper, white paper, not yellow paper,¹⁶ a finger thick, a fathom wide, and twenty fathoms long.¹⁷

With godly arrows, cut at the tip — darts — they supported it. They were made only that they might support it; that his breechclout might be supported.

In three places were they plumed with white turkey feathers; first on their points, second on their shafts, third there on their stems.

When they had ornamented [the figure of Uitzil-opochtli], the young seasoned warriors, the masters of the youths, the youths took it up. His breechclout went laid out before him, went spread out before him. They went in procession; they went dancing [and singing].

15. *cononoloo*: read *conololoo* as in *ibid*.

16. Cf. V. W. von Hagen, *The Aztec and Maya Paper Makers* (New York: J. J. Augustin, 1944), pp. 60, 72 esp. In *Gesammelte Abhandlungen*, Vol. II, p. 656, a note by Seler states: "Quauhamatl ou texamatl est la matière fournie par la couche libérienne de quelques arbres du genre *Ficus*. Il servait de papier pour les peintures ou les livres, et d'étoffe pour faire les parures, les vêtements et autres objets que le culte des dieux nécessitait."

When they brought it to the foot of the temple, when already they carried it up, at the four [corners] cords had been tied by which they might take it up, by which they might carry it up. They went stretching [the cords] so that it would not twist.

Thereupon they began to climb. They went rolling the breechclout up; they went reeling it; they reeled it; they went reeling it up.

They went throwing aside the godly arrows. Those whose task it was went taking them, went gathering them, went collecting them.

And when they had risen to the top, when they had raised [the figure of Uitzilopochtli] to the summit, thereupon they placed [the paper roll] upon the serpent bench. They placed it before him. They bound it to [the serpent bench]; they bound it tightly, they bound it firmly.

When they had gone to place it [there], then they descended. There those who had tasks, the offering priests, the stewards who guarded it were left.

Then all the people came down.

And this came to pass, that they went up in the evening when there was still a little sun. And also in the evening an offering was made.

And the tamales which they ate were fruit tamales, [which] were chili-red, or tamales made of maize softened with lime, or bean and cornmeal cakes,¹⁸ colored tamales, tamales of coarse white flour, and [tamales] rolled up in amaranth seed dough.

These cylindrical tamales wrapped up in amaranth seed dough were the tamales they distributed at the temple.

And when it dawned, thereupon offerings were made in each one's home; only some made offerings before the devil [Uitzilopochtli].

And quail were beheaded. Everyone — women, men — [did so].

Moctezuma began [the offering]. He himself, with his own hands, beheaded four quail.

And the fire priest beheaded still other quail; he only laid his hands on them.¹⁹

Thereupon the commoners broke out; they threw themselves [into it] together. Everyone, men [and] women, beheaded quail.

And when the quail were beheaded, they cast them toward [the figure of] Uitzilopochtli; they threw them toward it.

18. Alvaro Tezozomoc, *Histoire du Mexique*, trans. H. Ternaux-Compans, 2 vols. (Paris: P. Jannet, 1853), Vol. I, p. 269, has, for *quatequicuĩtamalli*, bean and cornmeal cakes with bird or other meat.

19. Seler, *Einige Kapitel*, p. 104, suggests that the priest merely touched them to behead them symbolically.

And the quail, when their necks were wrung, went fluttering away; they went thrashing; they went striking the earth; they kept throwing themselves to the earth.

And the masters of the youths took them up, gathered them up, plucked them,²⁰ roasted them, salted them; they cured them in brine.

Some they destined for Moctezuma, and the rest they destined for his officials — only the noblemen — and also for the masters of the youths, those who were leaders; also those who were offering priests.

And all took their large braziers — not their polished braziers. In them were coals and wood shavings. They heaped them up; they set them on fire; they made them take fire; they fired them with pine splinters. There they burned exceedingly.

And they took white incense and coarse incense.²¹ And when already it was the proper time that already incense be offered, they laid coals in the incense ladle; on it they cast the white incense. With this they raised it in dedication to Uitzilopochtli.

Thus they warmed him, thus they incensed him not only there at the great temple but also furthermore in each one's home, in each one's *calpulco*. Incense was offered to all of their gods in whom they believed.

And after they had dedicated the fire [and incense to the gods], thereupon they cast [the coals] into the hearth [in the courtyard].

And the women, the maidens painted their faces; they pasted themselves with red feathers.

And they fastened their sacrificial paper streamers firmly to canes. [The streamers] were painted in black in what was called a scroll design.

And the rich [women and girls] thus fastened thin cotton blankets [to canes] likewise painted with a scroll design.

And two masters of youths who had spread black paint on their faces stood above, before the hearth. They stood in the leading position. They carried on their backs pine wood cages with small paper banners, only they carried them [with tumplines which crossed] the chest.

They began the dancing for the women. In this manner was the dance: they danced leaping; they danced just in the fashion of women. And the

women were in the middle; they held their sacrificial paper streamers in both hands. They were dancing; they were leaping about. And the offering priests also danced. It was said: "They make the Toxcatl-leap."²²

There were conical paper rosettes fastened upon [the priests'] foreheads; they had conical paper rosettes fastened to their foreheads. They decked their heads with white turkey feathers. And they smeared honey on their lips; their lips went gleaming. They had paper breechcloths. And their various grackle-staves had grackle feathers;²³ they were like their cups, and their round balls at the base were likewise of grackle feathers. The grackle-staves were also called their thrasher[-staves].²⁴

And where they went grasping [the staves] were papers painted with scroll designs. And these [priests], as they danced, went in procession. They went striking their grackle-staves [on the ground].

And only in the *calpulcos* were those who beat the drum for them. They were only seated. They beat only the upright drums; they sat rattling gourd rattles; they sat erecting gourd rattles; they beat turtle shells; they struck turtle shells; they sat using turtle shells.

And all the masters of the youths, the young seasoned warriors, and the youths were spread out elsewhere as they danced what is called the serpent dance.

And hence it went being called the serpent dance. It was because they went back and forth, they went from side to side, they met one another face to face, they went holding one another's hands as they danced.

And also a number of women, maidens, danced. It was their vow. They danced the popcorn dance. As thick as tassels of maize were their popcorn garlands. And these they went placing on [the girls'] heads. They were painted. And to the thickness of their thighs reached where they were pasted with feathers; and it reached up to their shoulders. And they went with those who danced; they went mingling with them.

Of these it was said that they embraced; they embraced one; they embraced Uitzilopochtli.

And these maidens were very well guarded, that one might not covet them, that one might not joke with them.

And all who danced the serpent dance were well guarded, that none might fall into covetousness.

And if any were seen joking with one [of the maidens], then the masters of the youths struck him to the ground. They dragged them; they kicked them; they stepped on them.

Because they punished them indeed in the temple; they indeed had done wrong. They said to them: "Indeed there penance is done; there a feast day is celebrated."

So night fell as there was dancing. Thus the feast day ended when the day came to an end.

And next morning, when [the feast day] was over, there also was dancing; there was also dancing of the serpent dance.

And at this time died Ixteucalc, he who had lived together with Titlacauan. And him also they named Tlacauepan and Teicauhtzin.

And his paper raiment was painted with black discs. His paper headdress had eagle feathers. His headdress was in disorder. Over the middle of his forehead a flint knife made of feathers was standing.

And also he had his cape of netting; over it there went hanging a small net bag, and his mantle went hanging from his arm. It was of the skin of a wild beast.²⁵ He went fastening [golden] bells [to his legs]. He danced with the others; he danced the serpent dance. He went erect at the head of the others.

And it was purely of his own will when he was to die. When he was to wish it, when he wished it, thereupon he delivered himself into the hands of those where he was to die.

Offering priests called *tlatlacanaualti* seized him, stretched him out [on the sacrificial stone], held him, cut open his breast. His heart they held up in dedication to the sun.

And his severed head also they strung up on the skull rack. In the same way he came to his end, even as Titlacauan, [whose head] was strung up [on the skull rack].

And just at this time the offering priests cut the skin on people; [with a stone knife] they cut the skin of youths, of young boys, and even verily small

Twenty-fifth Chapter, which telleth of the feast and of their offerings which they made during all the days of the sixth month, which was called Etzalqualiztli.¹

Etzalqualiztli. Before the arrival of this feast, at the time when it was celebrated, first the offering priests fasted for Tlaloc. For four days,² before their fasting began, first they gathered reeds there at Citlaltepec. For indeed at that place were formed very long reeds called *aztapilin* or *tolmimilli*³ — very long, very high, and very white at the base; and rounded, like a stone column.

And there where they gathered them, at a place in the water called Temilco [or] Tepexic oztoc, they plucked them by their white ends.

And when they had gathered them, thereupon they arranged them, they tied them together at the base in groups; they wrapped them up; they wrapped the groups of reeds up.

Thereupon they used the tumplines; they each used a tumpline. Then there was their carrying on their backs; there was carrying of the burdens upon their backs; there was the carrying of the burdens upon their backs [with the tumpline across] their foreheads. Thereupon they left; there was departing; there was coming to go. None carried [the reeds] crosswise upon his back; they only all departed carrying them on their backs.

And when the offering priests went to gather the reeds, and as they returned, the road [which they followed] remained deserted. No others took it; travelers followed it no more.

And if they came upon any men, they there then despoiled them of their possessions, they robbed them, they took all from them, they made them drop their possessions. And if they defended themselves, then [the priests] abused them; they threw them flat on the ground, they stepped on each of them,

1. Sahagún (Garibay ed., Vol. I, p. 116) says: "*bacían una manera de puchas, o poleadas que se llama etzalli*"; and in *ibid.*, p. 166: "*este etzalli era hecho de maíz cocido, a manera de arroz, y era muy amarillo*." Durán, *Historia*, Vol. II, p. 210, defines *etzalli* as boiled corn and beans. In "Relación breve," p. 298, Garibay has "*Comida de manjar de frijoles*."

2. The Real Palacio MS varies as follows: "*ynin ylbuiltl ypã y quiçaya. mallactli omome metztli mayo. auh yn ayamo onaxiva. yn ipã ylbuiltl. achtopa motlalocaçaraya. yn tlamacazque navilbuiltl*." Seler, *Einige Kapitel*, pp. 112–13, translates: "*Dieses Fest fiel auf den 12. Mai. Und ebe man an das Fest kam, fasteten die Priester zu Ehren Tlalocs vier Tage*."

3. In the Spanish text, Sahagún translates *aztapilpetlail* as "*petates jaspeados, de juncias blancas, y verdes*." In Dibble and Anderson, *Book XI*, p. 195, *tolmimilli* is identified as *Cyperus* sp., and the description says that the name of its white base is *aztapilli* or *oztopilli*.

they kicked each of them, they leapt upon each of them, they beat the ground with each of them, they scattered them like so many surveyor's cords,⁴ they made them cry out, they beat them repeatedly, they beat their backs repeatedly, they beat the skin off of them, they straightened their backs.⁵

And when they had each been robbed, when they had each been stripped, they there only turned back, they only went back there to their homes.

And indeed if they took the very tribute, Moctezuma was not wrathful therefor. For they [who robbed] were penitents. He esteemed them; he gave them protection; he revered them because they were offering priests, because they did penance; they laid offerings before [the gods]. For they were offering priests.

And when they had come reaching [the temple], when they had gone bringing the white reeds, thereupon were pierced and strung together the white reeds. They fashioned green and white reed mats,⁶ and they bound the reeds; they made reed seats, and they made reed seats with backs for one to rest on. In the same manner green and white reed seats with backs were fashioned of white reeds.

Thereupon they somewhat bound the reeds, the thin reeds, at their midpoints. And when they had bound them at their midpoints, thereupon they were arranged in order; on the ground they went bound, they went tightly bound with maguey roots, with maguey fibers.

And when this was done, when already the fasting in honor of Tlaloc was to begin, when night fell, then the offering priests crowded themselves into the houses [of the *calmecac*]; there was crowding into the houses — the warrior offering priests [who had taken three or four captives], and the offering priests [who had captured only one];⁷ then the offering priests who were singers, who beat [the drums]; then all the lesser offering priests, and those who were still children, the novices, the little offering priests.

And when this had come to pass, then were spread out before the hearth the white and green reed mats, the white and green reed beds.

And when they had stretched out the white and

4. *quĩtlatlalmecamayavi* in the *Real Palacio MS*.

5. *quĩcuĩtlamemelabua* in *ibid*.

6. In the corresponding Spanish text Sahagún states that the reeds were alternated: "*luego las cosian, y componjan, contrapuestas, y entrepuesto, lo blanco a lo uerde: a manera de mantas pintadas.*"

7. The number of captives is given in the corresponding Spanish text.

green reed mats, then the fire priest ornamented himself. He put on his sleeveless jacket, and on his left arm he placed [the maniple] called *matacaxtli*.⁸

And with it he took the incense bag, and [in his right hand] he took his incense ladle. Thereupon he offered incense. He stood forth at the entrance; he stood forth in the courtyard.

The fire priest raised⁹ it to the four directions. And when this was done, he cast the coals into the brazier. He then went in; he sat before the hearth.

There in his turn he laid down four offering-balls of dough made of maize. Very cautiously, very gently, very warily he placed them. If he made one of them roll, they seized him because of it; he was seized because of it. The offering priests said unto him:

"We offering priests have detained thee, for thou hast rolled it."

And the fire priest then went within. Then he sat down; he undid, he removed [his adornment]. Then all the offering priests came forward; each one in turn was setting in place the offering-balls of dough.

And some left four large tomatoes, or else small ones,¹⁰ and some spread out four green chilis.¹¹

Very well were they watched; closely were they watched; closely were they continually watched in case perchance someone might roll something, in case he might move something, in case perchance someone might displace something with his hand, in case perchance someone might knock something with his hand. And if someone rolled something, they detained him, they discovered him, they marked him.

And if they noted on one a little dirt, or a cobweb, or a small piece of cotton perchance on his head, perchance on his cape, they detained him because of it; they marked him. Perchance he stumbled, he slipped, or he struck something. All [such] were detained.

For four days this was done, and four nights, that there was living with prudence.

8. *matacaxtli*: see Chapter 24, n. 25.

9. Sahagún (Garibay ed., Vol. I, p. 308) distinguishes three grades of priests — "tlamacazton (*que*) es como acólito; . . . tlamacazque, *que* es como diácono; . . . tlanamácac, *que* es como sacerdote. De estos sacerdotes los mejores elegían por sumos pontífices. . . ."

10. Francisco Hernández, *Historia de las Plantas de Nueva España*, 3 vols. (Mexico: Imprenta Universitaria, 1942-46), Vol. III, p. 699: ". . . son mayores que avellanas aunque menores que las nueces, están encerrados en una membrana a modo de vejiga, . . . y pasan del verde al amarillo o al púrpura. . . ." *Physalis* sp.?

11. *nanavi* in the *Real Palacio* MS.

And when this was done, then the old priests¹² took away [the offerings]. They took away for themselves what they required; they ate them. For four days they took for themselves the things which had been offerings.

And when midnight had not yet arrived, then shell trumpets were blown.¹³ And when they were blown,¹⁴ then there was the unclothing of each one and the cutting of maguey spines and the piercing of the ears. Thereupon were the spines stained with blood, and there was the smearing [of the priests] with blood. And when this was done, then there was the arising [of all].

There was going; there was bathing; there was going blowing musical instruments; they went blowing shell trumpets. Whistles were blown.¹⁵

And all the offering priests each carried their tobacco bags on their backs, and had their cord necklets, each one his cord necklet from which went hanging their little tobacco bags, each of which went filled with dyed, powdered tobacco.¹⁶ And the fire priest went leading them. With him went his incense ladle; and his maguey thorns went with him. And, with them, he grasped his incense bag.

And leading them went a man, an old priest. He went bearing on his shoulders the mist rattle board, also called the sorcerer's staff. It was wide, very wide, excessively wide; and it was long, very long. And it rattled; he went along rattling it.

Not one remained in the *calmecac*. It went all cleaned out; it arose empty; the *calmecac* was empty.

And only four singers were left there. They sat singing, they sat beating the horizontal drum, they sat rattling the turtle shell rattle, they sat rattling the gourd rattle, they sat blowing the shell trumpet; they sat sounding the shell trumpet.

And when they went reaching the water's edge, the offering priests' bathing place, the mist houses were at the cardinal points. Thereupon there was stretching out of each one, there was their seating

12. In the corresponding Spanish text, Sahagún describes "unos viejos, que llamauan quaquacujltin: los quales trayan las caras teñidas de negro, irasquiladas: saluo en la corona de la cabeça, que tenja los cabellos largos, al reues de los clérigos."

13. *tlapitzza* means "to blow something" — a trumpet, flageolet, flute, or other wind instrument. We follow Sahagún's corresponding Spanish where designating specific instruments.

14. The Real Palacio MS text reads: "tlapitzalo auh yn ontlapitzaloc."

15. The Real Palacio MS reads *cohcouilloc chililitlī*. Seler, in *Einige Kapitel*, p. 117, translates this passage thus: "man bläst Muschelbörner und Tonpfeifen, auch solche in Gestalt von zwei Tauben." However, in *Gesammelte Abhandlungen*, Vol. II, p. 702, he states: "Neben ihnen wurden thönerne Pfeifen, chililitlī oder cohcouilloc genannt, viel gebraucht."

16. Corresponding Spanish text: "todos lleueuan a cuestras, unas taleguillas, atadas con unos cordeles de ichtili, con unas borlas al cabo: y de otras colgauan, unas tiras de papel pintadas, cosidas, con las mismas talegas, que llamauan yiequachili: y en aquellas talegas lleuauā una manera de barina, hecha a la manera de estiércol de ratones, que ellos llamauan yiaqualli, que era cõficionada con tinta, y con poluos de una yerua que ellos llaman yietl, que es como beleños de castilla."

themselves, there was trembling, there was shivering, there was quaking with cold, there was the chattering of teeth.

When this was done, then spoke the old man called the old precious stone priest; he said:

"[Behold] the place where the serpents are wrathful, the place where the water gnats buzz, the place where the ruddy ducks take off, the place where the white reeds rustle."

When he had said this, thereupon there was plunging into the water, there was going churning the water, there was going beating it with their hands, there was going beating it with their feet, there was going beating the water with their feet; they went shouting, they went twittering; they mimicked all the birds.

Some spoke like ducks; they hummed. Some mimicked gulls;¹⁷ they spoke like gulls. Some mimicked jabirus;¹⁸ they spoke like jabirus. Some spoke like white herons.¹⁹ Some spoke like little blue herons.²⁰ Some spoke like brown cranes.²¹

Where they bathed, in the midst of things were poles.²² For four days it was so done. And when this was done, then there was emerging from the water, there was ornamenting. Then there was returning; they went back. In just the same manner they went; they each went naked; they were naked.

And when they had reached [home], when they had each disposed themselves in the houses, thereupon were thrown down, were spread out the white and green mats everywhere in the *calmecac*.

Thereupon there was the wrapping up of each, there was the covering up of each. Then there was the stretching out of each upon the white and green mats. They were cold. There was lying as if dead. They lay cold. They lay sleepless. They sat hunched. They sat crouched. Some just lay sleepless, some slept continuously, some slept lightly, some dreamed, some talked in their sleep, some started up in their sleep. There was thundering, there was snoring, there was groaning, there was whimpering, there was [lying] twisted in sleep.

Later, at full noon, there was arising. And when

there had been arising, then the fire priest arrayed himself in order to offer incense, to burn it. He went everywhere, to all the temples; the old priests went ahead of him.

And when he had gone everywhere offering incense, thereupon food was eaten; there was eating. There was gathering around; there was grouping around. Severally they gave them their food, all kinds of sauce. For four days they only tasted it.

And if someone were to exchange his sauce with someone, they detained him because of it, they seized him because of it; he was seized because of it. And when food was eaten, no one let a drop of the sauce fall there on the ground where the sauce had been placed. If anyone spilt a little sauce, for all this he was detained; there was punishing.

And when this was done, when they had eaten, thereupon there was going to gather fir branches [or] reeds, green reeds.

And when there had been going forth, when there had been gathering, thereupon [the branches or reeds] were bound at their midpoints;²³ they were somewhat bound up. And when they had been bound at their midpoints, when already it was time that they be deposited, then there was breaking up, there was running, there was running by each one. They carried the reeds upon their shoulders.²⁴

Quickly they deposited each of them everywhere in each of the temples of the demons.

And if anyone were to stumble and fall, and if anyone went not there, if he strayed, for this he was detained.

And if anyone did not keep up, if he did not keep up with one, if anyone straggled, if he did not deposit reeds along with the others, they detained him because of it; there was confinement because of it.

And this was done for four days.

And for these four days he who was detained could yet be freed, could yet free himself, could yet escape in return for perhaps a turkey hen, for perchance a breechclout, perchance a cape, perchance a maguey fiber cape, perchance for a small manta.

And the poor, these freed themselves with balls of dough,²⁵ a wooden vessel [full].

25. "*bolillas de massa*" in Sahagún's Spanish text.

And [as for] all that by which one was freed, all this the captor, he who detained one, he who captured one, took.

But when it was already the fifth day, when it was already the feast day, no one could free himself; even if it were something very great in return for which he was to free himself, no longer did [the captor] accept it.

And when it was already the feast day, all the common folk made cooked maize and beans for themselves; they made *etzalli* for themselves. They fell to it as one. There was no one who did not prepare maize and beans for himself.

When they were cooked, then they were continually eaten; they continually presented it to one another; they continually invited one another to meals.

And some of the happy ones, the pleasure girls, and some of the brave warriors danced from time to time. Thus they just diverted themselves.

Thus were they adorned: they had circles about their eyes; they had their maize staves. They kept going to enter each one's home. They danced the *etzalli* dance. With them they went grasping a handled jar, the *etzalli* jar.

And as they kept on dancing they chanted: "When I do, when I do, [give me] a little of thy *etzalli*. If thou givest me none, I shall break a hole into thy house."

And the householders then gave them a pile of *etzalli*. They went placing it in the *etzalli* jar.

Those who kept on dancing gathered some in fives, some in sixes, some in sevens.

This *etzalli* dance began at midnight. Only when it was dawn was there dispersing, was it quiet.

And when the sun arose, then the fire priest adorned himself. He put on his sleeveless jacket;²⁶ over it he placed his [thin, transparent] netted cape, called the mist cape or the dew cape, adorned with [crossed] motmot feathers. Then he carried on his back the round paper rosette,²⁷ and he went placing a pleated paper neck ornament on the nape of his neck.²⁸

26. "una manta delgada trasparente, que se llama aiauhquemjtl" in the corresponding Spanish text. Elsewhere Sahagún mentions "mantas delgadas que llaman ayatl" (Sahagún, Garibay ed., Vol. IV, p. 49).

27. "una flor de papel grande rncida redonda, a manera de rodela" in the corresponding Spanish text. Later, in the same chapter, he describes the tlaquechpaniotl as "ornamento, que va sobre el pescuezo." In *Gesammelte Abhandlungen*, Vol. II, pp. 850, 851, 885, Seler refers to it as "die breite Nackenschleife" and adds: "am Nacken ist das tlaquechpanyotl, die Binde mit den breiten Schleifenenden aus gefälteltem Papier, angegeben die das Abzeichen der Berg-, Regen- und Wassergötter ist."

28. In *ibid.*, p. 487, "eine aus Papier geschnittene Imitation des Schöpfes, den man den Knaben, denen im Uebrigen das Hauptbaar rasirt wurde, am Hinterkopf stehen liess. Wir werden dasselbe Merkmal unten noch bei den Tepictoton, den Berggöttern, angegeben

And his forehead was painted blue; besides, he put iron pyrites on it; he sprinkled iron pyrites.

And with him he went grasping a paper incense bag, with shells attached, covered with seashells,²⁹ also known as a seashell incense bag. It went filled there with *yauhili*, with ground up *yauhili*.³⁰

And an old priest bore upon his shoulders the mist rattle board.

And a number of offering priests carried in their arms rubber molded like men, called rubber gods.

Some bore in their arms [pieces of] incense, quite round, conical [in shape]. On their points went erect quetzal feathers, called quetzal feather tassels.

And when this was done, when the trumpets were played, thereupon there was their placing in order on the road. Then there was departing.³¹

And as many as had been detained [for transgressions] they arranged, each one, in order; they grasped each one firmly; they took them each by the napes of their necks, they seized each one firmly by the head; some they grasped, each one, by the ends of their breechcloths.

And for the novice offering priests who had been detained they made reed rests as for earthen jars for each one. There each one went. They went bearing [the novice priests] upon their shoulders.³²

And as for those a little better [in size], they went grasping each one by their hands.

And when they had set forth, then was the time that they turned upon [the transgressors]; they set upon them, they abused them, they cast them each to the ground. If somewhere there was a puddle of water, there they threw them; they kept sliding them, they kept rolling them; they went sliding them in the mud, they went mingling them with the mud. Just so they forced them to the water's edge, to the place where they immersed one in the water, to a place called Toteco.

And when it had been reached, the fire priest and still other fire priests from various places thereupon [sacrificially] burned the papers and the incense gods and the rubber gods. And the *yauhili* they

finden." The corresponding Spanish text reads: "al colodrillo, unas flores de papel, tambien froncidas, que sobrauan a ambas partes de la cabeza, a manera de orejas de papel, como medios circulos," and later in the same chapter, "era ornamento, que se ponjan tras el colodrillo, como una flor hecha de papel."

29. *tlacuechchotilli* in the *Real Palacio MS*.

30. Identified as *Tagetes lucida* in Dibble and Anderson, *Book XI*, p. 145.

31. Following *mec viloa*, the *Real Palacio MS* contains a few lines which are missing in the *Florentine Codex*: *auh itlanepātla yeatiuh ytoça acapalli, acatl, in tlachichiualli yutl yepa y yeatiuh ome, amatl yech piteatiuh, yech vauhtin, vñ. dandiloli y vñ. dandiloli, qujnnapalotivi, cenca quimauiztilitivi* – "and in the midst of them went what is called a reed seat, made of reeds, with two feathers [right] upon it. Paper went hanging from it, spreading out from it, painted lengthwise with stripes. They went carrying it with much reverence."

32. *qujquechpanotiu* in the *Real Palacio MS*.

scattered in various directions; they spread it over each of the reed beds.

And when this was done, it was as if the water was wounded when there was the casting [of the transgressors] into the water. There was what was like a roar; the water rose straight up. And if anyone tried to come up, they submerged him. He went deep.

And if any were experienced in water, when [the escorts] had submerged them, they went for good. They came up at a distance; then they jumped out, they fled, they escaped.

And some [the escorts] indeed suffocated; they indeed fainted. They left them quite hurt; they left them as if lying dead at the water's edge; they stretched them each out.

And some, who had swallowed water continuously, bitter water, [their relatives] held head down so that what they had swallowed might come out through their noses, through their mouths.

And when this was done, then there was departing, there was going back. Once again they went blowing the shell trumpets.

And those who had been repeatedly submerged in the water went only to their homes. Their home folk accompanied them. They each went sick, they each went trembling, they each went shivering to recover their breath³³ at their homes.

And when there was going to reach the *calmecac*, once again there was a spreading out; the mats of green and white reeds, and also the reeds, were spread out. Once again fasting began; it was called "fasting during the day." For four days they also fasted during the day. No longer was there detaining [for transgressions]; no longer was anything eaten during the day.

Then began the adorning [of the priests]. The novice offering priests adorned the offering priests. They prepared all the divers paper vestments, the round paper rosettes, the pleated paper neck ornaments, and the paper bags for incense, only they bought them [at the market], and the necklaces of wood, only they were sold in the market place.

And when the four days had passed in which there was fasting during the day, then at dawn began the arraying [of the priests].

Then were bedight the various fire priests and all the offering priests. At dawn there was the putting

33. In the *Real Palacio MS* the phrase reads: *yn oc ompa quibhyocuizque*.

on of the round paper rosettes. And they put on their heads the pleated paper neck ornaments. There was the application of the pleated paper neck ornaments; there was painting blue of the foreheads. Their foreheads were painted blue, and they were painted, they were painted after the manner of Uixtociuatl.³⁴ And with them they each grasped the incense bag; they were with them; they were grasped, each one. The various fire priests had their ocelot skin incense bags with small, white seashells. In four places shells hung from the incense bags.

And the incense bags of the offering priests were made only of paper painted like ocelot skin, painted to look like ocelot skin. Some [incense bags] represented the northern phalarope;³⁵ some represented the duck. Their incense bags each went filled with powdered *yauhtli*.

And when this was done, then there was coming together; the feast day was celebrated. The fire priest of the Temple of Tlaloc led the others. He went putting on his quetzal and heron feather crown, and his face was coated with liquid rubber. He put on his mist jacket, his rain mask or his Tlaloc mask. His long, tangled hair fell to his loins. Behind him came chanting all the offering priests. Thus they went to the Temple of Tlaloc.

When they reached there, thereupon the fire priest of the Temple of Tlaloc stopped. He spread out white reeds and *quequexquic*³⁶ and *nopal*, strewn with *yauhtli*, provided with *yauhtli*.

Then he placed [on the mats] four round green stones. And when he had placed them there,³⁷ then they gave him a small wooden hook, stained blue; with it he went striking each one of the round green stone balls. As he went striking each one, he went turning around.

And when this was done, then he scattered *yauhtli*. And when he had scattered it, then they gave him the mist rattle board. He rattled, he shook it; he raised it in dedication [to the god].

And when it was ended, then there was the departing of each one, there was the dispersing of each one, there was the disappearing of each one, there was the scattering of each one; they each went to the

34. Seler, in *Einige Kapitel*, p. 125, has "man . . . bemalt das Gesicht in der Art des bewegten Wassers."

35. *atzitzicujlotl*: identified as northern phalarope, *Lobipes lobatus*, or sanderling, *Crocethia alba* (Pallas), in Dibble and Anderson, *Book XI*, p. 28.

36. In a description of the Huasteca and their region, Sahagún writes: "se dan muy bien todos los bastimentos y muchas frutas que por acá no se hallan, como es la que dicen quequexquic" (Sahagún, Garibay ed., Vol. III, p. 203). In Vol. IV, p. 351, it is identified as *Xanthosema violaceum*. Seler, in *Einige Kapitel*, p. 126, calls it *Pfeilkrautblätter*, and cites Hernández's definition as *Sagittae plinionae*.

37. The *Real Palacio MS* reads *contlailalia* and *ocontlailali*.

various *calmecacs*. But the novice offering priests they only took, each one, to their several homes.

And when there had been going to gather in the *calmecac*, then there was dispersing [of their ornaments]; there was the seating of each one.

And at night, thereupon there began the celebration of the feast day on the top of the Temple of Tlaloc.

The horizontal drum was beaten, trumpets were played, conch shells and reed pipes were blown. There was song. The horizontal drums lay croaking; they lay growling; it was as if they lay droning; and gourd rattles were rattled.

They caused those who were to die, the likenesses of the rain gods, to spend the night in vigil.

And when midnight came, when the night divided in half, then began the slaying. The captives went leading; they died. They began as the fundament of [those to follow]. And when they died, thereupon died [the impersonators of] the rain gods.

Then also was the time when all the paper offerings burned, and the quetzal feathers and the various [other] precious feathers, and some of the green stones — well formed, those which were in no way blemished, which had no defects, as well as some of the rubber-colored stones, those which were blackish, those which were brown, those which were dark.

And when they slashed open the breasts of [the victims], when they opened the breast of one of them, they seized his heart; they went to place it in a vessel painted blue, named the cloud vessel, which was painted with rubber on four sides. And its accouterments were papers dotted with drops of liquid rubber, much rubber; they were covered with rubber.

All this they likewise did to all the impersonators. All their hearts they continued casting there [in the cloud vessel].

And when this was done at midnight, when there had been the killing, all the bystanders, who had been watching continually, all went with their hands continually filled with their artemisia flowers.³⁸ They went thrusting them, they went lunging with them to and fro, they went fanning themselves, [and they went fanning their children with them.]³⁹ It was said that thus they frightened away the worms;

that their [children's] eyes might not become wormy. Some put the flowers in their ears. Some just went holding them in each hand.

And when this was done, when were slain [the captives and the likenesses of the rain gods], thereupon the offering priests came down. They brought down all the offerings — the rubber-spattered sacrificial banners, and the maguey fiber capes painted with designs, also called "mist-faced," and the green stones, and the quetzal feathers, and the incense pieces which looked like men. And they brought down the cloud vessel; it went filled there with hearts.

Then they took them directly to the water's edge, to a place called Tetamaçolco.

And when they had gone to arrive, thereupon they loaded a boat; they filled a boat with all the offerings. And all the offering priests embarked. Thereupon it was poled. It was filled. Those who poled it clung [to the poles]. They poled speedily. The poles were all in blue; they were painted blue; they were colored blue. And they had rubber ornamentation; they had rubber painting; they were rubber-ornamented.

And when they went to arrive in mid-water, at a place called Pantitlan,⁴⁰ there they brought the boat in. And when they had brought it in, thereupon trumpets were played. The fire priest arose in the prow of the boat. Then they gave him the cloud vessel, which went filled there with hearts. Thereupon he cast it in the midst of the water, before the stakes [which were in the water]. It immediately was swallowed; it immediately pierced [the water].

And then the water foamed, kept surging, roared, crackled continually, crackled as it surged. Bits of foam formed.

Thereupon were hung out, tied to the stakes, to the poles, the sacrificial banners. And they bound on green stones, but some of them they cast, scattered, strewed on the water.

And when this was done, thereupon there was going forth. And when there was coming to go forth, when there was going forth there at the opening in the [barrier of] stakes, then [the fire priest] took up the incense ladle, on which he arranged four sacrificial banners. Thereupon he dedicated [the incense ladle with papers]; when he had dedicated

them, then he scattered them. He scattered them [on the water]; he cast them down; he threw them [on the water].

And when he had cast them away, then they turned the boat about. Then there was the return; there was poling. Some went in the prow; some went in the stern.

And when they had come to reach Tetamaçolco, where there had been embarking at the place of embarkation, thereupon there was bathing; then there was going on the part of each one.

And the boat they then went to beach at its resting place at the place for beaching boats.

And when dawn broke, thereupon there was washing of the blue color from foreheads. The offering priests were there at the offering priests' bathing place.

And whoever had only hidden himself, who had only concealed himself when there was fasting for Tlaloc, when there was detaining, later with the washing of the blue stain from their foreheads, they there plunged him into the water.

And when this was done, then there was a quick departure. Then were taken out each of the reed beds; they were each carried out of the *calmecac*. They were each taken out; they threw them, each one, behind the building.

Enough. Here ended the feast of Etzalqualiztli.

Twenty-sixth Chapter, in which are related the feast day and the honors done during all the days of the seventh month, which was named Tecuilhuitontli.¹

Tecuilhuitontli. When this was in progress, the minor feast of the lords was celebrated also for twenty days. And at this time died, at this time her fate befell her, at this time died a sacrificial death [the likeness of] Uixtociuatl, god[dess] of the salt people, the salt makers.

This Uixtociuatl, so it was said, was thought to be the elder sister of the rain gods. And it was thought that the rain gods were her brothers. In one thing she angered them, she offended them: that she mocked at her brothers. And then they banished their elder sister to the salt beds. There she went to discover salt — how it existed, how it was formed, how were made the salt jars; and also grains of salt.²

And on this account, greatly did the salt flats people honor her.

And the array of [the likeness of] Uixtociuatl was [thus]: her face paint, her ornamentation, was yellow. This was of yellow ocher or [the yellow of] maize blossoms. And her paper cap had quetzal feathers in the form of a tassel of maize; it had many quetzal feathers; it was full of quetzal feathers. It was as if they turned it green; it was all turned green; they were outspread; they were divided; it was as if it were vivid green; it became green.

And there were her golden ear plugs. She had golden ear plugs. And the golden ear plugs glittered, flashed. They were very yellow; they were like squash blossoms. And her shift was designed like water; it was designed as if with water [waves].³ And the border of her shift had a design of green stones; it was designed as if of green stones; the border was of billowing clouds; it had a cloud design. And her skirt was designed in the same fashion.

And on her ankles⁴ she had placed bells, golden bells, or rattles. On the calf of her legs she had bound ocelot skins on which were the bells. And when she walked, much did she rustle, clatter, tinkle, continuously tinkle.

And her sandals, her foam sandals, [had] side pieces. The side pieces were of loose cotton yarn with flecks of raw cotton woven in, put in by hand. And the tassels of her sandals were similarly of loose [cotton]. And her sandal thongs were of the same loose [cotton].

And her shield had water lily leaves [and flowers];⁵ it was painted with a waterlily leaf [and flower] design; it was as if painted with a water lily leaf [and flower] design. It was hung with yellow parrot feather pendants.⁶

And the yellow parrot feather pendants were made [into tassels] like the forepart of a locust.⁷ They were [also] made of eagle feathers, of eagle down, and of cut [pieces of] quetzal feathers, and of troupial feathers,⁸ and of the yellow belly and breast feathers and the ruddy tail feathers of parrots called *teoxollotl*.⁹ The shield was rimmed with a circle of yellow parrot feathers.

When she danced, she kept swinging the shield around in a circle; with it she crouched around.

And her reed staff¹⁰ was hung with papers; it had papers. And they were spattered with liquid rubber; they had rubber. In three places [the staff] had cup-like flowers; it had various cup-like flowers. And where there were the various cup-like flowers, there in each one there was *yauhtli*. On each of them were [crossed] motmot feathers; they were provided with [crossed] motmot feathers.

When she danced, she walked leaning on it, she walked thrusting it into the ground. She went marking the dance rhythm with it.¹¹

And for ten days there sang [and danced] for her

4. "las cargantas de los pies" in Sahagún's Spanish text.

5. Corresponding Spanish text: "Tenja vna rodela piniada, con vn as ojas anchas, de la yerua que se llama atlacueçona." For *atlacueçon*, Garibay, in Sahagún, Garibay ed., Vol. IV, p. 322, gives "Madre de las olas" . . . Prob. *Priaropus crassipes*. According to Dibble and Anderson, *Book XI*, p. 126, the broad round leaves of the *atzatzamolli*, probably *Castalia gracilis*, are called *atlacueçonan*.

6. *toztli* is identified as adult yellow-headed parrot, *Amazona ochrocephala* (Gmelin) in Dibble and Anderson, *Book XI*, p. 23.

7. "con flores en los cabos, hechos de pluma de aguja" in corresponding Spanish text. *Chapulín*, however, may be an element in *jiacachapullo*.

8. Identified as *Gymnostinops montezuma* (Lesson) in Dibble and Anderson, *Book XI*, p. 20.

9. Cf. *ibid.*, p. 22.

10. *yoyotopil* in the *Real Palacio MS*.

11. Cf. *tlayaua* in Siméon, *Dictionnaire*: "faire certains gestes en dansant." The corresponding Spanish text reads: "quando baylauan en el areyto, yuase arrimando al baston, y alcandole [sic] a compas del bayle."

in the manner of women¹² all who came together, who gathered together of the salt people, the salt makers — the old women, and the mature women, and the maidens, and those who were maidens recently matured.

While yet there was sun, while it yet shone, then they began to dance. They went arranged, they went arranged each one in order; they were arranged, they were arranged each one in order. It was with cords called "flower cords" that they held one another, that they went stretched out. Their artemisia flowers went placed on their heads.

And they went singing; they cried out loudly; they sang in a very high treble. As the mockingbird takes it, [so] was their song. Like bells were their voices.

The old men led them. They loosed the song; they went directing them in their song — the chief men of the *calpulli*, the old men of the *calpulli*. And they were named keepers of the god[dess].

And [the likeness of] Uixtociuatl went erect in the midst of them. A brilliant feather ornament preceded her; an old man carried it in his arms. And this [ornament] was called Uixtociuatl's brilliant plumage.¹³

And for [the likeness of] Uixtociuatl they daily sang the women's song until the ten days had passed. And when they had gone to pass the ten days, in the evening they began holding vigil for her. At no time did they sleep; they made themselves go without sleep. Thus the night went.

And as [the impersonator of] Uixtociuatl danced, the old women held her; they went holding her as they made her dance.

Likewise the captives danced all the night, those who were to be the first to die, who would be as her fundament, whom they would make her fundament.

And when dawn broke, when it was verily the feast day, then were arrayed the offering priests, those who were to slay the victims. These were called Uixtoti.¹⁴ They were adorned like Uixtotin; they were painted with the face paint of Uixtotin. They had their round paper rosettes, their pleated paper neck ornaments. And their [head] insignia

12. Seler, in *Einige Kapitel*, p. 133, translates: "Und zehn Tage lang sang (und tanzte) man für sie nach Weiberart." Garibay in "Relación breve," p. 300, translates *cirapan cuicaya* as "se cantaba como mujer." Jiménez Moreno ("Primeros memoriales," p. 36) translates the same phrase as "en el Ciuapan se cantaba."

13. Corresponding Spanish text: "vn plumaje muy hermoso, hecho a manera de manga de cruz."

14. It would appear that both the offering priests and the captives were called *uixtotin*. The corresponding Spanish text reads: "quando era la fiesta, aderecauase los satrapas, que aujan de matar a esta muger que la llamauan, como a la diosa Vixtocioatl, y a los captivos: a los quales llamauan vixtoti."

were made [like] the claws of eagles, with quetzal head feathers, with eagle down.

And the legs of the eagles were made also of eagle down. These insignia [were supported] each upon carrying frames, each with holes [in the frames, in which the insignia were inserted]. Here were the insignia; [the frames] were then each tied, each bound around the stomach [with cotton bands], tied tightly, tied firmly. And their cords, the cords of each one, were wide bands, wide woven bands.¹⁵

And all the common folk who looked on, all carried, each one, their flowers; each one their tagetes flowers;¹⁶ and some carried, each one, their artemisia flowers.

And when this was done, then they bore [the likeness of] Uixtociuatl to the summit of the Temple of Tlaloc. And they took up the captives who were as her fundament, whom she would use as a fundament, whom she would make her companions, her companions in death, who would be the first to die.

And when they had taken them up to the Temple of Tlaloc, then there was the slaying of the captives. And when the captives had died, only [then the impersonator of] Uixtociuatl came afterwards; she was last of all, she went last of all, she came quite last after them, she presided over the very end.

And when this was done, thereupon they laid her down on the offering stone. They stretched her out upon her back. They each laid hold of her; they each pulled tightly her hands, her feet. They bent her breast up greatly; they bent down her back. And her head they pulled tightly so that they took it nearly to the ground. And they bore down upon her neck with the beak of a swordfish,¹⁷ barbed, serrated, spiny — spiny on either side.

And the slayer stood ready; he arose upright for it. Thereupon he cut open her breast. And when he had opened her breast, the blood gushed up high; it gushed far. It was as if it rose; it was as if it showered; it was as if it boiled up.

And when this was done, he took her heart from her; he placed it in the green jar, which was called the green stone jar.

And when this was done, loudly were the trumpets blown. And when it was over, then they brought

down the body, as well as the heart, of [the likeness of] Uixtociuatl. They came covered by a precious cape. And this came to pass in the early dawn.

And when it was over, when it was so, when there was ceasing of the part of each one,¹⁸ then there was going, there was dispersing on the part of each one; there was going on the part of each one to their several homes. Those who had provided the feast carried out the feast, each one; celebrated the feast, each one. There was a feast; there was a feast in each place; the feast was observed in each place; the feast was held. There were invitations severally to banquet; there were acceptances severally.

And the old women, the old men, the salt people, the salt makers, the salt preparers, and the salt merchants, the salt traffickers, the people of the salt marshes each drank pulque. There was, on the part of each one, the drinking of pulque; there was the intoxication of each one. In their midst they poured out the pulque with a flower-decked jar.

One of the men made them intoxicated. He set it out; he distributed it. This was one who had not made his wife pregnant [nor] whose wife was pregnant. But if the one who made them intoxicated had impregnated his wife, he would not make them intoxicated; there would be no intoxicating. They would only imitate those who are drunk. The pulque would affect no one.

And when the day had ended, when they had celebrated the feast day, when it was night, then there was lying about. And some who were indeed intoxicated perhaps affronted others, perhaps belabored others, perhaps cried out at others. But afterwards they each fell exhausted,¹⁹ they each slept, they slept as they fell. And anyone who had quitted the pulque, who had quitted it because he was sated — it was called sleep-producing pulque — afterwards, next day, he drank it, he finished it.

And any who had mishandled another, who had perhaps brawled with him, or had cried out at him, later, when day broke, when he had recovered his senses, supplicated [the injured one] with this same pulque in order to appease him. And the one to whom [injury] had been done, who had been shouted at, who had been shamed, then was appeased with the pulque; the offense was pardoned. Such did not remember against [the one who had been drunk] their disputes, their injuries, etc.

Here ended, here concluded Tecuilhuitontli.

Twenty-seventh Chapter, which telleth of the feast day and of the debt-paying which they celebrated during all the days of the eighth month, which was called Uey tecuilhuitl.¹

Eighth feast day: this was Uey tecuilhuitl.

And before the arrival of the feast day, first there was eating on the part of each one. Everyone came together — the poor of Mexico and those who tilled the fields. When at dawn it was still quite dark, there was the drinking of *chiampinolli*. It was dissolved in a boat; they sweetened it with honey. And it was drunk from a vessel called *tiçapanqui*. Each one had a vessel for drinking from which he drank. Each one used the vessel, and some used the vessel twice. All fell to; two [vessels] were consumed. None held back; there were small children, old women, small boys, small girls; indeed there was everyone.

And anyone who could no longer finish it, who could no longer put his mouth to it, who could no longer put his lips to it, set it aside for himself. Some brought, each one, their vessels, some their gourds, in which they placed their leftovers. And anyone not provided with his vessel, who was without his vessel, without his bowl, just took it in his clothing; he made the atole go in his clothing. None made pretences; none cheated with the atole.

But if anyone did cheat with his atole, if he once more tried to enter among the others, there they repeatedly struck him with green canes; they whacked him.

And when this was done, when it had been drunk, for a while there was resting on the part of each one. Just there there was lying down; there was coming together on the part of each; there was gathering together on the part of each; there was conversing on the part of each. It was as if there was murmuring, as if they murmured, as if they twittered. And still others, who were setting aside² the atole, later could lie drinking it themselves; they lay giving it little by little to their small children to drink.

And when midday arrived, when it was time to eat, once again there was indeed the spreading out, the placing in order, the arranging of rows,³ the forming of rows, the forming of lines. The small children were held by the hand; they were borne on the back.

And when there had been the spreading out, then the servers who were to take the food in their capes each girded their loins and each bound their hair with reed blades. [And those who were to take the food in their capes] would give it to the people, would distribute it to the people.⁴ He who served one began with the first. Thus did he serve one: as many tamales as he could take hold of [with one hand], all those did he give him. They were perchance tamales of maize treated with lime, or tamales made with fruit; some were tamales of maize blossoms, some were tamales with twisted ends, some were honey tamales. And of the twisted-end tamales some had grains of maize, some had green beans and grains of maize.

And those who served looked to the small children. Very well did they serve them; great regard did they have [for them]. And there were some servers who offered tamales only to those whom they knew. They offered them to such familiars as perchance their kin or their friends. Perchance twice, thrice they offered them food.

And no one cheated with the tamales. But if they saw anyone try to cheat with the tamales, if it was seen, they struck him; they struck him repeatedly, leaving marks on him with a cord made of reeds.⁵ As much as had been given him they took all away from him; they took from him all his tamales, his own which they had left with him, his own which had [wrongly] come to him.

And there were some to whom nothing came; it broke off with them—those who only came last after the others, who were only last, who only hung on at the tail [of the line]. Although indeed they crowded their way among the others, as they went forcing them apart in order to enter among them, nothing at all was given them. Therefore at first there was much forcing apart of the crowd, much jostling, because they feared lest⁶ with them it be cut off.

And among those with whom it was cut off there was weeping. They said:

"What can we do, we who are poor? In misfortune hath the feast day come! To what avail is our misery? Miserable are our small children!"

And if they saw that somewhere else perchance food was still eaten, they ran over there. There was running; they betook themselves there, they crowded there like the importunate. Although [those who ate] chased them away, beat them hence, beat them on the head, they only the more threw themselves at one, they only the more forced themselves violently on one.

And this was done for seven days while there was eating. And for this reason was this done,⁷ that the ruler was pleased to show benevolence to one, that he showed benevolence to the common folk. For indeed there was much hunger; at this time dried grains of maize were costly; then there was much want; they were tired; it was very much a time of our death.

And until the time that the feast day of the lords came, upon every day there was song. When singing and dancing began,⁸ there was very little sun; the sun had been shining bright. Thereupon fire was laid in the braziers; fire was placed in the braziers.

And the braziers lay in various rows; they lay in various lines; they lay in six rows. And each row was of ten [braziers]. And the braziers were so wide, each one, that two [men] took one in their embrace, and each was as tall as a man.⁹

And when this was done, then there was issuing from the house of song. They came singing, they came dancing. Between each pair [of men] came the women, the courtesans, the pleasure girls, the best ones, the chosen ones, those set apart.

And they went joining with,¹⁰ went taking by the hands¹¹ those worthy of honor, the masters of the youths, and the young seasoned warriors, and the shorn ones, the Otomí, and the noblemen. [These last] were not arranged in order with them; they only placed themselves behind them, near them.

And the women were indeed adorned; they were indeed carefully bedight. All good were their skirts,

their shifts which they had put on. Some of their skirts had [designs of] hearts; some had a mat design like birds' gizzards; some were ornamented like coverlets; some had designs like spirals or like leaves; some were of plain, fine weave. All had borders,¹² all had fringes; all [the women] had fringed skirts.

And some of their shifts had tawny [streamers] hanging, some had smoke symbols,¹³ some had dark green [streamers] hanging, some had house designs, some had fish patterns, some were only of plain, fine weave. And their neck [openings] were all large and their borders were also very deep; they were wide.

And when they danced, they unbound their hair; their hair just covered each one of them like a garment. But they brought braids of their hair across their foreheads.

And they were not decked with feathers; neither were their faces adorned with paint.

And thus were bedecked the masters of the youths: their array consisted of the cape of netting. And the brave warriors, they who had straw lip pendants,¹⁴ had white net capes with seashells set in fish patterns. [These] were called their carmine-colored capes.

And as for all the men, whether brave warriors [or] youths, their net capes were only black, all with eyelets on the border,¹⁵ and they had, each of them, their turquoise [ear plugs].

And those who led had only bell-shaped ear plugs.¹⁶ And those who had bell-shaped ear plugs¹⁷ also had their small lip pendants matching [their ear plugs]. Some were like lizards, some lip pendants were like dogs, some like a broad-leafed water plant or rectangular.

And the youths who had the hairdress of a warrior had, each one, their lip pendants made in the form of a circle containing four smaller circles.

And all the people who were just youths had the plain round lip plugs which they set in place.¹⁸

And the breast plates of the masters of the youths,

18. Corresponding Spanish text: "lleenauan vnos beçotes redondos, como vn circulo, con quatro circulillos en cruz, dentro en la circunferencia, que era algo ancha: todos los otros mancebos, lleenauan vnos beçotes, a manera de circulo, sin otro labor."

the breastplates of each one, were made of small, white seashells. All the neck bands with pendants¹⁹ of the shorn ones, and Otomí, were of white gastropod shells.

And the shorn ones had attached lip plugs in the form of birds, and the Otomí had attached lip plugs formed like the broad leaf of a water plant.

And those of the brave warriors who were very proud each bought for himself genuine gastropod shell neck bands, very clear and limpid. And those who only came last, who only followed, each bought for their neck bands those which were only yellow; and they were not hard, neither were they very costly.

And those who had taken captives, the leaders of the youths, had their feather shoulder devices in the form of birds. They went carrying them upright over their heads.

And the seasoned warriors carried upon their shoulders feather devices formed like trees. In three places there were eagle feather clusters bound with ocelot skin. And at the base they were wound in three places with red cotton thread.

And some raised up quetzal feathers in the form of calliandra flowers, some a forked heron feather ornament; some set up the head plumage in bird form, some a device made of imitation quetzal feathers.

And on their legs, on their left ones, they placed hooves, real deer hooves. And their thongs were of this same deerskin cut thin, cut in narrow strips.

And thus were they variously painted. Some placed a black stain on their cheeks called "black cheek ash vase"; they applied iron pyrites to it. And some carried a black [stripe] upon their foreheads, from ear to ear; it was called "black sweat"; they also applied iron pyrites to it. And some extended diagonally a black [stripe], called *auitolli*, on their faces; they also applied iron pyrites to it.

And thus was their hair shorn. All had shorn their hair in the manner of masters of the youths; all together they had shorn their hair in the manner of masters of the youths. And those who had their temples shaven had each shaved their temples well; they had scraped them down well with a [sharp] piece of turtle shell. And they applied yellow ocher to them; they applied downy hairs to them.

And when this was done, when already they

danced, torches, pine fire brands, guided them. They went burning, they went sputtering, they went crackling. And as the young seasoned warriors carried them in their arms, they were much weighed down; it was as if they ran on their buttocks. And the resin, as it were, fell in large drops, and the live coals went scattering one by one on the ground, went spreading one by one on the ground. And the [charred] pine fell bit by bit to the ground.

And along the sides, only from fire ladles held in the hand was there light. They who gave light were youths who had fasted for twenty days. They were spread out in a circle; they ranged on the sides. On one side were those of Tenochtitlan; on the other side were those of Tlatilulco.

And they did not dance; they did only one thing, they only provided people light. And they kept watch, they kept a close watch on people. Their eyes were indeed on their charge, that no one take it upon himself, that none there make eyes at the women, in case anyone should go jesting there [with a woman]. If anyone was seen, [if] he yet only intended it, [if] he tried it — perhaps later, next day, or later, two days hence, they punished him. They beat him repeatedly with pine boughs²⁰ which went burning. Verily, they left him for dead.

And when there was dancing, sometimes Moctezuma emerged, came forth to dance, and sometimes he came not forth; it was only as his heart felt.

And that they might go in line when they danced, they held one another by the hand, they held one another about the waist.

And some they grasped by their hands. There was grasping of the hands. And thus they went going with their feet, thus they made the dance movements; they went together with their feet. And they whirled about repeatedly; they went passing by the braziers; they went passing among them; they went entering into all the rows of braziers. When they had gone to reach there where [the space] ended, once more they circled back; they returned [whence they had started].

And when there was a cessation, already it was late at night, already time for there to be sleeping, as when the eyes are blinked. Today it would be perchance already the hour of nine.

And when it was enough, when it had been stopped, when the ground drums faded out, then

there was dispersing on the part of each one, there was going on the part of each one; all betook themselves to their homes. The great noblemen were left there by torch light; they went lighted by torches; they went giving them torchlight to their homes.

And the women who had danced with people holding them by the hand then were assembled when already there had been song and dance; they led them away, even as was done with the masters of the youths. They gathered [the women] together, grouped them, rounded them up, placed them together, grouped them together, indeed hunted them out, lest one might go somewhere, lest one be forced to accompany someone, lest some perverse youth might take one away.

None the less, the noblemen addressed the matrons that they might go releasing some [of the women], might go releasing one. Not only of their own accord did [the women] go somewhere; only at someone's word was it done.

And when they released them, [the girls] were given gifts. Gifts were given there, and food was given there. And also gifts were given each of the mistresses of the women,²¹ the matrons. They put them aside for themselves; they each put them aside for themselves; they took their leftovers to their several homes.

And as for the masters of the youths: the master of youths of front rank, worthy of honors, asked for the women only in secret, not before others. Perhaps he went to await her in his home, or else he asked for her elsewhere. Just so, they ate in secret.

And the woman came forth only at night; she spent only the night [with him]; she departed when it was well into the night.

But if one was noted living in concubinage, there was anger because of it, there was concern over it. For all this there was assembling, for this there was consulting there in the song house.

There, before everyone, they punished him. For this they cut off his warrior's hair dress; they took from him all his possessions, his adornment, his lip pendant. Thereafter they beat him repeatedly with a pine stick; they verily caused him to swoon. They singed his head with fire; his body smoked; it blistered.

And when they had indeed caused him to swoon, with this they cast him forth.

21. *tlaughtiloia* in the *Real Palacio MS*.

They said unto him:

"Go, rascal! Perchance thou art a man, perchance thou art a brave warrior! How can we care for thee? Wherever our foes come rising against us, let us die as brave men!"

And these were the words which they said unto him; indeed much else.

And when with this they had cast him forth, he just slowly crept away; he left going from one side to the other; he just went confused; he left full; he withdrew forever; nevermore was he to sing and dance with the others.²²

And the mistress of the women just expelled the [erring] woman. Nevermore was she to sing and dance with the others; nevermore was she to hold others by the hand. Thus the girls' matrons established; thus they resolved.

And the woman who had erred withdrew forever. Never again was she to expect that once more she would sing and dance with others.

And the one whom they had punished because of the woman then married her; he quieted the affair.

And before the real feast day came which was called Uey tecuilhuitl, on the tenth day, then the woman [who was the likeness of] Xilonen died. Her face was painted in two colors; she was yellow about her lips, she was chili-red on her forehead. Her paper cap had ears at the four corners; it had quetzal feathers in the form of maize tassels; [she wore] a plaited neck band. Her neck piece consisted of many strings of green stone; a golden disc went over it. [She had] her shift with the water lily [flower and leaf design], and she had her skirt with the water lily [flower and leaf design. She had] her obsidian sandals, her carmine-colored sandals. Her shield and her rattle stick were chili-red. In four directions she entered, or she entered the sand.

For this reason it was called *xalaqui*: in this way she foretold her death—that on the morrow she would die.

She began the feast day when she entered Tetamaçolco. The second place where we had been arriving, we went to reach [to accomplish the ceremony], and it was a place named Necoquixecan. The third place in which she entered was Atenchicalcan. For this reason was it called Atenchicalcan, that here gushed forth the water, and also here faded away the wind. The fourth place she entered was there at Xollocó. There she concluded.

22. *quicoyanoç in ibid.*

[These] just sustained, just carried along the four year-bearers — Reed, Flint knife, House, Rabbit;²³ thus do the year-bearers go describing circles, go whirling around [as they measure time].

And when this was done, [the impersonator of] Xilonen was to die at dawn. All during the night songs were sung after the manner of women. Vigil was kept. Everybody kept vigil; they slept not; the women remained sleepless; they sang her songs; they sang for her.

And when day broke, then began the dancing. Verily everyone, the masters of the youths, the youths, the leaders, and the seasoned warriors had, each one, their maize stalk. These were named "bird banners."

Likewise the women danced, those who belonged to Xilonen. They were pasted with red feathers and they were painted with yellow ocher. Also, thus were their faces divided: they were yellow with ocher about the lips, and they were light red with arnotto²⁴ on their foreheads. They had their wreaths of flowers upon their heads; their garlands of tagetes flowers went leading.

These women were known as offering priestesses. They mingled not with the men; they just remained apart. They went encircling [the likeness of] Xilonen; they went enclosing her. They went singing for her after the manner of women. These women were called "the hanging gourd."

And the masters of the youths went dancing before [the impersonator of Xilonen]; they followed a serpentine course.

And for this reason were the women known as "the hanging gourd": the two-toned wooden drum, which they beat as they went, had going tied to it a water gourd, which went under, at the bottom of the drum; it looked as if it went hanging. They who beat the two-toned drum only went carrying under their arms the little drum which they went beating with the rubber-tipped drumsticks.²⁵

23. Entering the sand was evidently a ceremony literally enacted, and logical in view of the attributes of the deities whose festivities were honored by it. The explanation in both Sahagún's Spanish text and the Aztec column is not explicit. The four places in which Xilonen entered the sand may be identified in modern Mexico City and are associated with water and sand. *Aquia* is probably an assimilation of *aquia*. Angel María Garibay K., personal communication.

Seler (*Einige Kapitel*, p. 150) translates *quia moço xalagua* as "ging sie (in die Erde) oder in den Sand hinein."

The corresponding Spanish text, quoted at length, is: "Ataujada con estes ataujos, cercauanla muchas mugeres, lleuauanla en medio, a ofrecer encienso a quatro partes: esta ofrenda bazia a la tarde, antes que muriese. A esta ofrenda llamauan xalagua, porque el día siguiente auja de morir: el vno destes lugares se llama tetamaçolco, el otro se llama necocyxecan, el otro se llama atenchicalcan, el quarto se llama xoloco. Estos quatro lugares, donde ofrecian era en reuerencia, de los quatro caracteres de la cuenta de los años."

24. Bixa orellana L. in Dibble and Anderson, *Book XI*, p. 241.

25. Corresponding Spanish text: "a las mugeres, yvanlas tañedo [sic], con vn teponaztli, que no tenja mas que vna lengua encima, y otra debaxo: y en la debaxo, lleuaua colgado, vna xicara en que soelen beuer agua, y assi suena mucho mas, que los que tienen dos lenguas,

And the offering priests attended them. They went blowing wind instruments; it was shell trumpets that they went blowing. And they went scattering powdered *yauhli*; they went strewing it, they went casting it [as] they went to meet [the likeness of] Xilonen.

And the fire priest, who was to slay [the likeness of] Xilonen as an offering was well arrayed [and] adorned. He bore an eagle claw device upon his back; it went surrounded by quetzal feathers. His holder was of eagle down [with] quetzal feathers. His flint knife was of gold. He had his rosette on his back; it was of paper workmanship. Etc.

A man carried the mist rattle board upon his shoulders; it rattled in three places. And when they had gone to arrive at the place where [the impersonator of] Xilonen was to die, then the fire priest came to receive her. Before her he set up the rattle board; he rattled it, and with *yauhli* went forth to receive her, and scattered it toward her.

And thereupon they took her up to the Temple of Cinteotl. Then they laid her upon the back [of a priest] — not upon the offering stone; rather, she died upon [a priest's] back. And when there was dying upon his back, it was called "it has a back."

Thereupon she performed her service. [The sacrificing priest] severed her head. When she had [thus] performed her service, when they had slain her, thereupon he took her heart from her; he placed it in the blue gourd. They who knew, who were well experienced, knew where they placed it, where they required it.

And at this time were eaten, for the first time, tortillas of green maize. For the first time was offered, for the first time was chewed the cane of green corn. And for the first time were cooked amaranth greens. And for the first time the sweetness of flowers — tagetes, tobacco flowers [— was smelled].

And when it was Uey tecuilhuitl, there was dancing which was the particular function of the women: old women, maidens, mature women, little girls. The maidens, who had looked upon no man, were plastered with feathers; their faces were painted.

Everyone made plain tamales, made fruit tamales for themselves. They offered them to each of their gods.

And of the old men and the old women it was the exclusive privilege that they drink pulque. Absolutely no one of the youths, the offering priests, the maidens drank pulque.

And if anyone was noted, perforce he was seized, he was put in jail, in the granary.²⁶ Council was held concerning what would be done about it; whether perchance they would punish him. There was weighing [of evidence]; there were opinions given. They determined if it was his privilege, and if it was not his privilege he was condemned to die. No more did he go forth; there was no protection for him; no longer was it his half-entanglement;²⁷ there was no hope for him.

When whoever it was had been condemned, in the evening there was announcing to the people that there would be assembling, there would be gathering wherever [the judge's] words were to be published.

It was said: "On the morrow there will be dying. All of the commoners will be troubled. Some of those who drank we shall leave alone. Fear will fall upon them."

[The condemned] came with wrists bound together. [The constables] placed them in the middle [of the market place]. Thereupon the high judges spoke. They admonished the people. They spoke about pulque, which no youth was to drink. Only later, when they matured, when they had become old [might they drink it]. And those who had youths, who already had maidens, verily their privilege it was that they might drink pulque.

And when this was done, when the judgment ended, when Moctezuma's slayers, his executioners, struck the backs of each [of the criminals'] heads. They were the Quauhnochtli, the Ezuauacatl, the Ticociauacatl, the Tezacacoacatl, the Maçatecatl, the Atempanecatl.²⁸ These were not lords; they were only constables under command, appointed, approved, courageous, able, who spoke well.

And when [the criminals] had been killed, there was terror because of it; the intelligent, the clear thinkers were terrified. But the perverse, those badly brought up, those who could not think, the effeminate, the rebellious only laughed at it, only jested at the admonitions. They only listened mockingly; they

Twenty-eighth Chapter, which telleth of the feast and of the offerings which they made during all the days of the ninth month, which was named Tlaxochimaco.¹

The ninth month was known as Tlaxochimaco. It also was of twenty days.

Two days [before the feast] there was the seeking of flowers. There was scattering over the mountains when there was looking for every flower — various flowers, mountain flowers, dahlias,² hummingbird flowers,³ mountain tagetes,⁴ ranunculus,⁵ bocconias,⁶ tiger lilies,⁷ plumerias,⁸ didymeas,⁹ forest magnolias,¹⁰ talaumas,¹¹ earth plumerias,¹² tagetes,¹³ lobelias,¹⁴ white water lilies, red water lilies,¹⁵ castalias.¹⁶

And when they had been gathered, when they had come bringing the flowers, when there had been coming bringing [them], when it was dawn, then they were strung together. There was stringing; they strung them. And when the flowers had been strung together, then they were twisted, they were wound [in garlands] — each indeed long, each very long, each thick, indeed thick.

And when there had been the arranging, then carefully they were each set down; they were indeed handled with esteem, they were cared for with reverence.

And when this was done, all the common folk together fell to making tamales for themselves. In the evening they plucked turkey hens and [killed] dogs; also in the evening they singed them. Those were singed which would be required early in the morning.

There was confusion. There was indulging in sleeplessness; there was wakefulness. There was living for the feast day. It was as if each one was active; there was preoccupation on the part of each one so that there would be preparation.

And when the day broke, the guardians of the god thereupon each made offerings to Uitzilopochtli; they adorned him with garlands of flowers; they placed flowers upon his head. And before him they kept spreading, they kept lining up, they kept placing in rows, they kept hanging in rows all the various flowers, the precious flowers, the gifts made as offerings.

Thereupon flowers were offered all at the same time to all of the gods, the images of the gods, the demons. They were adorned with flowers, they were girt with [garlands of] flowers; flowers were placed upon their heads there in the temples.

Thereupon all at the same time in all the houses, in the homes of the stewards, in the homes of the great noblemen, and [in] each of the young men's houses, they all laid them out [before the idols]; they all spread them out in people's homes.

And when this was done, when they had been ornamented, then there was eating, there was drinking. Everywhere there was eating, there was celebration of the feast day.

And when midday came, then¹⁷ there were singing and dancing. Verily they ornamented all the youths, the masters of the youths, the leaders of the youths, the seasoned warriors, the shorn ones, the Otomí. There in the god's courtyard, in the courtyard of [the Temple of] Uitzilopochtli, there was dancing.

And those who led were the shorn ones, the great, brave warriors, each of whom was considered [equal to] a battle squadron, who did not hide themselves behind something in war; they who turned [the enemy] back, they who wheeled them around.

Also the women danced—not one's daughters [but] the courtesans, the pleasure girls. They went, each one, between [pairs of the men]; they each went grasped in their hands; they were grasped

about the waist. They were all in line; they went all in line; they went winding to and fro. Nowhere did the line break; nowhere were hands loosed. They went in order.

And the singers, those who sang for them, those who beat the drums for them, who beat the ground drums for them, were quite apart, quite to one side. They were against a building, against a round altar [or pyramid]. And the altar was completely round, circular, like a spindle whorl. Against it, by it, stood [the musicians].

And as they danced, they did not keep leaping nor did they make great movements; they did not go making dance gestures; they did not go throwing themselves continually¹⁸ about, they did not go dancing with arm movements, they did not continually bend their bodies, they did not continually go whirling themselves, they did not keep going from side to side, they did not keep turning their backs.

It was quite quietly, quite calmly, quite evenly that they went going, that they went dancing. Very much as a serpent goeth, as a serpent lieth,¹⁹ was the dance. None disturbed, none intruded, none encircled,²⁰ none broke in.

And those who embraced the women were only the great, brave warriors. But those who were only masters of the youths did not embrace them.

And when there was an end to the dancing, there was only a little sun; already the sun was about to set. There was dispersing, there was going on the part of each one.

And everywhere in the houses, there was singing; there was singing in each one. They sang for their gods: perhaps Omacatl, or Chicome coatl, or Ehecatl, or Coatl xoxouhqui. Over here, over there, there was singing; song was widespread. Cries were widespread; cries were widespread as there was singing. The singing kept reechoing in a great din.

And only the revered old men and the revered old women drank pulque. And he who became really drunk cried out at people or boasted of his manly deeds.

20. *tlapeyonia* in *ibid.*

Twenty-ninth Chapter, in which are named the feast and the debt-paying which they celebrated during all the days of the tenth month, which was called Xocotl uetzi.¹

The tenth feast, Xocotl uetzi, likewise was of twenty days.² They concluded it in twenty days.

And when they set up the *xocotl*, it was on the day after Tlaxochimaco³ that at dawn they began it. Thus during one day was their strength used. Shouting was widespread. The overseer,⁴ as he hastened it, shouted; he shouted at one.

He said: "[Use] all your strength! Pull upon [the ropes]! Pull with strength!"

And when he shouted at them he was hoarse. It was as if his voice broke.

There was piled up for themselves, there was provided a mound of earth by means of which [the *xocotl*] was erected.⁵ Strength was indeed exerted; they each took hold of it with all their force.

And the *xocotl* was twenty-five fathoms long. They removed its branches; only its main stalk was left. Thus, in the manner in which they set it up, it was for twenty days. When they had brought it, it had no adornment.

And when twenty [days] had gone by, then verily it was the time of the feast day, Xocotl uetzi. And when the feast was to be observed two days hence, once again they laid it out; quite gradually, quite carefully they laid out [the *xocotl*]. They took pains lest it break, lest it crack, lest it snap. They went resting it upon wooden supports;⁶ they went laying it down upon wooden supports with much caution.

1. Garibay ("Relación breve," p. 303) translates *Xucutl valuetzi* as "El Xócotl viene a caer." Seler, *Einige Kapitel*, pp. 160, 161, has "der Xocotl fällt herab" for both *xocotl valuetzi* and *xocotl uetzi*.

In *Gesammelte Abhandlungen*, Vol. II, pp. 449, 1039, and Vol. III, pp. 289–92, however, Seler argues that Xocotl uetzi should have been celebrated as the feast of Otontecutli, god and ancestor of the Otomí, rather than for Xiuhtecútl; because the *xocotl*, which was set up at the feast on the top of the tree, was the likeness of Otontecutli. As evidence, Seler mentions the adornment of the *xocotl* and a passage from the *Real Palacio MS*: *iquac in itech motlaliaia yn inaciao Otontecutli*. Sometimes, Seler adds, the figure was a mummy bundle.

Cf. also Jiménez Moreno, "Primeros memoriales," pp. 41–45.

2. *cēpoualilhuitica* in the *Real Palacio MS*.

3. The *Real Palacio MS* reads: *O yuh yalhua tlaxochimacoc*. The sentence could be translated: "And when they set up the *xocotl* the previous month of Tlaxochimaco had been celebrated." The cutting and bringing in of the *xocotl* occurred during the previous month of Tlaxochimaco. Sahagún's corresponding Spanish reads: "en passando la fiesta de tlasuchimaco, cortauan en gran arbol." For more discussion see Seler, *Einige Kapitel*, p. 161, n. 1, and Jiménez Moreno, "Primeros memoriales," pp. 38–40.

4. In the Garibay ed., Vol. I, p. 202, Sahagún defines the duties of the *tepan mani* as "los que tenían cuidado de recoger la gente." The corresponding Spanish text for Xocotl uetzi appears to use the term *tlayacangues* as a synonym, here rendered into Spanish as *cuadrilleros*.

5. See *Codex Borbonicus*, *Codex Féjérváry-Mayer*, and Jiménez Moreno, "Primeros memoriales," for illustrations of this scene and others for the month Xocotl uetzi.

6. Cf. *quauhtomacatl* (Siméon, *Dictionnaire*, p. 370); the term is *quauhtonmaċatl* in the Nahuatl and *quaubiomaċatl* in the corresponding Spanish text.

And when they had laid out the *xocotl* in some fashion, then there was entering of the houses on the part of each one, there was resting on the part of each one. And they piled up all the heavy ropes on the *xocotl*; they placed them scattered over it.

And when it dawned, then the carpenters came forth; they assembled. They brought their equipment; they had with them adzes, hatchets. Well did they make even, did they smooth [the *xocotl*] where it had knots, where it was broken off, where it was uneven.

They smoothed another pole of five fathoms. They joined it to strengthen the main stalk of the *xocotl*. They made its main stalk very even. They girded, they held its tip with ropes; they placed [main stalk and pole] within the ropes.⁷

And when this was done, thereupon the fire priest took charge. The old priests helped; also those who cast [victims] into the fire helped. There were three of them. They were very powerful; they were each tall; they were very tall; they were exceedingly tall. They were lords.

The first was named Coyoua; the second was named Çacancatl;⁸ the third was named Ueicamecatl. As such were disguised those who knew the task of adorning [the *xocotl*].

And the *xocotl* image they fashioned as of flesh. They formed it of a dough of fish amaranth and maize. They arranged pure white papers for it, each of which they placed on it. They had no design.

On it they set its shoulder sash of paper, its paper breechclout, its papers designed with falcons, its paper wig, its *xocotl* shifts. There were two *xocotl* shifts. They were not put on; they were only on the tree in two of its incisions. Then also they placed in another of its incisions large papers, wide — a yard wide;⁹ they were ten fathoms long. They were reaching one-half the length of the *xocotl*.

And also they made three tamales of amaranth seed. They pierced them with sticks. In three places they set them up [over the image]. And thereupon on the *xocotl* they bound ropes there, half way up the *xocotl* — ten [of them].

And when it was made ready, thereupon they set it up. Then there was an outcry, there was shouting.

8. Probably çacamecatl is meant. Cf. the Jourdanet-Siméon edition of Sahagún, p. 129.

9. Cf. Chap. 24, n. 17.

They said: "Go on there,¹⁰ brave warriors! Pull with all your strength!"

Thereupon they went to setting it upright; they went about raising it [by using] the wooden supports, and they pried it up with levers. And likewise when already it went, when already it went rising, there was a great outcry, there was much shouting, there was much din.

And when this was done, it was quickly erected. Much did the earth stir; much did it move and swirl. When this was done, thereupon they filled [the hole] with stones, all these round rocks. They threw large stones in;¹¹ they cast them in. And when it was filled with stones, thereupon it was covered above with earth. Thereupon there was going on the part of each one; there was entering the houses on the part of each one. It was quiet; silence prevailed.

And thereupon came out the captors [with] their captives who were to be cast into the fire. [The captors] were well arrayed; they were adorned. They were painted with yellow ocher;¹² their faces were stained red. They bore upon their backs butterfly devices purely of flaming red feather composition. And their shields were [decorated with] shanks; either eagle legs or ocelot shanks were designed there on their shields in feathers. Hence were the shields called "shanks."

Thus did they go dancing. They went dancing with the captives; they went winding back and forth. Thus they proceeded by twos. The captives, they who were to be cast into the fire, also went dancing. They covered their bodies with chalk; they had their paper breechclouts, their paper shoulder sashes, then their paper wigs. They decked their heads with feathers. They had their feather lip pendants; they were strained chili-red about the mouth; they were stained black in the hollows of their eyes.

And when the sun had set, thereupon it ceased. They shut the captives in, and the captors departed. Likewise in the same place reposed those who owned the captives. They guarded their captives.

And then they started holding a vigil for them. It was already far into the night when the old men of the *calpulli*, the elders of the *calpulli*, there where they belonged, departed. And when they ended the

vigil, it was midnight, in the midst of the night, [when] night divided in half.

When this was done, thereupon there was the taking of hair [from some of the captives]; the captors took hair from the crowns of the captives' heads, a little of the captives' hair; they cut it from the crowns of their heads; they bound it at the middle with chili-red thread, on which were two forked heron feathers. And the obsidian knife with which they cut their hair they named "obsidian falcon."

When this was done, when they had taken [the hair], then they put it into a small, woven reed coffer, called "hair coffer." This hair coffer the captor carried to his home. He hung it high. Thus it was shown that he was indeed a taker of captives; thus his manly exploits were boasted. Always it hung from the roofing of his house, from the roof beams. It never came down until the time that he died.

And when [the captives'] hair had been cut, the owners of the captives yet slept but little. They guarded [the captives] well; they watched them well; they were indeed careful lest those who were to be cast into the fire should flee.

And when it dawned, when the earth showed clearly,¹³ thereupon they arranged [the captives] in order before the skull rack. And when they were arranged in order, a man [a priest] set upon them; he set upon them there; he pulled off of [these] others their banners and their paper adornments,¹⁴ and perchance their wretched little capes. He placed them in the eagle vessel. There they burned.

Thereupon all who were going, the captives who were following, continued to place their banners and their little capes [in the fire]; there they all burned up. Indeed already they were to leave the earth forever. Futilely they were in order there. They were awaiting their death; indeed in truth it was already the time.

And there they were awaiting Paynal, the envoy of Uitzilopochtli. And when Paynal came to arrive, thereupon he ascended to the place where men were sacrificed, where the unhappy captives were to perform their service. And when this was done, no sooner had Paynal arrived than he thereupon descended [from the pyramid]; it was only that

a man [a priest] brought him down; he came carrying him under one arm. He who brought him down was called his father, or his elder brother. And when he had descended, he came forth before the captives; he came forth in their presence.

Once again Paynal quickly went up. And a captor stood for the purpose; he awaited him. Then the captor seized [the captive] by the head; he grasped in his hand¹⁵ [the hair of] the crown of his head. Thereupon he went off leading him. When he had gone taking him to the landing at the foot of the pyramid, there he left the captive.

Then those who cast men into the fire came down; they seized him. First they threw *yaubtli* in his face. Then they bound his wrists; they brought each hand behind his back, and they bound his ankles.

Thereupon they placed him upon their backs to carry him up. And when they had gone taking him up, then they cast him into the fire.¹⁶ High¹⁷ did the ashes shoot up; they indeed billowed.

And the brave warrior's flesh thereupon sputtered; blisters quickly formed; burning spots quickly arose.

Then the old priests quickly seized him; they quickly drew him forth. They stretched him out on the offering stone. They cut open his breast; they split open his chest. Then they cut out, they tore out, his heart; they cast it before Xiuhtecutli, the representation of fire. And in just the same manner died all the captives whom Paynal delivered up here.

And when this was done, when the brave warriors had come to an end, thereupon there was dispersing, there was departing. There was going to people's various homes. There was eating; the feast day was observed.

And [as for] Paynal, his old men carried him. They went encircling him, they went crowding about him. They left him, they placed him in his place, the place where he was guarded. And when they had gone to leave him, thereupon they descended; they went in single file. And when they had come reaching the base, thereupon they dispersed, each one; they went, each one, to their various homes. They each ate.

And when this was done, when there had been eating, then there was coming forth, there was the assembling here of all the men, the youths, and the

boys, the small boys, those with a small tuft of hair at the back of the head,¹⁸ those with a little tuft of hair at the back of the head. They put all in order.

At this time was begun the singing and dancing,¹⁹ at midday. In this manner was it danced: the serpent dance was performed. Between [the men] the women were going, as hath been told. The courtyard was well filled, it was well crowded, it was well packed. No longer was there coming forth among the people. There was much jostling.

And when they grew tired, thereupon there was leaving on the part of each one. Then there was shouting. Then they passed over there where the *xocotl* stood. Indeed there was continual trampling; indeed there was hurrying; indeed there was a press of people.

And the masters of the youths kept people away [from the *xocotl*]. Their pine staves lay in the hands of each one. They did not hold back as they struck one, they did not spare their staves as they struck one. And those who in some way, somehow, quickly broke through [as the others] held them back, thereupon put their strength to the ropes, the heavy ropes.

Thereupon there was climbing on the ropes. On one rope maybe twenty climbed as if each were hanging. Not all reached the top; only some reached the top. The one who went leading, he indeed could reach the *xocotl* image. It was only of amaranth seed dough. He took all — its shield, its tipless arrow, and its dart thrower.

And the amaranth seed dough pieces he cast down there; he scattered them on the people. All the people who stood below looked up. When the amaranth seed dough fell, everyone stretched forth his hands. As if there were brawling, so was there shouting. Also some grasped the head ornaments of the amaranth seed dough [figure]; they also scattered them on the people. They were carried off down below.

And when this was done, then, thereupon he who had captured the *xocotl* [image] came down. When he had descended, when he had come to reach the ground, thereupon the old men seized him; they took him up to the place of sacrifice. There they gave him gifts. And everyone thereupon pulled the ropes; there indeed was pulling; strength was indeed

expended. And the *xocotl* then fell to the ground. There was a sudden billowing of dust; it suddenly broke to pieces. Into three parts or into four parts it quickly flew.

When this was done, thereupon there was going on the part of each one. All was quiet; all was clear. And afterwards they took the captor of the *xocotl* [image] to his home. They arrayed him in a brown cape with an edge striped with feathers.²⁰

And if one were a captor [of the *xocotl* image], he could [thus] array himself, he could [thus] go wrapping himself; no one might dispute him over it. But if one were not [such] a captor, he only kept it; it would be only in his care. And mayhap he would sell it when he was already poor or during a sickness.²¹

And thus they left him at his home; two old priests went grasping him; they went holding him by the arm. Behind came the offering priests. They blew wind instruments for him; they went sounding shell trumpets for him. And he went carrying his shield on his back. And when they had gone to leave him, then they turned back [to the temple].

Thus in truth here ended, [here] concluded the feast day.

Thirtieth Chapter: here are related the feasts and the honors observed during all the days of the eleventh month, which was called, which was known as Ochpaniztli.¹

The eleventh feast day was the one known as Ochpaniztli. Before the very time, the very day, had come, for five days nothing more was done; only silence still prevailed. But when the five days had passed, then began the hand-waving dance. At that time it was fifteen [days] to Ochpaniztli. This was done for eight days.²

And thus was the hand-waving dance danced: there was the arranging of various rows;³ four rows were formed; there was the forming of four rows. Thus they danced: they only went walking; they kept circling about. Their hands each went filled with flowering tagetes branches. They went grasping them in their hands on both sides.

They did not sing; none called out; they went in complete silence.

Yet if some of the perverse youths became drunk, they imitated the ground drums. As the ground drums sounded, just so they went about doing. On both sides they went circling their arms. They only went in rows; they only went as one. None broke ranks; none turned another aside; none went astray.

And when the hand-waving dance began, it was already late afternoon. And when there had been ceasing on the part of each one,⁴ the sun had already set. And when eight days had passed, then began the mock battle [of the women physicians]. For four days this was done there before the house of song and dance.

In this manner was it done; in this way this was done: there were all the women physicians—the old women as well as the maidens as well as some of the pleasure girls.

2. The corresponding Spanish reads: "*los cinco dias primeros deste mes no bazian nada, tocante a la fiesta. Acabados los cinco dias; quinze dias antes de la fiesta començauan a baylar, vn bayle: que ellos llamauan, nematlaxo: este bayle, duraua ocho dias.*" Seler, in *Einige Kapitel*, p. 172, translates the Nahuatl as follows: "*Als der eigentliche Festtag noch nicht erricht war, noch fünf Tage (fehlten), geschah nichts, alles bleibt noch still und leer. Und nachdem die fünf Tage zu Ende sind, beginnt der Handbewegungstanz. Wenn noch fünfzehn Tage bis zum Ochpaniztli sind, wurde er acht Tage lang vollführt.*" Cf. also Sahagún's summary of Ochpaniztli in Chapter 11.

3. *nappanti* is added in the *Real Palacio MS*.

4. *necaualoya* in *ibid*.

They divided themselves; they divided themselves into two equal parts. [The likeness of] Teteo innan went with a certain number; likewise as many went opposing her, keeping a skirmish against her. Thus they banished her sorrow, they kept gaining her attention, they kept making her laugh that she might not be sad. But if there were weeping, it was said, it would be an omen of evil. It was said that many eagle-ocelot warriors would die in war or that many women would become *mociuaquetzque* when from their wombs [children] would go.

And in this manner was the mock fighting done: first the Teteo innan [party] began to pursue the others. With her were going the great women physicians. These were Aua; second, Tlauitequi; third, Xoquauhtli. These three were her old women.

Thus did they pursue [the others]: they went pelting them. Thus did they pelt them: it was with [matted] tree parasites⁵ gathered into balls, gathered into many balls, and reeds [pressed into] balls, and cactus leaves, and tagetes flowers. And all tied their tobacco gourds to their waists. Again [the others] turned [Teteo innan] back; they went pelting them. It was not for long; it was only sometimes that they were pursued.

And when this was done they took [the likeness of] Toci⁶ where she was guarded. This was for four days that they did the skirmishing.

And when the four days of skirmishing had ended, then, upon the morrow, toward sundown, she tramped over her market place.⁷ As she came forth, the [women] physicians came encircling her. And as she came along, then the Chicome coatl [priests]⁸ received her here. And when they had received her here, then they made a circle [about her]. And when a procession had been made [about her], then she stopped in the middle of it. Then she kept scattering cornmeal there. Then she tramped over her market place for the last time before she took leave of the market place.

And when she had gone tramping over it, then they took her where she was guarded in her temple. Much did the [women] physicians console her.

They said unto her: "My dear daughter, now at last the ruler Moctezuma will sleep with thee. Be happy."

They did not tell her of her death; it was as if she died unaware. Then they adorned her, they arrayed her.

And when midnight came, then they took her [to the temple]. No one at all spoke, none talked, nor did anyone cough; it was as if the earth lay dead. And everyone gathered round in the darkness.

And when they had taken her to where she was to die, then they seized her. They stretched her out on the back of one [of them]. Then they quickly cut off her head. And when they had cut off her head, then also they quickly flayed her; they swiftly flayed her. And when they had flayed her, then a man [a priest] quickly put on her skin. He was called Teccizquacuilli — a very strong [man], very powerful, and very tall.⁹

And her thigh they had then also quickly flayed; they hastened it there to Pochtlan. [The likeness of Toci's] son put it on. His name was Cinteotl. There he went to take it.¹⁰

And when this was done, when the Teccizquacuilli had [donned] her skin, then she quickly placed herself here on the edge [of the pyramid].¹¹ As she quickly placed herself here, it was with great speed. Then she quickly came down. There followed her swiftly, on each side, two of her Huastecs coming [with her]. And the offering priests went helping her. They went behind her; they went crowded about her; they went guarding her.

And a number of noblemen and great brave warriors were awaiting her. And when already she went, then they set forth; they went spreading out before her; they went gathering before her. Much did they run; much did they hasten; as if they flew, so did they run. They kept going to turn back toward her; they went striking their shields, they went striking their shields against each other. Also they swiftly turned to her; they kept crowding, they kept pressing as they ran. There was much fear; fear spread over the people; indeed fear entered into the people.

And when they thus ran, it was called "They fight with grass"; because it was indeed grass, it was indeed straw [brooms] that each of them went carrying in their hands; they were bloody; they were

9. We use "the likeness of" to refer to the representative of the goddess Toci (Teteo innan) until her ritual death. The priest who subsequently put on her skin is referred to as "the impersonator."

10. For the purpose of distinguishing the acts of the impersonator of Toci from those of the impersonator of Cinteotl, the former is referred to in subsequent passages as a woman (*she*) and the latter as a man (*he*).

11. Corresponding Spanish text: "*luego se leuantaua al canto del cu.*"

covered with blood. And when [the impersonator and her companions] set upon [the warriors], they just were scattered; they dispersed. Greatly were they terrified.

And when [the impersonator] had gone arriving at the base, at the foot of [the Temple of] Uitzilopochtli, then she raised her arms, she spread her arms at the foot of [the Temple of] Uitzilopochtli. She placed herself facing [the god]; then she turned about; she placed herself by her son, Cinteotl.

Here this one had been waiting. He had with him his thigh[-skin] mask,¹² and he had put on his peaked cap, curved back and serrated. And this [cap] was given the name Itztlacoliuhqui, "curved obsidian knife."¹³ This [Itztlacoliuhqui is god of] frost. [Cinteotl] went accompanying [the impersonator]; they went along together. They did not run; it was only at their leisure that they went along. There they went facing, there they slowly approached [Toci's] temple, where [the likeness of Toci] had died. Again they took their places there.

And upon the morrow, when there was the breaking of day, the rising of daylight, then [the wearer of the skin of Toci's likeness] placed herself here upon the edge [of the pyramid]. And every one of the noblemen already stood awaiting her. There was hastening upward. Then they each ministered unto her.¹⁴ One of them applied feathers to her head and her legs, with soft eagle down; one of them painted her face; one of them offered her her shift with the eagle design, and her skirt, which was only painted; one of them beheaded quail for her; one of them set incense before her. It was all very swift. Then it was quiet; then there was departing on the part of each.

And when there had been departing, then came forth her great vestments, called her paper crown and her market place banners. And her paper crown was wide; in the middle a market place banner went upright. There were five: in the middle a market place banner went erect, and four were on the sides, two each. They each went in order. [This head-dress] was called *meyotli*.¹⁵

12. Corresponding Spanish text: "Este cinteutl era vn mancebo: el qual lleuava puesto, por caratula, el pellejo del muslo de la muger que aujan muerto." Garibay ("Relación breve," p. 307) translates *imexaiac* as "máscara de muslo."

13. This headdress is illustrated in the Tonalamatl of the *Codex Borbonicus* and of the Aubin Collection.

14. *quiltlamamaca* in the *Real Palacio MS*.

15. According to Seler (*Gesammelte Abhandlungen*, Vol. II, p. 501), *meiotli* is to be read as *miotli*, derives from *miitl* (*pfeil*), and means "Ausstrahlung." He sees it as the headdress of Teteo innan pictured in the *Codex Borbonicus* for the month of Ochpaniztli. In Sahagún, Garibay ed., Vol. IV, p. 342, Garibay derives the word from *meitl* (*maguety*), and translates it as "Hilera de maguetyes." It is *meyotli* in the *Real Palacio MS*.

And when they had attired her, then four captives were given first place before [the other captives]. Then they stretched one of them out on the offering stone; she herself slew him. She opened the breasts of each of the four; in like manner did she do.

When she had slain the four, then she left [the others] in the hands of the fire priests, that they might slay the rest of the captives. Then she went where [earlier] she had gone to get her son; she went to bring her son, Cinteotl or Itztlacolihuiqui. Her Huastecs led her; they went at a distance from her. They were adorned with their rope breech-clouts and their mirrors for the small of the back, their cotton blossoms, with the precious feather spindles [with unspun cotton].

And the [women] physicians and the lime vendors went ranged on both sides. They went singing. The old priests went intoning a song for them. They were beating a small horizontal drum to which was fastened a small water gourd. Hence it was called "the hanging gourd."¹⁶

When they had gone reaching the place of the skull rack, then [the wearer of Toci's likeness's skin] tramped upon her drum.¹⁷ And the seasoned warriors already stood awaiting [Cinteotl]. From there he departed with his thigh[-skin] mask in order to leave it in enemy land. From there the brave warriors departed. They went surrounding him — the strong, the agile ones. Swiftly did they run.

And when they who there placed [the mask] had gone to reach the land of the foe, upon the mountain top, one of the side peaks of Iztac tepetl, a place called Popotl temi, not without struggle did they put it in its place. [The foe] set upon them, or else they pursued [the foe]. On both sides there were deaths.

And when they had gone setting her thigh[-skin] mask upon a wooden frame,¹⁸ then there was quick departing. Then also the foe went.

And when this was done, when [the wearer of the skin of the impersonator of] Toci had gone leaving her son, thereupon she went to her home there at Atempan. Then there was an assembling of the brave warriors, all the shorn ones, the leading

warriors, the generals, the commanding generals,¹⁹ and all the seasoned warriors, the chosen ones, the respected brave warriors, those valiant of their own will, who set no value upon their heads, their breasts, the fearless of death who in truth hurled themselves upon our foes.

And when this was done, when there had been the assembling, then there was their arranging in order, their placing in rows, before Moctezuma. He was seated upon the eagle mat; this was verily the flayed skin [with feathers] of an eagle upon which he was seated. And he was reclining upon an ocelot [skin] seat with back rest. It was in truth the hide of an ocelot with which the seat was covered.

Each one stood saluting him. Before him lay all the various devices, shields, and clubs set with obsidian blades, and the capes, and the breechclouts.

They stood saluting him. Then each one stood taking his gifts. They went there where was the adorning, the putting on of devices. To the great brave warriors was given this costly array. But to all of those who were only commoners were given the Huastec devices.²⁰

And when this was done, when it was concluded, when there had been the arraying, then once more there was their arranging in order before Moctezuma. Each one stood saluting him. Then they came forward; they went up there.

And when the dancing took place, the hand-waving dance was danced. Those to whom insignia had been given, who went there, displayed their devices there. And the devices which thus had been given them became their reward, which became like what was their covering. And in this manner was the hand-waving: they went in various rows as hath been said; they moved like flowers. They indeed went in glory.²¹ They kept circling the temple.

And all the onlookers, the beloved old women, all the beloved women, raised a tearful cry; their hearts were compassionate.

They said: "These are our beloved sons whom we see here. If in five days, in ten days, the sea, the conflagration are announced,²² that is, war, will they

20. See Seler, *Gesammelte Abhandlungen*, Vol. II, pp. 604-606. Seler mentions a pointed, cone-shaped hat; a disc or rosette fastened to the hat; a crescent-shaped nose plate; a golden ear pendant; and spindles. Either these relate to the wars of Axayacatl among the Huasteca or else "the Mexicans wore [them to proclaim] themselves to be the servants, followers, likenesses of the old mother of the gods, Teteo innan, the Huastec earth goddess, . . . mother and inventor of war, . . . who was supposed to be at home among the Huasteca, and perhaps was actually received by the Mexicans from there."

21. *mauizcotiui* in the *Real Palacio MS*.

22. Cf. Dibble and Anderson, *Book VI*, p. 244.

perhaps come returning? Will they perhaps come making their way back? Verily, they will be gone forever!"

And [the wearer of the skin of the likeness of] Toci, and her Huastecs, and the [women] physicians went apart [from the others]; they went dispersed behind [the dancers]. They alone went singing. Thus did they sing: it was a high falsetto; like a mockingbird they raised their song. When the hand-waving dance began, it was midday, and when it stopped, with it the sun set.

And when dawn broke, when it was the next day, again there was an assembling; still there was also dancing the hand-waving dance. None ceased, indeed even once. Then, later, insignia were offered to the noblemen, no longer to many but to some. And those which they were given were very costly insignia, with much gold, covered with gold, with many quetzal feathers, full of quetzal feathers.

And when they had been given them, thereupon they went to perform the hand-waving dance. Moctezuma led it; in great glory did he go. Before the people they displayed the insignia; for a great distance did they scintillate; much did the devices gleam.

And when this was done, when it had ceased,²³ then it was already late afternoon. Then came forth the Chicome coatl [priests], who were also the impersonators of the *tototecti*, who had also died when Toci[']s likeness] died.

Then they came forth from their temples. They strewed seeds [of maize] there at [what was called] the banquet table of the devil [Uitzilopochtli,²⁴ a small pyramid which was] not very high. And when they had climbed up, then they each flung forth, they each dispersed here, they each scattered here on the people the seeds — white maize grains, yellow maize grains, black, red; and squash seeds. As if there were stealing, as if there were scratching up, gathering up, there was indeed continued brawling over it.²⁵

And the maidens who belonged with the Chicome coatl [priests] were known as offering priestesses. They bore upon their backs the ears of dried maize, seven ears each, each ear of dried maize painted with liquid rubber. And they wrapped them each in paper. And they were with precious capes. The

offering priestesses who carried them on their backs had their faces painted; [their arms and legs] were pasted with feathers. Also they went singing. The Chicome coatl [priests] intoned the chant for them.

And when this was done, when they had scattered the seed,²⁶ thereupon they went to hide themselves away. Thereupon came down the [white] chalk and [white] feathers; they lay in a wooden vessel above [in the Temple of] Uitzilopochtli. And he who brought down the chalk was the fire priest. When he had come reaching the bottom, then he placed it there on the landing.²⁷

And when he had placed it, then set forth the brave warriors. They ran hard; they ran fast. In truth those who ran swiftly, those who were agile, appeared there. He who went leading quickly took up feathers.²⁸ Then they billowed up. Thereupon there was falling upon [the feathers] as [the others] went off with them. Then they left; indeed they ran off.

And Toci[’s impersonator] there stood awaiting them; she stood facing them. Then she sent them forth; she set after them; she pursued them; she went crying war cries. And when Toci[’s impersonator] went, everyone spat at her; anyone whose flowers lay in his hands spat at her; he cast [the flowers] at her.

And Moctezuma also ran with the others. He followed them only a little way; sometimes he quickly entered the Bird House;²⁹ sometimes he quickly entered [the Temple of] Tecanman.³⁰ And everyone [else] went stopping when they left her; there were only few who indeed brought her, who indeed left her there at Tocititlan. However, the offering priests did not leave her; rather, they went guarding her.

And when they had arrived, then they took her up to the top of a wooden [structure]. Well did they set in place [the skin so that] its head looked forth. Similarly they made an end of all her adornments.

Thirty-first Chapter, which telleth of the feast and the debt-paying which were observed during all the days of the twelfth month, which was named Teotl eco.¹

The twelfth feast day was the one named Teotl eco.

After five days,² right there began the placing of the fir [branches].³ The fir [branches] were [really] reeds, which they bound together in threes. Only the youths placed them everywhere on the small pyramids in the temples of the Cuateteo,⁴ and everywhere in people's homes where were kept the images of the devils.

And when they were placing fir [branches] everywhere in people's homes, [the householders] gave [the youths] perhaps a small basket of dried grains of maize, or else four ears of maize; in some places, three ears of maize; if [the householder] were very poor, it was two ears of maize⁵ that he gave them. It was stated: "They are tongs,"⁶ for the youths ate the maize toasted on the embers. And no one just idly ate the maize toasted on the embers; only those who were diligent, acceptable, careful, wakeful, who trusted not [too much] their [own] diligence.

And on the third day of placing fir [branches], at that time arrived Telpochtli, named Tlamatzincatl.⁷ He came here ahead; this one arrived first. For this reason did he come here ahead: he indeed still was a youth; he was still strong; he had calves [to his legs]. For this reason he arrived here first.

And they laid out an offering for him; that which they offered him was fish amaranth seed dough. First they roasted [the seeds]; they broke them up on an earthen griddle. Then they ground them up. And when they had ground them up, then they

1. *Teteu heco* — *Los dioses llegan*, in Garibay ("Relación breve," p. 307). Clavijero, *Historia Antigua*, Vol. III, p. 165, refers to *teotl eco* as *la fiesta de la venida de los dioses*. The spelling "Tetl eco" is in the *Florentine Codex*.

2. The Nahuatl text should read "fifteen days." The rituals described took place during the last five days of the month. Sahagún's corresponding Spanish text reads: "*A qujnze dias andados, deste mes, enrramauan vnos altares, que ellos llamauan momoztli*." See also Sahagún's summary of the month in Chap. 12.

3. See Chap. 23, n. 4. In the Spanish text of Chap. 34 (Panquetzaliztli), fol. 83, Sahagún explains that "*por ramos lleuauā cañas verdes, y espinas de maguey*," and in Chap. 25 (Etzälqualiztli), fol. 41, "*luego yuan a cortar ramos que llaman acxoiaitl: y donde no auja estos ramos, cortauan cañas verdes, en lugar de acxoiaitl*."

4. See the Eighth Movable Feast in this volume.

5. *olotl*: maize cob in Sahagún, Garibay ed., Vol. II, p. 34; however, Sahagún usually renders it maize ear.

6. "*cueruo, o tenazuela . . . para comer granos de mayz tostado en el rescoldo*" (Molina, *Vocabulario*). In the corresponding text, Sahagún states: "*llamauan a esto cacalotl, como qujen dize aguinaldo*."

7. These names are synonyms for Tezcatlipoca. Cf. Chap. 12 and Sahagún, Garibay ed., Vol. I, p. 152.

moistened them with water. Some they moistened with honey. Perhaps four pieces, perhaps five pieces it was that they made into balls. They went filling a wooden vessel. Then they went off carrying it. When they arrived in his presence, then they put it in place; they put it in place for him.

And when it was already night, then there was pulque drinking; there was the drinking of pulque. It was the esteemed old men, the esteemed old women [who did so]. Thus they said: "It is said they bathe [the god's] feet."

And when the fourth day came, then ended the placing of the fir [branches]. At that time they threw away the fir [branches]. And when the fifth day came, it was in truth the time of Teotl eco, with which ended the twenty days.⁸

It was midnight when [the priests] made cornmeal. They pressed it together hard; they pressed it together. They made it circular. It was on a reed mat that they placed it.

When it was time that the gods were reaching here, were arriving, they made preparations. They all set themselves in action, since the gods were arriving.

And the old priest, [the god's] old man, named Teohua [the god's keeper], kept going back to look upon [the cornmeal on the mat]. Often he looked upon it. He never sat down; his only office was to look on it. Never did he get off his feet when he was looking on the cornmeal. It was called "his foot."

And when [the god] arrived, [the priest] saw there a little foot[print], which was there on the cornmeal or at its edge. When [the god] stood upon the cornmeal, he crumbled the cornmeal.⁹ It then appeared that the gods had indeed arrived.

Then he who kept the god said to them: "Indeed the lord hath deigned to come."

When this was heard, then [the priests] came together to go in procession, while shell trumpets were blown. It became generally known; then it was known that indeed the gods had arrived.

And all the common folk then went; there was going on the part of each one to lay offerings, each one, in their temples, the temples of the devils. All offered them balls of dough.

8. Cf. note 2. Corresponding Spanish text: "al quinto día, era la fiesta de teutl eco, es la llegada de los dioses, que era el último día deste mes."

9. The word *xitinia* is explained by Garibay ("Relación breve," p. 307): "Auh quil mach in icuac vallacia teteu xitinia in iuhqui xamiil tlautextli" — "y dizque cuando venían los dioses, se partía el como adobe de harina de maíz."

And when each had made the offerings, then all was still.

And when already night fell, in the same manner as they had done [previously], the old men, the esteemed old women each drank pulque. It was said: "They bathe the feet of the gods who have arrived."

And when it was the next day, it was the time that Yacapitzauac arrived; this one was Yiacatecutli; he was the merchants' god. And Ixcoçauhqui: this one was Xiuhtecútlī; he likewise was the merchants' god. These came here only at the last, they came here only following, they came here only last of all because indeed they were already old.

And at this time then there began the casting [of victims] into the fire there on the large altar.¹⁰ Indeed many were the poor captives whom they cast into the fire.

And when they were being cast into the fire, [one arrayed as a] squirrel went dancing there. He was ornamented only with a small crest of feathers on his head; he had a crest of feathers. He had bi-colored face painting. He went carrying his carrying frame on his back; in there went lying a small dried rabbit. When they cast one into the fire, [the dancer] whistled repeatedly through his fingers.

And one [in the likeness of a] bat was there. He went dancing. Indeed like a bat was he arrayed.¹¹ He had two gourd rattles. They were in each hand as he went rattling the rattles.

And when the captives had been cast into the fire, then the offering priests formed themselves into rows in order to descend here. They had their paper stoles, which were painted with designs.

They grasped one another; with their hands they grasped one another; very firmly they grasped one another. When [in the line of procession] they were cut off, when they were in a gap, it was as if each one was thrown off. Some thus struck the ground; they quickly bit the earth. This was called *mamatlauitzoa*.¹²

And next day there was the assembling of each one, at the same time; there was a serpent dance. There was the decking of each one with feathers — yellow, chili-red, dark brown, blue-green. Thus were they decked with feathers — [even] all the small

children, although they [still] lay in the cradle; indeed everyone, [but] only the males.¹³

Thereupon was begun the serpent dance, at mid-day. There was grasping of one another; there was singing. It was no matter what they intoned; just pleasure songs. And when there was stopping on the part of each, it was already dark. And he who was taking much pleasure indeed remained there until night fell.

And these two festive days they had already taken from Tepeilhuitl, [the next month].

Enough. Here ended, here concluded the feast [of the month] Teotl eco.

13. This ceremony is further described in the appendix of this volume.

Thirty-second Chapter, in which are related the feast day and debt-paying which were observed during all the days of the thirteenth month, which was known as, which was called Tepeilhuitl.¹

The thirteenth feast day was known as Tepeilhuitl.²

All the [wooden] serpent [representations] which were kept in people's houses, and the small wind [figures]³ they covered with a dough of [ground] amaranth seeds.

And their bones were likewise fashioned of amaranth seed dough. They were cylindrical. Either fish amaranth⁴ or ash amaranth [was used].⁵

And also they fashioned [images in the form of] mountains [for] perchance one who had died in the water, who had been drowned, or else had been struck by lightning.

And [for] whoever had died who had not been burned, who had only been buried,⁶ they also at this time made representations of mountains. They made them all of amaranth seed dough.

And upon the eve of the feast, toward sundown, there was the bathing or the washing of the surfaces [of the figures' frames].⁷ When they bathed them there, they went blowing wind instruments for them; they went blowing pottery whistles and little seashells.

And they bathed them there at the Mist House; with fresh cane shoots they washed their surfaces. And some bathed them only at their own shores.⁸

And when they had been bathed, then they were returned here; in the same manner they came blowing wind instruments for them; it was as if they

1. "Fiesta del cerro," according to Garibay ("Relación breve," p. 308); "Fest der Berge," in Seler, *Einige Kapitel*, p. 189.

2. After *tepeilhujtl* the *Real Palacio* MS adds: "no cempoalilhuitl ynic moteneua tepeylhuitl" — "also twenty days. For this reason was it known as Tepeilhuitl."

3. See the explanation of *cocoa* and *ecatotonti* in Chap. 13. Juan de Torquemada, in *Segunda parte de los veinte i un libros rituales i monarquia indiana* (Madrid: Nicolas Rodrigo Franco, 1723), p. 279, writes: "Para cuja solemnidad, lo primero era, hacer unas Culebras de palo, ò de raices de Arboles, labrandoles las cabeças, lo mas pulidamente que sabian. Hacian tambien de trocuelos pequeños unas figurillas, à manera de las Muñecas, que acostumbraban las Niñas, en nuestra Nacion Española, las quales llamaban Ecatotonti. . . ."

4. According to Garibay, in Sahagún, Garibay ed., Vol. IV, p. 343: "Michyauhili. — 'Bledos de pez.' . . . Prob. la misma que la Argemone mexicana (*Chicalote*)."

5. Cf. *ibid.*, p. 286.

6. Torquemada, *Segunda parte*, p. 279, further explains: ". . . en memoria de algunos difuntos, en especial de los que se avian abogado en Agua, ò avian muerto de muerte, que no pudieron ser quemados sus cuerpos, ò fueron enterrados por alguna causa."

7. Both Sahagún (corresponding Spanish text) and Seler, *Einige Kapitel*, pp. 190–91, differ from this version. In Sahagún, the people wash the mats upon which the images rested; in Seler, the people are washed.

8. Corresponding Spanish text: "el agua, que passava junto a su casa."

came shouting. Thereupon they were given human form; they were adorned. They gave them their foundation.

And some gave them their foundation well on into the night. Thus did they give them human form: they applied liquid rubber to the faces [of the figures]⁹ and they placed [a spot of] fish amaranth upon [each] of their cheeks; they dressed them in paper banners and they fitted them with their paper headdresses, their forked heron feather ornaments.

And for those who had died in the water, they placed their images only on circular jar rests of grass.¹⁰ They made [the images] of amaranth seed dough.

And when it dawned, then they were set up in each one's house upon reed foundations made perhaps of thin, fine reeds; perhaps of wide reeds; of large white reeds; perhaps of hollow reeds.¹¹ On these they placed them.

And when this was done, when they had arranged them, thereupon they laid offerings before them. They offered them fruit tamales, and stews, or dog meat, or turkey hen. And they offered them incense.

And at this time it was stated: "They are laid in the houses." And where there was riches,¹² there was singing, and there was drinking pulque for them. But elsewhere all they did was make offerings to them.

And upon the feast day there died some women who were representations of the mountains.

The first was named Tepexoch; the second, Matlalcueye; the third, Xochtecatl; the fourth, Mayaue, representation of the maguey. The fifth was named Milnauatl; this one was a man who represented a serpent.

Their array, their paper headdresses, their paper vestments were painted with liquid rubber; they had much rubber; they were full of rubber. And the adornment of Milnauatl was in the same manner.

Early in the morning they started them off. They went carrying them in their arms on litters. It was stated: "They provide them with litters." There they each went; there they each sat up in the litters. They took them in a roundabout procession. Only

the women carried [the litters] in their arms.¹³ They went singing for [the victims].

And [the women] who carried [the litters] were well arrayed; they were properly set up. All new were their shifts, their skirts, which they had put on them. And their faces were painted; they were pasted with feathers.

And when it was the time for it, when it was time for them to die, thereupon they set down the litters. Then they were each brought up [to the top of the pyramid]; they went leaving each one there at [the Temple of] Tlaloc. And when they had brought them there, then they stretched them on the offering stone. Then the officiating [priests], the slayer stood forth. Thereupon they cut open their breasts.

And when [the victims] had given their service, when they had died, then they brought [their bodies] down here. And thus did they bring them down here: they only went rolling them here; it was slowly that they went turning them over and over.

And when they had come bringing them down, then they took them to the skull rack. And when they had taken them [there], then they cut off their heads; they decapitated them. There they inserted into their heads [the crosspieces of the rack].

And when they had cut their heads off, their bodies they then took to the various *calpulcos* [whence the victims had been sent]. And next day, at dawn, when it was said, "They are dismembered," they were each dismembered.

Thereupon they dismembered the amaranth seed dough [figures]. And when they had dismembered each one, then they took them up to the roof tops. There they dried hard, they dried stiff. Little by little they went taking some of it when they ate it; gradually they finished it.

And with the paper array which had been [theirs] they covered the circular grass jar rest which they had [used]. And when they had covered them, they hung them from the roof of the *calpulco*. For one year they went caring for them; [then] they went to throw them away, they went to scatter them there at the Mist House. Only the paper vestments did they scatter; but the circular grass jar rests they brought back.

Here ended the feast day which was called Tepeilhuitl.

13. *tenapaloo* is added in *ibid.*

Thirty-third Chapter, in which are related the feast day and the debt-paying with which they gave service, which they observed during all the days of the fourteenth month, which was called Quecholli.¹

The fourteenth feast was the one called Quecholli.

When Tepeilhuitl ended, nothing was done for another five days.² All still remained quite quiet.

And when the five days had passed, upon the next day there was an offering of reeds there; each seasoned warrior took a load upon his back in Tenochtitlan, in Tlatelolco, when reeds were offered there at the foot of [the Temple of] Uitzilopochtli. And when they had been offered, then [others] came carrying them; they each bore them upon their shoulders [to their homes].

And, upon the morrow, once again there was going to the courtyard of [the Temple of] Uitzilopochtli. They were to straighten them over a fire; the reeds were to be straightened over a fire. Only this was still all that was done. And when they had been straightened in the fire, once again they were borne away; once again their burdens went away with them.

And on the third day, once again there was going. The reeds were carried. Indeed all moved together — seasoned warriors, youths, young men of marriageable age. And the small boys they took, each one, up [the pyramid] to the temple. There they each sat blowing shell trumpets, and they sat bleeding themselves. They cut their ears; they pressed out their blood; they anointed their temples [with it]. It was said: "They anoint themselves with blood because of the deer." They fasted for the deer, so that [the deer] would be hunted.

And when there had been assembling in the temple courtyard, those of Tenochtitlan were spread on one side, those of Tlatelolco were spread on the other side. Thereupon spears were made. It was said: "Spears are born, or their [points] of oak."

1. Quecholli: "Pájaro 'flamenco' (Platalea ajaja)" in Jiménez Moreno, "Primeros memoriales," p. 52. The *teoquechol* or *tlauhquechol* is identified as *Ajaia ajaja*, "roseate spoonbill," in Dibble and Anderson, *Book XI*, p. 20. Torquemada, in *Segunda parte*, p. 280, writes: "... nombre de un Paxaro de pluma azul, y colorada, que ai en esta Tierra, en especial en vnos manantiales, y ojos de Agua, que ai junto del Pueblo de Quebolac."

Tovar, while mentioning the bird of rich plumage, adds that captains raised their banners and performed warlike exercises. He describes it as a month of unrest and dissensions (Kubler and Gibson, *The Tovar Calendar*, p. 32).

And at the time that the spears were being born, there was fasting; they fasted for them. Everyone anointed himself with his blood. And if anyone was seen who did not anoint himself with his blood, they repeatedly stripped him; nevermore did they give him his cape. The overseers took it from him for good.

And when spears were being born, no [man] lay with a woman. And the old men drank no pulque; they became not drunk. They abstained; they abstained from pulque.

And when spears were being made, their measure came forth. They were made all quite the same, and the bolts were all quite the same. None were unequal in length; on none did they make changes.

Thereupon the reeds were cut. They went to put them in the hands of those who fitted the bolts, those who put on the bolts. Well did they tie the [ends of the] reeds with maguey fiber; well did they keep binding them with maguey fiber, so that the bolt would not split back. They set [the points] in glue so that they would indeed hold fast, so that they would be well embedded.

And when they had [thus] prepared them, thereupon they applied pine pitch to the heads and the ends. This was done quite quickly.

And when they were finished, thereupon they were bound together at the middle; in twenties were they bound together at the middle. And when they were assembled, thereupon there was their arranging in rows, their ordering in line, their arranging in file to leave [the bundles] there at the foot of [the Temple of] Uitzilopochtli. There they heaped them together. And when they had come to make [this] offering, then there was departing on the part of each one [to their homes].

And the fourth day was called "They are made to live in the houses." Everyone used arrows, each one at his home, only to amuse themselves with them. Yet there were continual trials of skill with them; there was continual learning with them. They would put up a maguey [leaf] at a distance; they shot arrows at it continually. There appeared some who could knock it down, those who were dexterous, who shot arrows well.

And upon the fifth day one was concerned only with the dead. For each of them were made very small arrows, each one of a hand's length.³ Also

they applied only a little resin on each one. And their bolts were only sticks. They bound four arrows [and] also four pine torches about the middle with loose cotton thread; they laid each [bundle] where the dead lay buried. And they placed on each one two sweet tamales. There they stayed all day. And at sundown, they thereupon burned them for [the dead], in the same place. There they set them on fire.

And when they had burned, they buried their charcoal and their ashes there.

And the streamers, and the costly banners, and the shields, and the capes, and the breechclouts of those slain in battle they placed on a dry maize stalk. They tied them on. From it hung loose, twisted, red cotton thread. At its end went hanging a [dead] hummingbird and four hundred [white] heron [feathers]. They pasted many cords with feathers. At the ends heron [feathers] went hanging. They left them in the eagle vessel; there they burned.

And of the sixth day it was said: "There is issuing on the grass."⁴ And for this reason was it said, "There is issuing on the grass": grass was scattered [in the Temple of Mixcoatl]; it was pine-tree grass.⁵ There were ranged the old women [who served in the temple]. Before them lay a mat.

Thereupon came forth women with children. Each one heaped upon the mat five sweet tamales. All together, by fives, they laid them down. They came to give their children to the old women. And the old women came to take the children; then they dandled them in their arms. Then, when they had dandled them, they gave the mothers [back] their children.

Then [the mothers] departed to their homes. It was yet early morning when this started. And it was already time to eat when it was finished. And when this was done, thereupon⁶ there was the departure to hunt. They went to come upon Çacatepec, there at Ixillan tonan.

And at the end of ten days of this month, as hath been said above, they there celebrated a feast in

honor of the god of the Otomí, who was named Mixcoatl, which in its time will be told.⁷

And when there had been arrival at Çacatepec, nothing was done; there was only each one's arriving; there was the making of grass shelters on the part of each one. There was sleeping there on the part of each one. There was the lighting of fires on the part of each one; there was being warmed by the fire on the part of each one.⁸

And at dawn, thereupon food [and] drink were eaten [and] drunk. Thereupon there was arraying, there was dressing on the part of each one.

Then there was departing; there was arranging in order, there was disposing in rows. Like a rope they stretched; nowhere was it cut. Everyone in this manner encircled all the deer, coyotes, rabbits, jack rabbits.⁹ Cautiously they closed in upon them.

And when they were able to come upon them, then there was the seizing [of the game]; it was fallen upon on the part of each one. All that escaped their hands did not yet die.¹⁰

And when this was done, thereupon they dispersed. There was returning. But the captors were still left there; they yet slew [more game]. To those who yet caught a deer or a coyote, Moctezuma gave gifts of capes whose edges were striped with feathers.

If one were a captor, one would array oneself [in it]. But if one were not a captor, one would place it in a basket or one would sell it. And Moctezuma gave the captors food, and they drank.

And when the slaughtering had been done up on Çacatepec, thereupon there was a quick departure. They took with them only the heads of [the game]; they carried them each with them in their hands; they went dripping blood. When they reached their homes, they hung each [of the heads] high. And they left Moctezuma there [in his palace].

And when there was going forth on the grass, at that time they would give their paper vestments to as many as were to die. For [the god] Tlamatzincatl¹¹ many of his bathed sacrificial victims were arrayed. For the second [god], Izquitecatl, perhaps

11. Tlamatzincatl was a Chichimec pulque god and is to be distinguished from the same name as applied to Tezcatlipoca in the month of Teotl eco. Cf. Seler, *Gesammelte Abhandlungen*, Vol. II, p. 481.

two or three. Those who bathed [the victims] were the pulque makers and the ruler's pulque makers.

Third, there died for Mixcoatl and his consort, a woman named Yeuatl icue, only two [victims]. Only the stewards displayed them. And also there were the women [each named] Coatl icue, wives of Tlamatzincatl and Izquitecatl. These also took upon their heads their paper array.

And when [the time] had arrived, when it was verily the feast of Quecholli, with which the twenty [days] ended, there was going into the sand there;¹² those who were to die went into the sand there. After midday they then took them to the place where they were to die. They took them in procession about the offering stone; they went in line. And when they had come to encircle it, then they came down [from the pyramid]. No longer were they taken where they had been guarded; they only took them to their various *calpulcos*. There they kept them in vigil all night. They guarded them; they continually guarded them.

And when midnight arrived, thereupon there was the taking of hair [from the crowns of their heads]. And when they had taken the hair, thereupon [their belongings] were burned. [If the bathed one was] a man, he burned his streamers, and his cape, and his breechclout, and whatever his comforts had been, and his water gourd. All of them he burned.

And a woman burned all her womanly belongings: her basket, her spindle whorl, her chalk, her spinning bowl, her warping frame, her cane stalks, her batten, her large straw for weaving, her divided cord which held up [the textile], her waist band, her weaving stick, and her thorns, and her skeins, her heddle, and her measuring stick.¹³ All of it she burned herself.

For this reason they thus did it: it was said that they would be required there where they were to go; when they died, [these things] would await them there.

And when it dawned, then they were adorned, they were arrayed. They put on them their paper vestments in which they were to die. When they had arrayed them, then they were taken where they were to die. Two escorts took them; they were to take them up. Lest they faint somewhere, they held them tightly. And the two were to bring them down,

they were to bring them down here when they had died. And there was one flag-bearer who went carrying a flag. And there were two women who were face-washers. Thus they took each one of the ceremonially bathed [victims].

And when they had brought them [there], four captives went ahead to die. At the landing at the foot of the pyramid they bound their feet and their hands. Then they took them up; four [priests] carried each one of them; they went pulling them by their arms [and] their legs; [the captives] went bobbing their heads up and down; their heads went hanging toward the ground.

And when they had brought them, then they stretched them on the offering stone. There they slew them.

And as they took them up, it was said: "Thus they slay them as deer; they serve as the deer who thus die." And the rest of the captives climbed up purely of their own will. And when they had died, when they had given their service, then [the likeness of] Mixcoatl died. And when he had died, at the Temple of Mixcoatl, then [the likenesses of] Tlamatzincatl died; they died there at [the Temple of] Tlamatzincatl. And thus did they die: they climbed up purely of their own will; of their own accord they ascended. Then they went straight to the offering

Inin tzonqujça, ie cuel ipan icemjlhujtlapoaloc in Panquetzaliztli:

njcan tzonqujça in Quecholli.

Thirty-fourth Chapter, which telleth of the feasts and the debt-paying which were observed during all the days of the fifteenth month, which was called Panquetzaliztli.¹

The fifteenth month was the one known as Panquetzaliztli.

Before the feast of Panquetzaliztli arrived, the offering priests had been fasting for eighty days and had been laying down fir [branches]. The time that they began this was thus the day following [the month of] Ochpaniztli. At midnight they spread out the fir [branches] on all the mountain tops and upon the circular altars, [even those] which were distant.

And this they did until [the month of] Panquetzaliztli arrived. When they were laying down the fir [branches], they went quite naked; nothing went on them. They went carrying fir [branches; actually] they were green reeds and thorns. And they went blowing their shell trumpets and the pottery whistles. They went alternating them as they blew them.

And when the feast of Quecholli ended, then began the singing and dancing. The song which was intoned was called Tlaxotecayotli; it was the song of Uitzilopochtli. When it was begun, it was at the time that night fell, and when there was stopping on the part of each one it was at the time that the conch shells were repeatedly blown, when already the conch shells were blown.

And with one the women, the pleasure girls, sang and danced. They went between [pairs of men] (as hath been told). Daily they did this until twenty days [had passed].

And when the ninth day [before the feast] arrived, there the ceremonially bathed [victims] or those to die the flowery death were bathed in sacred water.² The old men of the *calpulli* would get the water; they got the water there at Uitzilopochtli; there indeed was [the spring called] Uitzilatli, in a cave. With cypress [branches]³ they went stop-

ping each [jar mouth]; they each went holding [the jars] with them.

When they had carried [the water] here, there-upon they sprinkled it upon [the victims] there at the foot [of the Temple of] Uitzilopochtli, and there they gave them their paper vestments, their paper adornment, in which they were to die. And they painted blue stripes on them, on their legs up to their thighs and on their arms up to their shoulders. And their faces they stained in horizontal stripes;⁴ they each went striped in light blue [and] in yellow. And they placed on them nose pendants [shaped like] arrows,⁵ and reed headdresses surmounted by feathers.⁶

And when this was done, when they had adorned them, when they had prepared them, then [the bathers, who owned the slaves] took them each to the various *calpulcos*. They only quickly took them away. Thereupon the bathers [of victims] each went to their homes. There they took apart, they set down the array [of each victim]. They placed [their ornaments] in palm leaf baskets for them. And there, with one, [the owners] began singing and dancing; they went, each one, taking their women.⁷

And when the fifth day arrived, then the bathers of [sacrificial victims]⁸ began to fast there, and the old men of the *calpullis* fasted⁹ and bathed themselves at midnight. They bathed themselves there at the Mist House. From these they departed to their *calpulcos*.

And a woman who was to bathe [sacrificial victims] just bathed herself there at her water's edge. She set up a thorn, stained with blood, on the bank. And when the four days of fasting ended, then at nightfall the serpent dance was danced. The bathed victims danced the serpent dance, as well as the bathers, and the escorts, and those who brought the victims down, and the flag-bearers, and the women who were face-washers. When conch shells were blown, [at midnight, the dancing] ceased.

And hence was it said that the serpent dance was danced: they took one another's hands; they were ranged in line. In their hands they grasped circular jar rests; it was perhaps reeds or cords which they arranged as jar rests. The bathed ones went trotting among [the others]. Much did they run; they continually hopped; they kept hurrying. It was as if they hastened, as if they were breathless. They kept winding about; they did not sing, they did not sing at all.

And the old men of the *calpulli* kept beating the drums for them; and only they sang. Some looked on; they marveled at [the dance]. And it was much admired; much was the fasting respected. Indeed everyone abstained, especially the bathers. No [man] lay with a woman, nor did any [woman] lie with a man.¹⁰

And when the serpent dance had been danced, thereupon they dispersed.

And when it dawned, on the twentieth day, when it was verily the feast day, thereupon the bathed ones went to take leave at the various [bathers'] houses. They dissolved stains for them: black; perhaps blue mineral earth; or red ocher. And as they went to take leave at the various [bathers'] houses, they went singing as if they each cracked their voices,¹¹ as if they were hoarse. When they reached the houses of the bathers, then they dipped their hands in the blue stain or the black stain or the red ocher. Thereupon they placed their hands on the posts and on the door lintels wherever they came out of the homes of the bathers.

And when they had proceeded to the several places where their relatives were, thereupon they again went to [the bathers'] homes. These in vain offered them food. Some still ate, but some no longer ate.

And at this time, gifts lay for them. Capes lay waiting for them, breechclouts, shifts, skirts. And when the gifts were laid out, thereupon the bathed ones arrayed themselves; they put their banners on their backs. Quite of their own will they arrayed themselves. And the women likewise of their own accord put their baskets [with] all their womanly belongings on their backs. Thereupon those who bore burdens arose; they carried the gifts in their arms. At the entrance, in the street, they placed themselves in order. And the bathed ones thereupon

entered the women's quarters; they went around the fireplace. Then they came out. Then those who bore burdens went leading. They went quietly to the *calpulco*. The bathed ones only went following them; they only went last.

And when they had gone to reach the *calpulco*, thereupon the bathed ones danced in the courtyard. And they put the gifts in the *calpulco*. Also they placed aside the capes, the breechclouts, the skirts, the shifts. Then came first the bidden guests. [The bathers] offered each one of them their gifts. And the women stood apart in line. They also offered them their gifts.

And this was the doing of only the merchants, the bathers, the buyers [of slaves].

And when they had been completely arrayed, when they had come together, when they had been given their gifts, thereupon they took the bathed ones to enter into the sand.¹² When they reached the [pyramid] temple of the devil, then they climbed up to the top of the temple. When they had come to the top, then they circled about the sacrificial stone. They came right down [the other] side.

And when they had come climbing down to the ground, when they had come to reach the ground, then they each ran to the various *calpulcos*. But some went going quite slowly. When they entered [the *calpulcos*], thereupon they disposed for them their paper vestments; then they sat down on reed mats. They kept food for them, or pulque, whatever they would require. All night they had them keep vigil.

And when midnight arrived, then they ranged them in a row, while they cut hair [from the crowns of their heads]. When they had cut hair [from the crowns of their heads], then they put it away for themselves (as hath been told in [the account of] Quecholli).

And when this was done, then were eaten [tamales of] amaranth seed, all at the same time, everywhere among the common folk. None failed to eat [tamales of] amaranth seed. And none broke the amaranth seed [tamales] with his hand; it was with [a length of] maguey fiber that they sliced it. And when the amaranth seed [tamales] had been eaten, thereupon were taken up the mats. They rolled them up, they set them each down at the entrance. Thereupon there was stretching out on the part of each

only on the ground, on the cold ground. It was only of old capes or old maguey fiber capes that they made beds for themselves, that they made couches for themselves.

And upon the morrow, when still a little darkness lay about, thereupon [he who carried the figure of] Paynal came down from the top of [the Temple of] Uitzilopochtli.¹³ When he had come down here, then he went direct to [the place] called the god's ball court.¹⁴ There they slew four [victims], two [honoring the god] Amapan, two [honoring the god] Uapatzan.¹⁵ When they had slain them, then they dragged them about the ball court. It was as if they painted it with [the victims'] blood.

And when this was done, then [the priest bearing the figure of Paynal] departed. Much was he made to run. He proceeded to Tlatelolco. Then he went direct to Nonoalco. To that place there quickly took him [the priest bearing the image of the god] named Quauitl icac, [Paynal's] helper, his elder brother.¹⁶ His adornment was similar¹⁷ [to that of] Paynal, but he was striped with chalk.

And when [the latter] had quickly taken [Paynal], then [both] departed. They circled about there to Tlaxotlan. Thereupon they went straight to Popotlan. There also they quickly slew victims — very swiftly.

Then once more they went on, straight to Chapoltepetl; they passed before it. And when they had gone arriving at the river bank, at a place named Izquitlan, there also they quickly slew a victim. He whom they slew was named Izquitecatl.

Then they went on; they quickly passed on to Tepetocan. Already they were at the outskirts of Coyoacan. They then went direct to Maçatlan. There they doubled back. Then they went direct to Acachinanco.

And when they had come to reach Acachinanco, then the rolling up of the paper stopped. Those who rolled up the paper began at the time that Paynal had begun to follow his path.

And thus was the paper rolled up. The bathed ones remained in a separate group; those of Uitz-

13. Corresponding Spanish text: "*descendian el dios paynal, de lo alto del cu de vitzilopuchtli.*" The priest who carried the figure was dressed in the trappings of Quetzalcoatl, according to Torquemada, *Segunda parte*, p. 282.

14. See the description of *teotlachco* in the appendix of this volume.

15. Seler, in *Einige Kapitel*, p. 210, apparently does not regard Amapan and Uapatzan as gods. See, however, the corresponding Spanish text and the discussion of *teotlachco* in the appendix of this volume.

16. Corresponding Spanish text: "*alli le salia a rescebir, el sarapa de aquel cu, con la ymagen del dios Quavitl ycac.*"

17. The *Real Palacio MS* reads *çã no*.

nauac remained in [another] separate group. [These latter] a number of brave warriors aided. Moctezuma gave them yellow quilted cotton jackets and shields [painted with] bears¹⁸ eyes. Only pine staves lay in their hands.

And [the warriors] who aided those of Uitznauac had spears with which they battled, which they cast. And the bathed ones met them only with bird arrows, which they shot. They had flint points. Verily, battle was joined. Verily, there were deaths.

And of them who aided those of Uitznauac, if one were taken, he also would die. The bathed ones themselves slew him; it was only on a horizontal drum that they cut open his breast.

And the onlooker, he who oversaw [the battle], when he noted, when he saw that [he who bore the likeness of] Paynal already was coming, then cried out: "Mexicans! Now indeed he cometh! Now already the lord cometh! Enough!"

And when they heard this, then the bathed ones took after [the others].¹⁹ From there they each dispersed; there was dispersing. Those who aided [those of Uitznauac], who had been rolling up the paper, each went.

Thereupon came [he who bore] Paynal. First arrived the standards and two devices for seeing, made of feathers, with a hole in their midst. They who brought it here were still only small boys. Much did they make it hasten here. Then the brave warriors took [the seeing devices] from them — [warriors] who could hasten, who could run fast.

And when they had run along a certain distance, again two more [warriors] took [the devices] from them. It was as if they went sharing them.

And when they had come to reach the eagle portal [of the temple square],²⁰ no one could take these from them; they took [the devices] up to the top of [the Temple of] Uitzilopochtli. These who indeed came ahead, when they had reached the top, cast the devices for seeing upon the image of Uitzilopochtli, which [was made of] amaranth seed. [There] they each fell to the ground; indeed each one was faint; each one lay exhausted.

And the fire priest thereupon went [to] cut their ears with a flint knife so that they opened their eyes, so that they revived.

20. Corresponding Spanish text: "*hasta llegar a la puerta del patio del cu, de Vitzilopuchili, que se llamaua quauhqujiaoac.*"

And when they revived, then they climbed down; they came bringing the amaranth seed [image] which they had captured.²¹ They took it with them to their homes, for it was in truth their captive. They ate it. They offered it to each of their kin and to those of the neighborhood; they ate it all.²²

And when this was done, then those who were to die were taken in procession around [the pyramid]; only once did they circle them about. When this was done, then they were arranged, they were placed in order. The captives were in the lead. Thereupon they brought down [from the top of the pyramid] the sacrificial papers;²³ it was a man [a priest] who brought them down. When he reached the ground, he raised them in dedication to the four directions. Then he laid them there in what is called the eagle vessel.

Thereupon likewise descended the fire serpent.²⁴ It was just like a blazing pine firebrand. Its tongue was made of flaming red feathers. It went [as if] burning [like] a torch. And its tail was of paper, perhaps two fathoms or three fathoms long. As it came down, it was like a real serpent; it showed its tongue; it was as if it bent back and forth.

And when [the priest] had brought it to the base [of the pyramid], he proceeded carefully there to the eagle vessel. Then he went up [to the eagle vessel]; also he raised [the fire serpent] in dedication to the four directions. When he had [so] raised it in dedication, then he cast it upon the sacrificial papers; then they burned.

And when he had come to leave it, when he went ascending to the top, then shell trumpets were blown. Thereupon [the image of] Paynal, the representative of Uitzilopochtli, came down; in great haste [the priest] brought it down.

21. Clavijero, *Historia antigua*, Vol. III, p. 168, says such images had been made of both Uitzilopochtli and Paynal: "... fabricaban ... dos estatuas de aquellos dioses, de la pasta de varias semillas con sangre de niños sacrificados, y le ponian por huesos algunos leños de acacia."

22. In *ibid.*, pp. 169–70, Clavijero writes: "aquella noche que era la última del mes, velaban también los sacerdotes y a la mañana siguiente llevaban a la estatua de masa de Huitzilopochtli a una sala que había en el recinto del templo, y en presencia solamente del rey, de cuatro dignidades del templo y de cuatro superiores de los seminarios, el sacerdote de Quetzalcoatl, que era jefe de los tlamacazques o penitentes arrojaba un dardo a la estatua con que la atrevasaba de parte a parte. Con esto decían que ya había muerto su dios; uno de los sacerdotes le sacaba el corazón y lo presentaba al rey para que lo comiese; el cuerpo se dividía por medio y la una mitad se daba a los tlatelolcas y la otra quedaba para los mexicanos; de esta se hacían cuatro partes para los cuatro cuarteles de la ciudad, y cada parte se dividía en menudas partículas que se distribuían entre todos los individuos del sexo masculino. Esta ceremonia explicaban con la palabra teocualo, comer a Dios. Las mujeres no probaban de esta sagrada masa por razón, como se puede creer, de no pertenecer a su sexo el empleo de la guerra."

23. Corresponding Spanish text: "vn volumen grande, de papeles blancos, que llaman teteppoalli, o por otro nombre teteujil." The Nahuatl text here has *teteuhpoalli*; subsequently it is spelled *teteppoalli*.

24. Corresponding Spanish text: "Luego descendia otro satrapa, que traya vn bachon de teas muy largo, que llamā xiuhcoatl: tenja la cabeça y la cola como culebra." In Chap. 14 of Book IX (Sahagún, Garibay ed., Vol. III, p. 54), which describes the same ceremony, the priest wears the fire serpent as a disguise: "luego descendia un sátrapa que venía metido dentro de una culebra de papel, el cual la traía como si ella viniera por sí, y traía en la boca unas plumas coloradas que parecían llamas de fuego que le salían por la boca."

And when he had brought it to the ground, he passed before the eagle vessel. Quickly he passed before the captives and the bathed ones, as if he guided them. Then they ascended the pyramid steps.

When they had gone reaching the summit, first the captives died; it was as if they became the fundament of the bathed ones.²⁵ And when, first, the captives had died, the bathed ones just followed them.

And when one died, then shell trumpets were blown. Then they brought them down here; they came rolling them down. So did they with all the bathed ones.

And also there was dying in Uitznauac. They who died were only those of Uitznauac. Only they [died]; none were their fundament.²⁶

And when there had been dying, then there was departing on the part of each one. And upon the next day there was the drinking of pulque; the leftovers were distributed.²⁷ The pulque which was drunk was called blue pulque. Everyone of the old men, the old women, and the seasoned warriors of noble lineage who already had wives, the men of marriageable age, and the lords, and the leaders of the marriageable ones were those who drank pulque.

And the rulers of the youths, those who were already mature, drank pulque, but they drank only in secret. They did not disclose themselves. They hid themselves well in the dark; they indeed crouched behind bushes in order not to be seen.

And if anyone discovered them, if they made it known that indeed they drank pulque, that indeed there had been gathering together, that indeed there had been arranging among themselves, they beat them repeatedly with pine staves; they bruised their bodies sorely, and they shaved their heads like servants — they cut [the hair from] the heads of each one. They dragged them each; they went kicking them; on the ground they struck them repeatedly; they cast stones at them. Verily, they afflicted them. From time to time death came from this.

And after they had taken their pleasure [with them], then they cast them hence, they threw them out of the portals. Thus fear fell [over the people].

And in the homes of the bathers there was sing-

ing; ground drums were beaten, gourd rattles were rattled, turtle shells were beaten. Only as they were [seated] on the ground was there singing; only as they were [seated] on the ground were the ground drums beaten. Gifts were given one. They gave gifts to all who worked, who served [the guests] — those who cared for the tobacco, who were with the tobacco; and those who cared for the chocolate, who were with the chocolate, or who were with the water; and those who watched over one, who served [the guests]; and the honored women, those who were among the [cooking] vessels, who were with the tamales, who were with the meat, who set forth the meat, who stood over the meat; and those who stood over the pulque, the pulque-makers; and all those of the neighborhood. Everyone was given gifts.

And the third day [of Atemoztli] was known as "the mock-fight of the Chonchayotl." One [man] was set up as Chonchayotl; one [man] was his likeness. His hair was wild, his hair was disorderly; it was bloody; he was frightful.²⁸ And when they arrayed the Chonchayotl, then they separated [into bands]. Apart were the offering priests; with them went, with them stood the Chonchayotl. And [also] apart were the youths.

Then at midday they began fighting each other; they skirmished. They struck one another with fir branches, with fir staves, and long reeds, long stout reeds. They bound them each in the middle; they bound them firmly, they bound them tightly; they wrapped them in cords; they placed cords about them. As they were repeatedly struck, it was as if waves were breaking on the shore. Verily they harmed one another; verily they were hurt.

And if [the youths] caught an offering priest, if one were taken, they rubbed him with [ground up] maguey thorns; much did he burn; he itched. It was as if his body were deadened. And if one of the youths were taken, the offering priests bled his ears with a [maguey] thorn, [and] his shoulders, his breast, his thighs. Indeed they made him cry out.²⁹

And if [the priests] chased the youths into the palace, they looted it; they stole all the [reed] mats, the mat cords, the seats with backs, the couches, the backless seats. And if they found horizontal drums, ground drums, they took away all; they took all.

29. *quitzatzatzitia* in the *Real Palacio MS*.

And if [the youths] chased the offering priests into the *calmecac*, they also robbed them;³⁰ they removed things from them. They took away all the mats, the shell trumpets, the seats with backs.

And they just dispersed from there, each one; there was stopping toward evening when there was still a little sun.

And the fourth day [of Atemoztli] was called "Ashes are scattered." The old people said: "Indeed the bathed ones who died, it is said, still walk [on the earth] for four days. Not yet do they depart to the place of the dead. But when ashes are scattered, then they go down to the place of the dead."

And at that time were burned their paper vestments in which they had died, which had been laid in reed coffers. And at that time there was head-washing with *amolli* soap; there was bathing. Then there was departing on the part of each one; thus there was dispersing, [each to his own house].

Here ended the feast of Panquetzaliztli; already it had taken four days from [the month of] Atemoztli.

30. *quintlanamoyalia* in *ibid.*

Thirty-fifth Chapter, which telleth of the feast day and the honors which they observed during all the days of the sixteenth month, which was called Atemoztli.¹

The sixteenth feast was the one known as Atemoztli.

For this reason was it called Atemoztli: it was indeed the time that the rains newly broke out, growled, thundered. All the common folk said: "Water cometh down" or "The Tlalocs descend."

And at this time the fire priest of the Temple of Tlaloc was very solemn, was very devout; he was trusting, he was expecting that in its time the rain would break out.

And when the rain broke out, then he forthwith arose; he seized his incense ladle. Its handle was indeed very long, quite thin. The incense ladle rattled. It was in the form of a serpent. And the serpent's head also rattled; it also [had a stone in] its hollow center.

Then he quickly scooped up the burning embers, the fire; he then quickly put on *yauhtli*. Only this did he do. Then he offered incense; to the four directions he raised [the incense ladle]. Much did it rattle; [the incense] spilled out; it fell out. Then he departed. He walked everywhere; he issued everywhere into the temple courtyards; everywhere he offered incense; everywhere he spread warmth. Thus he attended to the matter; thus he called upon the Tlalocs; thus he prayed for rain.

And a number of the common folk made vows that they would make figures of the mountain [gods]. And five days [before the feast] they arranged paper, they bought paper, and liquid rubber, and obsidian knives, and maguey fiber. They bought them.

They paid great honors to [the mountain gods], and they did penances so that they might make the figures and cover them [with paper]. They did not soap themselves when they bathed themselves; only their necks did they wash. Neither did [a man] lie

Concerning the term Atemoztli, Tovar refers to frequent, extraordinary drizzles in the region, attributed to Tlaloc. Kubler and Gibson, *The Tovar Calendar*, p. 33.

with a woman, and neither did a woman lie with a man.

And [until] the feast day dawned, when the twenty days of Atemoztli were completed, thus was all night lived, thus indeed was there spending of the night as paper was cut, that the spotted paper banners might be completed, might be finished. And when they were completed, when they were finished, they were each attached to poles. On the ground they began; they reached the top [of the poles]. They set them each up in the middle of the courtyard. There indeed they spent the feast day.

And the producers of figures of the mountain [gods] first entertained the offering priests, so that they would make for them the paper adornment of the small mountain gods. But only there in the *calmecac* did they array them.

And when all [the adornment] had been finished, then they quickly took them to the homes of those who had undertaken to provide the figures. And their belongings went with them: their two-toned wooden drums, and their gourd rattles, and their turtle shells. Then they adorned the figures of the mountain gods; they offered them food; they dressed them.

And one who produced the figures [provided] perhaps five; [another] perhaps ten; [another] perhaps fifteen. And [the figures] which they adorned were all [made] purely of amaranth seed dough.

And they fashioned figures of these mountains: Popocatepetl, Iztac tepetl or Iztac ciuatl, Tlaloc, Yoaltecatl, Quauhtepetl, Cocotl, Yiauhqueme, Tepetzintli, Tepepolli, Uixachtecatl; also [the god of] fire, Chicome coatl, Chalchiuhtli icue, Ecatl.²

And when they had adorned them, then they set food before them; they did it for each one alone. And their tamales were exceedingly small, exceedingly tiny, each one long and small, each one long and tiny. And they put them into each one's small wooden vessel and their small sauce bowls; and their small earthen vessels contained a very little chocolate.

And four times during the night they made offerings of food. And before them lay two "green stone" jars; pulque was [in them]. And the "green stone" jars were made of green gourds.³ They split them; they took out their seeds; they removed the

seeds. And they removed their pith as if it were a cord. There they put in the pulque with fermentation plants added.⁴ Thus all night they sang for [the images]; they held vigil for them, and they blew trumpets for them, they played flutes for them.

And they who sounded the trumpets were not those whose office it was [to blow trumpets] but youths. They were much honored; they were given food, they were given drink.

And when this was done, when it dawned, [the priests] then sought weaving sticks. Thereupon they planted them in the hearts [of the images].⁵

And when they had set in the weaving sticks, then they bent back the necks of the amaranth seed [figures]. Then they took from them what had served as their hearts. They gave them to those who had produced the figures; [the priests] placed them in the green gourd bowl.

And when this was done, when [the priests] had slain the amaranth seed [figures], then they gathered, they heaped up all the mountain images' paper vestments. They burned in the middle of the courtyard; they burned them, they set fire to them. And their little vessels, the little wooden vessels, all burned together.

And all the reed mats on which they had stood, and the reed staves, and all the little vessels from which they had eaten, and the "green stone" jars, all [these] they left in the Mist House.

When they had gone to leave these, thereupon first arrived the bidden guests to feast in honor of the images. Then food was offered them, each severally. Nothing else was done. When they had eaten, thereupon they gave them pulque.

And the women also entered. It was said: "They leave the tamales." None came emptyhanded; everybody went bringing their dried grains of maize; the women carried them in their skirts. But those who brought their ears of corn [brought] perhaps fifteen or twenty.

And when they had assembled, when they had sat down, then they gave them food; food was given them. Then also they gave them pulque; they made them drunk. They set before them pulque

Thirty-sixth Chapter, where are related the feast day and the debt-paying which were observed during all the days of the seventeenth month, which was called Tititl.¹

The seventeenth feast was the one known as Tititl.

At the time of this feast there died a person named Ilama tecutli—[one in] her likeness, a ceremonially bathed one. The stewards displayed her.

And her adornment was that of Ilama tecutli. She had her white skirt, her white shift—completely white. And over this she was dressed in what was named her star skirt. This was made with small shells on cured skin cut into long, thin strips, the shells set in at the end of each [strip]. She wore it about her hips over [the other skirt]. When she walked, loudly did it jingle; it was audible for a distance. And her sandals had white toes, each toe woven with cotton thread.

And her shield was only a chalky shield pasted with eagle feathers. Its center was made of eagle feathers sewn to the middle of the shield, and it had pendants of heron feathers at the edges [and tassels shaped like] grasshopper heads, of eagle feathers; they hung by their points. And on the [other] side she held her weaving stick.²

And her face was painted. It was in diverse colors; it was painted in various colors. About her lips they spread black; it was said: "She is painted black [about] the lips."³ And upon her nose and her forehead they spread yellow ocher.

And her eagle feather headpiece was a headdress on which stood arrayed eagle feathers; only they were the hair. They were twisted, arrayed, disposed,

1. "Estiramiento," Garibay suggests in "Relación breve," p. 314. Orozco y Berra, in *Historia antigua*, Vol. II, p. 39, writes: "Tititl. Torquemada traduce, tiempo apretado; Boturini, vientre ó nuestro vientre. Gama rechaza como falsa la interpretación de Boturini, y saca la suya del verbo titixia, rebuscar despues de la cosecha." Torquemada, in *Segunda parte*, p. 300, amplifies his version thus: "porque lo era de frios, y heladas, las quales sentian mucho por la poca ropa de que usaban, y porque por este mismo tiempo, andaban apretados, con Guerras, y Asaltos, que tenian las unas Provincias contra las otras, y se mataban, y destruian unos à otros."

Durán (*Historia*, Vol. II, pp. 301–302) writes: "quiere decir estirar . . . imaginaban en el cielo dos niños estirándose el uno al otro. . . . había bailes de mugeres y hombres asidos unos con otros de las manos."

2. The shield and the entire costume of the goddess are clearly illustrated several times in the *Codex Borbonicus*. Paso y Troncoso, in *Descripción, historia y exposición del códice pictórico de los antiguos nauas* (Florence: 1898, p. 273), thus describes the shield: "la rodela, que se acomoda muy bien á la descripción que han dejado los indios, es blanca; tiene un corro de plumas de águila pegadas en el centro; y llena como rapacejos otras 2 clave de plumas: unas pequeñas de garzotas, redondas (que algunos han tomado por conchas, porque lo parecen: pero que no son sino plumas), é ingeridas en estas primeras, y de ellas pendientes, otras plumas grandes de águila."

3. *motentelilhuia* in the *Real Palacio MS*.

sewn to it, sewn to each other. The headdress was called *tzompilinalli*.

And before she died, she danced. The old men beat the drums for her; the singers sang for her; they intoned her song. And as she danced she could weep for herself, and she sighed; she felt anguish.⁴ For indeed it was only a short time, only so much time, only a brief time until she was to give her service when she would bring an end to earthly things.

And when the sun was past its zenith, thereupon they took her up to the top of the temple. All the impersonators of the devils went laying hold of her, went accompanying her; they went in file. Yet another impersonator of [Ilama tecutli] went leading them, one whom verily they thought a god[dess] on earth; it was only a man whom they [so] adorned.

And when they had taken her [to the summit], then they cut open her breast. And when she died, then they severed her head. And her head they gave to him who went leading. He took it with him; in his right hand he went grasping it; he went dancing; with the severed head he went making dance gestures. He went before them; he went leading all the impersonators, the representatives of the devils. They circled the temple; then they descended in the same way [as they had ascended]. They came ranged in a row; they came in line. And when they had come to descend to the ground, thereupon they each went, they dispersed; they went, each, to their homes, to their several *calpulcos*, where [the gods' raiment] was guarded.

And the impersonator, the likeness of Ilama tecutli, thus danced: he kept stepping back; he raised his legs up behind him; and he kept supporting himself upon his staff, a cane.

At its end, at its head, it was divided into three [points], like a three-pronged harpoon. It was called his thorny staff. And when he thus danced, it was said: "Ilama tecutli backeth away." And they put on him a mask; it looked in two directions. It had large lips, it had huge lips; and it had big, round, protruding eyes. And upon his head stood a row of small banners; they stood in line. They seemed like a wreath of flowers upon his head.

And when this [took place], it also was said: "Her grain bin burneth." Her grain bin was

4. Torquemada (*Segunda parte*, p. 284) writes, however, that "a esta Muger le era permitido llorar, y entristecerse mucho (caso negado en otras, que morian otros Dias) y así se entristecía, suspiraba, y lloraba, con la memoria de la muerta, que de proximo, y cerca esperaba."

fashioned⁵ of pine branches which they joined together; like a framework did they arrange it.⁶ They wrapped paper about it; they caulked it with paper. They placed it there upon the eagle vessel.

And a fire priest arrayed himself; he was bedight as a young [warrior]; he imitated a youth [with] his netting cape, his forked heron feather device, his deer hoof [rattles], his lip pendant. He departed from the summit of the temple; he came bringing a maguey leaf; a small banner came standing on it.

When he came to arrive on the ground, he thereupon went to the eagle vessel, where stood the grain bin. There he placed the maguey leaf.

And when he had placed it there, the offering priests thereupon appeared. They ran fast; it was as if each strove to be first. It was known as, it was called "They run for flowers"; they climbed up to the temple, where the flowers were. They were called godly flowers.

And when [the priests] had gone to reach the summit [of the temple], then [others] set fire to, ignited the grain bin. Once again [the priests] descended; they each quickly grasped the flowers. There they were casting the flowers there in the eagle vessel, there where the grain bin burned. Then the offering priests each ran off; they just left. This is quite enough.

And upon the morrow, then began the casting of bags at people. Everybody, each one, made bags for themselves. They carried grass nets; there they filled them with the flowers of reeds or with scraps of paper. They shredded paper; they shredded it fine; they bound it inside [of the nets]. And some carried nets [made like] gloves; they also filled them with reed flowers; they were called hand bags. And some only prepared themselves green maize leaves, which they made into bags for themselves; they pressed the leaves into balls.

And at this time it was commanded that none should put stones [in the bags]. Those who were yet small boys only began in fun when they began the mock-fighting with bags; only gradually it quickened. As the mock-fight was fought, it was as if it quickened as blows were repeatedly struck perchance at the heads [of the participants], perhaps at their backs, perhaps at their breasts as they dealt blows.

5. *chichiua* may be rendered in two ways. We have been guided largely by the context.

6. In the next chapter (Izcalli) Sahagún notes that "*bazian la estatua del dios, de fuego de arquitos, y palos atados, unos con otros, que ellos llaman colotli, que qujere dezir zimbria, o modelo.*"

And the boys cast bags at the maidens — those yet with the long hairdress; whenever these came before them, there they cast bags at them; they surrounded them; in truth some made them weep. But when some woman took forethought if she went forth somewhere, she took something with her as a staff, or else a "devil-fruit-thorn." If anyone came to cast a bag at her, she pursued him with it, she defended herself with it.

But if one carried nothing with her as her defense, they indeed formed a ring about her. And some of the boys only kept watch; so that some might not display their bags, they just went hiding them by their sides.

And when they came upon a woman, if they somewhat waylaid her, then they turned around; they struck her; they made it known to her only when they struck her with the bags, when they cast the bags at her. They said to her: "It is a little bag, O our mother!" Then they ran away.

And this was done when there was the casting of the bags. And all these days the women watched themselves well; they were very prudent when they walked abroad, when they followed the road.

Enough. Here ended Tititl.

Thirty-seventh Chapter, which telleth of the feasts and the honors performed during all the days of the eighteenth month, which was called, which was known as Izcalli.¹

The eighteenth feast was the one known as Izcalli.²

Upon the tenth day of Izcalli, tamales stuffed with greens were eaten. It was maintained, it was said: "Our father, the fire, roasteth [food] for himself." They set up his image; it was only a framework [of wood] which they made.³ They gave it a mask. His mask was made of green stone horizontally striped with turquoise. It was very awesome; much did it gleam; it was as if it shone; it cast much brilliance.

And they fitted upon its head a quetzal feather crown, quite narrow at the bottom, large enough to fit around the head. The quetzal feathers were outspread. And there were two head-fire-drills; they became as his horns; they were on two sides. And the head-fire-drills both had quetzal feather vases. And to the base of the quetzal feather crown was sewn yellow hair. Very even was the head trimming; very evenly was the hair cut. His lordly hair fell to his loins. Very evenly was his head trimmed, his hair cut.

And when they put it on him, it was verily like his [own] hair.

And they dressed him in a cape of quetzal feathers, replete with quetzal feathers. Very far did it lie dragging; it was dragging a great deal on the ground. The wind penetrated it; it was as if it kept raising it up; it was as if it glittered, it was as if it gleamed.

And his mat was an ocelot skin; the ocelot skin mat lay with paws extended; in the same way its head lay face down. And this [image of] Xiuh-tecutli was before a brazier. At midnight [the priest] used the fire drill [to make a fire]. And when a

1. In the *Real Palacio MS*, fols. 123, 124, and 125 were bound out of correct sequence in the MS (pp. 45–50 in the Paso y Troncoso edition). Seler (*Einige Kapitel*, pp. 230–48) arranges the text in accordance with the consecutive numbering of the folios (119–26).

2. "Growth," or "the growing," according to Garibay ("Relación breve," p. 316). Torquemada favors the meaning "rebirth" (*Segunda parte*, p. 300): "quiere decir: Resucitado, o el de la resurrección: porque por aquel tiempo iã queria mudar el tiempo, y pasar de frío a calor, y començar la Primavera." In Clavijero's *Historia antigua*, Vol. III, p. 172, n. 54, it is suggested that the literal meaning of *izcalli* is "here is the house."

3. Sahagún's corresponding Spanish text says: "hazian la estatua del dios, del fuego de arçijos, y palos atados, vnos con otros, que ellos llaman colotli, que quiere dezir zimbria, o modelo."

flame fell, thereupon he blew upon it; then he made the fire.

And when the fire had been made, when it was dawn, when it grew bright on the land, then there ranged themselves, there came first the youths, the small boys; they were giving the old men the snakes which they had caught. The old men were spread about taking them from [the boys]; they were spread about casting them into the fire. And everything, whatever anyone had captured—all the birds, the reed thrushes,⁴ boat-tailed grackles,⁵ western grebes,⁶ all the various birds, and salamanders,⁷ large lizards,⁸ long-tailed lizards,⁹ thick dark fish,¹⁰ thick white fish,¹¹ small white fish,¹² shrimps,¹³ frogs,¹⁴ dragonfly larvae¹⁵—all of them they were spread about casting into the fire.

Then [the boys] were spread about coming forth; [the priests] were spread about offering each one a tamal stuffed with greens. And everyone of the common folk made themselves tamales stuffed with greens. They laid them before [the image of] Xiuh-tecutli. As many as laid them out before Xiuh-tecutli did so purely voluntarily. But some laid them as offerings only in their *calpulcos*.

And the tamales stuffed with greens they also named precious green stone tamales. And all the common folk gave one another their tamales stuffed with greens; they were given one another. Whoever first cooked her tamales stuffed with greens then went to offer them to her kin. Thus she showed her self-esteem.

And the sauce of the tamales stuffed with greens was a shrimp sauce. And the sauce was called "red [chili] sauce." And when the good common folk ate, they sat about sweating, they sat about burning themselves. And the tamales stuffed with greens were indeed hot, gleaming hot. They ate them hot; they sat about steaming their noses. And the husks

they only set apart. No one took them to the fire; they strewed them all in the water.

And when this was done, when there had been eating, thereupon pulque was drunk. It was said: "There is cooling off at the oven; the old men cool off at the oven there at the Temple of Xiuhtecutli." And thus did they cool off at the oven: they sat about drinking pulque, they sat about singing until it was dark. Here ended, thus concluded [the time when] tamales stuffed with greens were eaten, or the eating of tamales stuffed with greens.

And when Izcalli arrived, when twenty days were counted, at that time Milintoc roasted something for himself. He likewise was [god of] fire. They also set up his image; it also was only a framework which they made.¹⁶ They put a mask upon it made of [a mosaic of bits of] seashell. The lower part of the face was blackened, made black [with] black stones called *teotetl* [jet], and the face was striped horizontally with black mirror stones.

And upon his head they fitted a ball of yellow parrot feathers. His tuft of hair at the back of his head was made of turquoise-browed motmot feathers: they were his motmot-tuft of hair at the back of his head. And they set on him his fire-flowers, made of turkey hen neck feathers.¹⁷ It was as if this flared up, and [it had] plucked [single] flaming red feathers; and they were set in order.¹⁸ When they put it on, it was as if in truth it lay burning. And his vestments were made only of flaming red feathers — a flaming red feather cape which also trailed far.

And they laid before him tortillas made of uncooked ground maize,¹⁹ or bracelet tortillas. They ground the maize, and when it was already cornmeal, then they moistened it with hot water; then it was sweetened. Then they offered the tortillas. Some were with shelled beans — cooked shelled beans, not raw shelled beans.

And when they had set Milintoc in place, then offerings were laid before him. The common folk, each one, [made offerings]; they went together each [with] five [tortillas]. A great quantity of bracelet tortillas were heaped up before him.

And in the same way [as for Xiuhtecutli] the youths [and] small boys were ranged in order; they

hung on sticks the serpents and all the small animals mentioned. They spread about offering them to the old men, and the old men spread about casting them into the fire. And the quite small serpents and the other quite small animals indeed burned; they charred. But the well-grown serpents, when they had been roasted, they went taking out. They spread about casting them on the hearth. There they were placed in a pile. Later the old men of the *calpulli* ate them.

And the youths [and] small boys then were spread about coming forth; [the old men] would offer them the bracelet tortillas. Then they each went. And when this was done, the bracelet tortillas were eaten.

Thereupon there was cooling off at the oven; the old men cooled off at the oven there at the Temple, the *calpulco*, of Milintoc. And the pulque makers, the lords' pulque makers, left with each [of the old men] a bowl of pulque, or a gourd, with each one, or a small earthenware jar with each one; quite freely, quite of their own accord, they left the pulque; they would pour it into a large earthenware vessel. And the old men sat drinking the pulque; they sat cooling off at the oven. They did not become drunk.

Enough of this.

And when the twenty [days] of Izcalli had passed, thereupon were established the five days of Nemontemi or Nenontemi.²⁰ They belonged nowhere. And the Nemontemi were indeed feared; they were held in awe. No one disputed with others, no one wrangled. And if anyone disputed with others, then it was said that they would continue it. And he who was born then they named Nemo. They said: "It is said that nothing is his desert, nothing becomes his merit. He will live in misery, he will live in poverty there on earth."²¹

And when it was the time of Izcalli, in the first year, and in the second year, and in the third year, nothing was done. But later, in the fourth year, a great [festival] was observed. Then died those [adorned as] *Ixcoauhqui*, the impersonators of *Xiuhtecuitli*, ceremonially bathed ones. Sometimes many died; sometimes not many.

And upon the morrow, when already [the feast of] Izcalli had dawned, the ceremonially bathed

20. Corresponding Spanish text: "*estos cinco dias, a njgun dias, estan dedicados: y por esso, los llaman nemontemj.*" *Nenontemi* means "not filled" and refers to an incomplete ritual month of 20 days.

21. Cf. Dibble and Anderson, *Book VI*, p. 225.

ones entered the sand; they brought them to the sand there at Tzonmolco. The women carried everything, all their womanly array, and the men carried everything, all their array (as hath been told elsewhere). And they carried for them all their paper array; these various things went upon a wooden globe.

And when they had brought [the bathed ones] there, thereupon they arrayed them; they were arrayed. They put on them all their paper array. And when they were prepared and arrayed even as Ixcoçauhqui was arrayed, and the women were arrayed in the same manner, thereupon they climbed up to [the Temple of] Tzonmolco; they went in rows. And when they reached the top, thereupon they circled about the offering stone. Then once again they came down. They also came in rows.

And when they came descending, thereupon they took them to the *calpulco*. Then they took apart the various [vestments]; there [the victims] were gathered in a house; they guarded each of them well. They fastened the men with a rope about the waist; [guards] held them tightly [with it] when they [went forth to] urinate. And when midnight arrived, then there was the cutting of hair; they cut hair from [the crowns of] their heads as hath been told, as hath been published. And when hair had been cut from them, thereupon they had feathers pasted [on their heads]. They also pasted feathers on [the heads of] the women. And, as during the night, none of the stewards might sleep by day.²²

And when day broke, when already it grew bright on the land, thereupon was burned [the bathed ones'] various [raiment] (as hath been told). When each of these had been burned, thereupon once again they entered indoors. But some did not burn their various belongings; they only gave them as gifts to others; they gave them to others.

And when it had dawned, then once again they were adorned. Thereupon they went there where they were to die; they were in order. When they reached there where they were to die, thereupon they danced, they sang; they made an effort. It was said that [they sang until] their voices cracked; it was said that they were hoarse.

And when the sun had already passed its zenith, thereupon descended [he who was arrayed as] Paynal; he led the captives here; he came at their head.

22. "En aquella noche nadie dormía" seems to be the corresponding Spanish text of the *Florentine Codex*. See, however, Angel María Garibay K., "Paralipómenos de Sahagún," *Tlalocan*, Vol. II, No. 2 (1946), p. 171, for a discussion of *tlaca* in composition.

They became the fundament of [the bathed ones]. When the captives died, then [they slew] the bathed ones, [the impersonators of] Ixcōauhqui.

And when they had completely ended the slaying, when it was so, [then] all the rulers, the lords, those much to be revered, then already were spread about; they just stood about waiting. They were arrayed. Moctezuma led them. He had put on the turquoise ruler's miter, the [symbol of] rulership.

And all put in place the turquoise nose rods and inserted the turquoise ear plugs, indeed of turquoise; but some were only made of wood painted like turquoise. And they put on the sleeveless jackets, the turquoise [blue] jackets, well ornamented, and the Xolotl jewel like a little dog which went with it. These were made of paper painted turquoise [blue]. And they had their paper breechclouts painted with stripes. And these were painted only with black.

And in their hands wooden staves went lying; they were small, shaped like weaving sticks, painted in two colors—red above and chalky below. On either side they grasped a paper incense bag. Thereupon they came down [from the temple]; they came dancing.

And when they had come descending, then they went encircling [the courtyard]. Only four times did they go encircling. And when they had danced, then there was dispersing on the part of each one; there was dispersing of each person. Thereupon there was entering the palace; there was going into the palace. And of this it was said: "There is lordly dancing; the lords dance the lordly dance." It was the privilege only of the rulers that they should dance the lordly dance. This was done every four years.

So it was.

It was still early morning when was begun the piercing of the ear [lobes], when they pierced the ear [lobes] of the small children. And they pasted them with yellow parrot feathers and with soft [white] feathers which went mingled with the yellow ones.

And for a gift they made pinole.²³ And the mothers sought out some brave warrior, perhaps a seasoned warrior or a leader of youths who might wish to be as a parent, thus to become [their children's] uncle. Also some sought out a woman who might be as an aunt.

23. The *Real Palacio* MS here contains the line *yeuatl yn chinampinolli*, which probably identifies the *pinolli* as ground dried maize and chia seeds.

They gave gifts to the man; they gave him perchance a tawny cape or a coyote fur cape. And also the woman was given gifts; they also gave gifts to her.

And when there had been the piercing of ear [lobes], thereupon they took each of the children to singe them. They laid a fire, they made a fire; indeed much incense did they spread on the fire.

And hence was it said: "They are singed." The old men of the *calpulli* were spread about taking the small children; they were spread about dedicating them over the fire. Then they were spread about giving them uncles and aunts. And it was as if the children kept crying out, it was as if they whimpered. Then they went each to his home.

And when they had gone to their homes, thereupon there was eating, there was drinking on the part of each one.

And when the singing and dancing were begun in the temple, it was noon. Then once again there was going to the temple. The uncles [and] the aunts carried the children. Those who carried things went with the pulque; what was poured they carried in small gourds, some in earthen jars. And when they went to arrive, there was singing there. Then was quieted the dance; they carried the children on their backs. There they were spread about giving them pulque; they went giving it to them; they gave it to one another.

And for drinking, for drinking the pulque, there were quite small drinking vessels; only exceedingly small ones. And all were giving pulque to the small children.

Hence this was named "pulque drinking for children."

And in the evening, when there had been ceasing on the part of each, there was going on the part of each to their several homes. And when there had been going on the part of each to their several homes, once again they danced in their courtyards. All the kin [of those who celebrated], each one, drank pulque—the revered old men, the revered old women.

Here ended Izcalli.

And for this reason was [the feast] named Izcalli [The Growing]: at this time they lifted by the neck all the small children. It was said that thus they

Enough. Here ended, here concluded the feast of Izcalli.

Ie ixqujch njcan tzonqujça, njcan tlamj in jlhuajt
Jzcalli.

Thirty-eighth Chapter, which telleth of the feast which was named Uauhquiltamalqualiztli [The Eating of Tamales Stuffed With Amaranth Greens], which was celebrated at the time it was the tenth [day] of the aforesaid month; and when it was [this time], they celebrated a feast for him who was their god, whose name was Ixcoçauhqui.

Izcalli and Izcalli tlami: these verily are placed in the month of January, after there have been eight days, already after eight days, after the eighth day. When it was this [time], tamales stuffed with amaranth greens were eaten.¹ Everywhere [the custom] was general; it was everywhere; nowhere was it left out. In each house, and in each city, they indeed consumed two [tamales] when there was the making of tamales stuffed with amaranth greens, when there were tamales stuffed with amaranth greens. And there was giving of them to one another, there was giving of them to one another on the part of each one. In this manner was there the giving of them: there was giving in company; there was giving among themselves; there was giving to friends; there was giving to those whom they knew. There was no giving in ill will; there was giving in gladness.

And she who first cooked her tamales stuffed with amaranth greens then went to give them to [those of] houses like hers, her neighbors, those who lived in nearby houses. And first she made offerings for her distant kin.

And when this was done, when she had given them to each of the others, then they sat down to eat their tamales stuffed with amaranth greens. They were arranged in a circle. They rounded up, gathered together, brought together, assembled their children. This formed the family.

And first they made an offering to the fire; they laid five tamales stuffed with amaranth greens before the fire. These were in a wooden vessel; they went covered up. Then they set them in place, they laid them as offerings for each of their dead, there where they each lay buried.

1. *Uauhquiltamalqualiztli*: cf. Arthur J. O. Anderson and Charles E. Dibble: *Florentine Codex, Book I, The Gods* (Santa Fe: School of American Research and University of Utah, 2nd ed. rev., 1970), p. 29, n. 84. Much of the material in this chapter is discussed also in the previous one (Izcalli).

Thereupon they ate. They sat burning themselves, each one; they each sat sweating; indeed they were gleaming with the heat. What they ate went smoking; what they gladly ate they each gulped down, they went gulping it down; they ate panting; they sat burning their mouths.

And the [corn] husks of the tamales stuffed with amaranth greens [in which they were wrapped] they just laid apart, elsewhere. They strewed them in the water. And no one could taste the husks. Because of this they took care that none be scorched, burned, fall in the fire.

And they were eaten in no more than one day. By night they were each done; all were finished. They left nothing for the next day.

And when it grew dark, the old men [and] the old women drank pulque; only they. It was said: "They cool off at the oven."

And when this [was done], they set up the image of the fire [god] Ixcoauhqui, Xiuhtecuitli, Tlalxictentica, Cueçaltzin, Nauhyoueu. They gave it human form, they gave it a body of amaranth seed [dough]. They who did it, whose office it was, were the men of the *calpulli* temple known as Tzonmolco,² especially those who worshipped [fire] as a god.³

And when twenty days had passed, it was said to be Izcalli tلامي. The bather of slaves at this time displayed to the people, made known to the people, set up before the people the one who would be his bathed one, the slave whom he had bought, who would become the impersonator of Ixcoauhqui. At this time he adorned him; he placed on him all of Ixcoauhqui's array. Hence it was said, "The bather gathereth [his wealth]."

And for this reason he was called the bather of a slave: he continually bathed [the slave] with warm water all the time he was going to die, all the time that [the bathed one] went knowing that there was his tribute of death at its appointed time when he would die at the time of Tlacaxipeualiztli.

And before he died, much did the bather of slaves esteem him; he paid much attention to him. He

2. Tzonmolco: temple of the fire god; also one of the districts of Tenochtitlan. The temple is enumerated in the appendix on the buildings of the temple square as the sixty-fourth building. Cf. Sahagún, Garibay ed., Vol. I, p. 240.

3. The preceding Nahuatl text is not in the *Real Palacio* MS. The Nahuatl text for the remainder of this chapter appears on fols. 123, 124, 125 of the *Real Palacio* MS. These three folios have been removed from their correct sequence and placed at the beginning of Book II. The Nahuatl text is the same in the *Florentine* and *Real Palacio* manuscripts. However, the sequence of folios in the *Real Palacio* MS is fol. 125, fol. 123, fol. 124. This sequence is evidently correct as the notation, at the bottom of the folios, labels them C.ii; C.iii; C.iiii.

regaled him; he gave him things; all good was the food which he gave him.

And a pleasure girl became his guardian. She constantly amused him; she caressed him; she joked with him; she made him laugh; she gratified him; she took pleasure on his neck; she embraced him. She deloused him, she combed his hair, she smoothed his hair. She banished his sorrows. And when already it was the bathed one's time to die, the pleasure girl took all. She rolled up, she bundled up all the bathed one's belongings, each of what [the bather] had clothed him in, had placed on him when he had sent him as a messenger; [the things] with which he had lived in pretense, had gone with head high, had lived at ease, had gone about drunk, had indeed lived in pride.

And for this reason was [the time] named Izcalli tlami [The Growing is Achieved]: they took by the neck, they hung high all the small children. Thus was it said: "They take them for growth; they grasp them to grow, so that they will each quickly grow tall; they will develop; they will grow up."

And as for the maguëys, they divided their cores, they split their cores, they broke up their cores, they exposed their cores. And as for the cacti, they cleaned them, they pruned their branches, because thus they would develop quickly; they would revive, they would grow.

And at this time of Izcalli, then it also came to pass, every fourth year, that there was the bringing out of the children, that there was pulque drinking by the children. And then the rulers danced the lordly dance along with their noblemen. And they put on their wigs of long locks of hair; they were head pieces made of long hair; they covered them with many green stones. [The hair] fell, verily, to the rulers' waists.

And for this reason was it said that there was bringing out of the children: the children's fathers [and] mothers first sought out a woman [and] a man whom they summoned to bring [the children] to the *calmecac* at a place called Tezcacoac. It was said that they would be their uncle [and] their aunt; they became uncle [and] aunt.

And not their kin did they take; only their friends. To those whom they took, those whom they chose, they gave gifts. They laid out capes, breechclouts for us men; in the same way for a woman they laid out her skirt, her shift.

At midnight they took [the children] to the *calmecac*. There they perforated [the lobes of] their ears; they pierced [the lobes of] their ears. [The children] yelled [as] the pointed bone thus pierced [the lobes of] their ears. They there drew through a thread of unspun cotton; they bound it to them there. It was as if the small children raised a yell, kept crying out, raised a cry of weeping. And they pasted their heads with yellow parrot feathers, with soft downy feathers.

And the women who became aunts were pasted with red feathers, but only on their legs and their arms. And they went covering themselves with their paper flowers; they were called their lordly flowers.

When they had perforated their ear [lobes], then they took them each to their several homes. There they sat watching over them; they sat in vigil, they kept vigil, they sat awake; they sat awaiting the time dawn would break, the time that the light would arise, the time that the barn swallow would sing.

And when dawn broke, thereupon there was activity, there was eating, there was drinking on the part of each one. Thereupon the old men, the men of the *calpulli*, the singers sat in the courtyard while they sang for [the children]. Then they went carrying the small children on their backs. And [a child] who was already a little large his uncle and his aunt went holding by his hand. There they made him dance; they went making dance motions. And when there was still a little daylight, when the sun hung low, there was gathering together at Tezcacoac. There the dancing, the singing continued — the songs, in all, spreading the sound, crashing like waves.

And there began the giving, the giving of pulque to the people. Everyone took his pulque there; it was taken with one in earthen jars. There was giving there to each other; there was continual giving to one another; there was continual returning, there was continual reciprocating. There they gave pulque to all the small children — those who were already a little large and those who still lay in the cradle. They only made them taste it. Indeed everyone already mature was drunk; it was indeed evident that pulque was drunk.

There was no awe [of the pulque]. It was as if it bubbled up. It was not precious. It was as if it gleamed. It reached the ground. The pulque ran like water.

And they carried their drinking vessels called *tzitzicuiltecomatl*. They had three feet; they had corners on four sides.

It was as if there were reddening of faces, as if there were a din, as if there were panting, as if there were glazing of the eyes, going in disorder, quarreling, going from one side to the other, disturbances; it was as if there were repulsing, crowding together, trampling, elbowing. There was taking of one another by the hand, there was continual taking of one; there was continual persisting, there was continual pride. There was going with arm about the neck as there was entering of their several homes on the part of each one.

Thus was it said: "Indeed it is verily the feast day of pulque; indeed there was the drinking of pulque by the children."

And thus concluded, thus ended Izcalli. Then were established, were set in the Nemontemi, five days for which there were no day-names, which no longer belonged, which were no longer counted. Greatly were they feared; greatly were they held in awe.

For they were only unfortunate; there was no purpose there; nothing came forth; there was misfortune. For indeed there was no desert there, no merit; there was only misery there, poverty, purposelessness, misfortune, a life of woe.

And if one were then born, there was great fear of it, there was ignoring of it. And if it were a man, they named him Nemon, Nentlacatl, Nenquizqui. Nowhere was he counted, nowhere did he belong. He was a profitless man. And if it were a woman, she was a profitless woman.

And when it was this time, nothing was done. The palaces, the courts of justice were empty; no suits were judged. There was only staying indoors. No one swept with a broom; they only fanned [the dust] with a fan or the flight feather of a turkey hen, the primary feather of a turkey hen; or they repeatedly beat, they swept with a cape.

And none could then wrangle; there were strong deterrents to the people; there were very strict commands given one; there were stringent commands given one; people were charged not to wrangle. Nor did anyone sleep during the day. Then it was said to them: "Thou wilt do [so] always."

Nor should anyone fall stumbling, or trip, or stumble. Carefully was there walking. And to one

who stumbled they said: "Thou hast been affected by the Nemontemi; thou hast gotten it all. Be careful."

And if at this time anyone took sick, was ill, everyone said: "He hath taken sick. Nevermore will he go forth; no more may he hope that perhaps he will recover." No longer was there doubt; no longer was there hope of it.

And if anyone yet escaped [death], no longer was it of someone's notice, no longer was it of someone's conversation. It was said: "Indeed he through whom there is life was compassionate; he only acted of his own accord; he did it on his own account."

No longer was it customary that indeed there should be courage, that there should be an effort made. His kin forgot him; indeed they laid him on the ground. No longer was there leaving such a place. Somehow he got up, caught his breath. For the time when the days of Nemontemi began terrified one.

Indeed nothing was his day sign; indeed nothing was his name. Therefore no one could then practice medicine, heal one, read [the day signs] for one. For in truth [the days] were not counted; nothing was their number in all of these four [sic] days.

TEMPLE OF UITZILOPOCHTLI

COATEPETL. 1.

Uitzilopochtli's feast came three times a year, when they used to celebrate his feast day.

The first time was [in the month] named Panquetzaliztli. And this was when there ascended [to the top of the pyramid], together, this Uitzilopochtli [and another] named Tlacauepan Cuexcotzin.¹ And when they took the image of this Uitzilopochtli up, indeed all the offering priests, the youths carried it in their arms. And the image of Uitzilopochtli was [made] only of amaranth seed [dough]. It was very large; it was as tall as a man.

And the name of the second one was Tlacauepan Cuexcotzin. His image also was [made] only of amaranth seed [dough].

And when the image of Uitzilopochtli was made, when it took human form, it was there at a place called Itepeyoc. And the second one, Tlacauepan Cuexcotzin, was made, took human form, there at a place called Uitznauac *calpulco*. And during one night they gave them form, they gave them human form.

And when it dawned, they were already shapen. Thereupon offerings were laid before them. And when it was already afternoon, thereupon there was dancing, there was going round [in procession]. And when the sun had entered his house [at sunset], they took [the figures] up [to the top of the pyramid]. And after they had gone to set them in place, thereupon they descended. [The images] were there all night. And the offering priests who guarded them were called Yiopoch.

And when it dawned, thereupon Paynaltzin came forth, who was himself the representative of Uitzilopochtli. [A priest] carried him in his arms. And the image of Paynal was only of wood [formed] to go as a man. And he who bore it in his arms was titled Topiltzin Quetzalcoatl; he was richly bedight with his feather device from shoulder to flank. And the image of Paynal was thus adorned: it had its hummingbird disguise, its *anecuyotl* device, its

golden banner, its green stone necklace. And over the small of its back went hanging the mirror device for the back, all fine turquoise. And he who led [the god] went carrying his serpent staff covered with turquoise.

And when [the priest with] Paynal came to Teotlachco, then there was the slaying [of sacrificial victims] before him. Those who died were [both] named Amapantzin; both were only impersonators. And many more captives [also] died.

And when there had been the slaying, thereupon Paynal was taken in procession. He arrived in Tlatelolco, and when he had arrived, thereupon the common folk met him; they offered him incense and beheaded many quail for him. And thereupon they started, they reached Popotlan; similarly the common folk met him; they offered him incense and beheaded many quail. And then again they started, they reached Chapultepec; similarly the common folk met them; they offered [the god] incense and beheaded many quail for him. Thereupon they started, they reached Tepetocan; the common folk also met them, offered him incense, and also beheaded many quail. Thereupon they started forth, they reached here at Acachinanco; the common folk also met them; they offered him incense; they also beheaded many quail.

Thereupon the insignia started forth. And when the insignia came to arrive, thereupon they mounted to the top of Coatepetl, where was [the image of] Uitzilopochtli. And when they had gone up, thereupon they laid out the blood banner. When there had been circling about, thereupon they descended.

HERE IS DESCRIBED THE FEAST WHICH WAS
OBSERVED EVERY EIGHT YEARS

And this was Atamalqualiztli [The Eating of Water Tamales], which went being observed every eight years. Sometimes it was observed in [the month of] Quecholli, but perhaps sometimes it was observed in [the month of] Tepeilhuitl.

For seven days there was fasting. Only water tamales, soaked in water, were eaten, with no chili, with no salt, nor with saltpeter, nor with lime. And they were eaten [only] at noon.

And he who fasted not at this time, if he were noted, was then punished. And much was this, the eating of water tamales, held in awe. And he who did not this, if he were not seen nor noted, it was said, would be visited with skin sores.

And when the feast arrived, it was said: "Good fortune is sought," and "Gastropod shells are applied."¹ And at this time indeed all the gods danced; hence it was said: "There is godly dancing."

And all came forth there as hummingbirds, butterflies, honey bees, flies, birds, black beetles, dung beetles; in the guise of these the people appeared when they danced.

And still others appeared in the guise of sleep. [Some had] fruit tamales as their necklaces; [others had] turkey hen tamales as their necklaces. And before them was the maize bin filled with fruit tamales.

And also all of [these] came forth: those who appeared in the guise of the poor, of those who sold various kinds of vegetables, of those who sold pieces of wood.² And also appeared there one in the guise of one afflicted by the divine sickness. And still others imitated birds, owls, barn owls;³ and they appeared in the guise of still other birds.

And [an image of] Tlaloc was set in place. Before it was [a pool of] water. It was full of serpents there, and of frogs. And those called Maçateca there

swallowed the serpents. They were still quite alive, each one, [as well as the frogs]. The Maçateca [just]⁴ took these with their mouths, not with their hands. They just fastened their teeth in them as they took hold of them in the water there before the image of Tlaloc. And the Maçateca just went eating the serpents as they danced before it.

And he who first finished a serpent, who swallowed it, then shouted — yelled; he circled the temple. And they gave gifts to those who swallowed serpents. And there was dancing for two days.⁵ Toward evening [of the second day] there was a procession; four times was the temple circled.

And when fruit tamales were eaten, the maize bin was filled [with fruit tamales]. Everyone took [some] when the feast ended.

And the old women and the old men wept exceedingly; they bethought themselves that perhaps they would not attain [another] eight years.

They said: "Before whom [among us] will [this again] be observed?"

[And as to its being done thus, they said that]⁶ thus the maize went being rested every eight years. For it was said that we brought much torment to it — that we ate [it], we put chili on it, we salted it, we added saltpeter to it, we added lime. As we tired it to death, so we revived it. Thus, it was said, the maize was given [new] youth when this was done.

And when the feast was ended on the morrow, it was said: "[Tortillas] are dipped in the sauce"; because indeed there had been fasting for the maize.

BEHOLD HERE A TRUE [RELATION] OF ALL THE
[BUILDINGS] WHICH WERE THE MEXICANS'
TEMPLES

All which was [in] the courtyard of [the Temple of] Uitzilopochtli was like this:

As it appeared, it was perhaps two hundred fathoms [square]. And there in the center of [the square] were very large temples; they were the temples of the devils. The one which was taller, which was higher, was the house of Uitzilopochtli or Tlacauapan Cuexcotzin. This one was very large, very tall.

And this one was in the middle [of the square]. And with it was the house of Tlaloc. They were indeed together; they were indeed joined to each other. And at the very top, [one] stood a little higher perhaps by a fathom.

Of both of these, [one] was the taller, the higher. Only they were quite similar. And at the top of each was a temple; at the top was a house.

There was the image of Uitzilopochtli, also named Ilhuicatl xoxouhqui. And in the other [temple], there was the image of Tlaloc.

And also at the top [of the pyramid] were circular stones, very large, called *techcatl* [sacrificial stones], upon which they slew victims in order to pay honor to their gods. And the blood, the blood of those who died, indeed reached the base; so did it flow off. All were like this in each of the temples which were of the devils.

And this Temple of Uitzilopochtli and Tlaloc faced there toward the setting of the sun. And its stairway was very wide; it was reaching there to the top. There was ascending there. And of all the temples that there were, all were like this. Very straight were their stairways.

TLALOCAN, THE TEMPLE OF EPCOATL

At Tlalocan there was fasting in honor of the Tlalocs when their feast day came. And when there was fasting, thereupon evil was done, bad things were done. There was dancing with dried maize stalks. And they danced in all the houses; it was

In tlalocan: vncan netlalocaçaualoia, in jquac ilhujuhqujçaia: auh in onneçauoloc, njman ie ic aiectilo, ioan neaviltilo, netotilo, yca cintopilli: auh novian in calpan mjtotiaia: mjtotaia, etzalmaceoaloia. Auh in jquac oonqujz imjlhujuh, in tlatlaloque,

said that the dance of maize and beans was danced. And when the feast day of the Tlalocs ended, thereupon died those who were destined there, those called Tlalocs. And this went being done yearly.

MACUILCALLI AND MACUILQUIAUITL

There in that place there died the informers, those who imparted secret information to those who were not dwellers here — the Tlaxcalteca, or the Uexotzinca, or the Cholulteca who entered here in Mexico during war time; who took forth information.

And if they could escape, if they came to take the information, these Tlaxcalteca, or Uexotzinca, or Cholulteca, and all who entered here in war time then would emplace [themselves] to await the Mexicans. And when the Mexicans went there, very many died there.

But if they were seen here in Mexico, then [the Mexicans] seized them and they slew them; they cut them to pieces there at Macuilcalli or Macuilquiauitl.

TECCIZCALLI

Teccizcalli: there Moctezuma did penances; there he offered incense. And there the debt was paid [to the gods]. And he only fasted there when the great feasts came. And there was dying there; captives died there.

POYAUHTLAN

Poyauhtlan: there fasted Mexico's fire priest and the fire priest of [the Temple of] Tlaloc, once yearly, at [the feast of] Etzalqualiztli. Both offered incense there at Poyauhtlan. And there was dying there; captives died there.

MIXCOAPAN SKULL RACK

Mixcoapan Skull Rack: there they strung up the severed heads of those who died in the Temple of Mixcoatl.

TLALXICCO

Tlalxicco: there died he who was named [and impersonated] Mictlan tecutli. Once a year he died

njman ie ic miquj in vncan pouhque in mjtoaia tlatlaloque. Auh injn cexiuhtica in muchiuhtivia ipan

TLALXICCO.

In tlalxicco: vncan mjquja, in jtoca catca Mjctlan tecutli: cexiuhtica in mjquja, ipan in tititl qujçaia.

when the feast of Tititl came. And when the impersonator of Mictlan tecutli died, then the fire priest of Tlillan offered incense there; he deposited incense. And this was done only at night, not by day.

UEY QUAUHXICALCO

Uey Quauhxicalco was Moctezuma's place of doing penance. When he fasted there, it was said: "There is fasting for the sun." And every two hundred and sixty days¹ it so came to pass that there was fasting for the sun. And also they who were called Chachanme died there — only four of them. And the impersonator of the sun [god] and of the moon [goddess] died there. And likewise many captives died there. But this was after the others.

TOCHINCO

Tochinco: there died the impersonator of [Ome tochtli], once yearly, at the time of [the feast of] Tepeilhuitl.

TEOTLALPAN

Teotlalpan: there was a procession there each year when the feast of Quecholli arrived. And when there was a procession, thereupon they departed for Çacatepec. And when it was reached, thereupon there was hunting [of game]. And Moctezuma then paid the debt there. And when he had paid the debt, thereupon he departed. No longer was anyone left there. Likewise when there was going, no longer did anyone go to be left here in Mexico. And no longer did anyone follow the road. Verily, many men went there to Çacatepec.

TLILAPAN

Tlilapan: there the fire priests bathed themselves, only at night, and often. And when they had bathed, thereupon they deposited incense; they offered incense there at the Temple of Mixcoatl. And when they had offered incense, thereupon they went to the *calmecac*.

Auh in ommjc in jxiptla mjctlan tecutli: njman vncan vallenamacaia, valletemaia, in tlillan tlenamacac. Auh injn muchioaia: çan ioan, amo cemjlhujtl.

VEY QUAUHXICALCO.

In quauhxicalco, itlamaceoaian catca in Moteczuma: iquac in vncan moçauaia, mjtoaia: netonatiuhçaualoa: auh mamatlacpovaltica vmeitica in juh muchiuiaia, in netonatiuhçaualoia. Çan no yvi injc vilooaia, aioc noiac njcan mocauhtivia in mexico: yoan oiocac vtli qujtocaia: vel muchi tlacatl vmpa via in çacatepec.

TLILAPAN.

In tlilapan: vncan maltiaia in tlenamacaque, çan ioaaltica: ioan muchipa. Auh in jquac ommaltique: njman ie ic tletema, tlenamaca, in vmpa mjxcoapan teupan: auh in ontlenamacaque, njman ie ic huj in calmecac.

1. *mamatlacpovaltica vmeitica*: although the corresponding Spanish text (cf. Sahagún, Garibay ed., Vol. I, p. 233) translates the term as "*cada doscientos y tres días*," it should be read *mamatlacpovaltica omeipovaltica*, "every two hundred and sixty days."

TLILLAN CALMECAC

Tlillan Calmecac: there dwelt the guardians of Ciuacoatl.

MEXICO CALMECAC

Mexico Calmecac: there dwelt the penitents who offered incense at the summit of the [pyramid] Temple of Tlaloc. [This they did] quite daily.

COACALCO

Coacalco: there dwelt the gods of [foreign] cities. Wherever the Mexicans conquered, they took [the gods] captive. Then they carried them here; they put them in there. And there they were guarded at Coacalco.

QUAUHXICALCO

Quauhxicalco: there the one named Yiopoch deposited incense. And there the [impersonator of the] devil called Titlacauan blew his flute. And when he had sounded his flute, thereupon he deposited incense. And when he had deposited incense, then he went in [to his dwelling]. Quite daily he did thus, perchance by night or [perchance] by day.

A SEPARATE QUAUHXICALCO

Quauhxicalco: there danced the impersonator [who was arrayed as a] squirrel. And there was erected that which was called the *xocotl*. It was only a tree. And they distributed its shoulder sash of paper, its paper banners. And this was done at the time of [the feast of] Teotl eco, also yearly.

TECCALCO

Teccalco: there was casting [of men] into the fire there; they cast captives into the fire there. This also was done at the time of Teotl eco, also yearly. And when there had been the casting into the fire, thereupon the offering priests came down here. Thereupon [the ceremony called] *amatlauitzoa* was performed.

TLILLAN CALMECAC.

TECCALCO.

In teccalco, vncan netlepantlaxoia: vncan qujntlepanlçaia in mamaltin: çan no ipan in teutl eco muchioaia, no cexiuhtica. Auh yn onnetlepantlaxoc: njman ye ic oaltemo in tlamacazque, njman ye ic amatlavitzoa.

THE SKULL RACK

The Skull Rack: there they strung up the severed heads of captives whom they had cast into the fire, who had died there at the Teccalco. Likewise this was done yearly.

THE TEMPLE OF UITZNAUAC

The Temple of Uitznauac: there died those named the Centzonuitznaua, and many captives died there. And upon [the feast of] Panquetzaliztli was this done, and [it was done] yearly.

TEZCACALCO

Tezcalco: there was slaying there; captives died there, after the others [and] not every year.

TLACOHCHALCO ACATL YIACAPAN

Tlacoachcalco Acatl Yiapan: there were guarded the spears, the arrows. Also there was slaying there; captives died there. And only at night was there slaying. And it was only at a time which was determined.

TECCIZCALCO

Teccizcalco: there also there was slaying; there captives died, also by night, also after the others, only when it was [so] determined.

UITZTEPEUALCO

Uitztepeualco: there the offering priests, at the time of their penances, scattered the thorns, or else the fir branches, when they did penance somewhere.

UITZNAUAC CALMECAC

Uitznauac Calmecac: there dwelt the penitent, the fire priest, who offered incense, who deposited incense there at the top of the [pyramid] temple which was named Uitznauac. Quite every day was it so done.

TZUMPANTLI

In tzumpantli: vncan qujcoia in mamaltin intzon-tecon, in qujntlepantlaçaia, in vmpa mjquja teccalco: çan no cexiuhtica yn muchioaia.

VITZNAOAC TEUCALLI.

TECCIZCALCO.

In teccizcalco: no vncan mjcoia, vncan mjquja in mamalti: çan no ioaltica, çan no tepan yetiuh, çan molnamjquja.

VITZTEPEOALCO

In vitztepeoalco: vncan qujtepeoia in tlamacazque in jntlamaceoia, in vitztli: anoço acxoiatl, yn jquac canjn ontlamaceoia.

VITZNAOAC CALMECAC.

In vitznaoac calmecac: vncan onoca in tlamaceuhquj, in tlenamacac: in ontlenamacaia, in ontletemaia in teucalli icpac: in jtoca catca vitznaoac: çan mu-muztlae in juh muchioaia.

A SEPARATE QUAUHXICALCO

Quauhxicalco: there they placed, there they nourished the skull rack within [the pyramid compound of the god] whose name was Omacatl. In carved wood Omacatl was in human form. And it came to pass that he was nourished [with the blood of victims] every two hundred and sixty days upon the day sign Two Reed.

THE TEMPLE OF MACUJLIPACTLI

Temple of Macuiclipactli: there was slaying there; captives died there, at night only. Also the day sign [Five Crocodile] was chosen.

TETLANMAN CALMECAC

Tetlanman Calmecac: there dwelt the fire priest, the one devoted [to the service of Chantico].

THE TEMPLE OF THE WHITE CINTEOTL

The Temple of the White Cinteotl: there captives died, only those with skin sores.² And when they died, then [the priests] buried them; they were not eaten. They died when there was fasting for the sun.

TETLANMAN

Tetlanman: there died the impersonator of Quaxotl Chantico. The rulers just determined the time that she was to die. It was after the others, and upon the day count One Flower.

THE TEMPLE OF CHICOMECATL

The Temple of Chicomecatl: only at certain times was there slaying there, and it was at night. Also it was after the others, only when it was determined, at the time that the day count One Flower set in.

OC CECN J QUAUHXICALCO.

2. *xixijoti*: "leprosus" in the corresponding Spanish text. However, cf. Charles E. Dibble and Arthur J. O. Anderson: *Florentine Codex, Book X, The People* (Santa Fe: School of American Research and University of Utah, 1961), p. 157.

TEZCAAPAN

Tezcaapan: there the penitents just bathed themselves; it was their bathing place.

TEZCAAPAN.

In tezcaapan: çan vncan maltiaia, innealtiaian catca in tlamaceuhque.

TEZCATLACHCO

Tezcatlachco: there also there was slaying; there died the impersonator of Uitznauatl — only at times, not often. Perchance it was at the time of [the day count] Two Reed.

TEZCATLACHCO.

In tezcatlachco: no vncan mjcoaia, vncan mjquja in jxiptla vitznaoatl: çan quenman, amo muchipa: aço ipan in vmacatl.

SKULL RACK

Skull Rack: there were sacrificed those named the Omacame [impersonators of Omacatl]. And also very many captives died there. And there was slaying every two hundred and sixty days.

TZOMPANTLI.

In tzompantli: vncan motonaltiaia, in jntoca catca vmacâ: auh yoan, cenca mjec in malli vncan mjquja: auh matlacpoaltica vmeitica in ommjcoaia.

TLAMATZINCO

Tlamatzinco: there died those called, those whose name was the Tlamatzinca [impersonators of Tlamatzincatl], ceremonially bathed victims, at the time of [the month] Quecholli, at its close, yearly.

TLAMATZINCO.

In tlamatzinco: vncan mjquja in mjtoaia, in jntoca catca tlamatzinca, in tlaaltiti: iquac in quechulli, itlamjan cexiuhtica.

TLAMATZINCO CALMECAC

Tlamatzinco Calmecac: there dwelt the fire priests of the Tlamatzinca, those who offered incense at the top of [the pyramid of] Tlamatzinco.

TLAMATZINCO CALMECAC.

In tlamatzinco calmecac: vncan onoca, in tlamatzinca intlenamacacahoan: in ontlenamacaia ijcpac tlamatzinco.

QUAUHXICALCO

Quauhxicalco: there the sacrificial paper descended, but only last of all did the fire serpent descend. And there the debt-payments burned at the time that, each year, the Tlamatzinca died.

QUAUHXICALCO.

In quauhxicalco: vncan oaltemoia in teteuhpoalli, auh ça oallatzacujaia in xiuhcoatl oaltemoia: ioan vncan tlatlaia in nextlaoalli, in jquac mjquja tlamatzinca cexiuhtica.

THE TEMPLE OF MIXCOATL

The Temple of Mixcoatl: there [victims] were killed like deer. And thus did they take them up when they died like deer: they only went bobbing

MIXCOATEUPAN.

In mjxcoateupan: vncan maçapolioaia: auh ynjc qujntlecaviaia in maçapolivia, çan aaquetztivia, qujnnauhcaviaia: yoan vncan mjquja in mjxcoatl y

their heads up and down; four [priests] carried them. And there died the impersonator of Mixcoatl and [the impersonator of] Cuetlaciuatl. And this was done at the time of the close of Quecholli, and [it was done] each year.

NETLATILOYAN

Netlatiloyan:³ there was laid away that which was named the likeness of Nanauatl, and Xochquaye.

TEOTLACHCO

Teotlachco: there died those named Amapantzin [impersonating the god Amapan]. They died only at dawn. And [this was done] yearly at the time of [the feast of] Panquetzaliztli.

ILHUICATITLAN

Ilhuicatitlan: there died the impersonator of the [morning] star, at night only. And very many captives died there by day. Yearly was this done, at the time that the star came forth.

THE GREAT SKULL RACK

The Great Skull Rack: there also there used to be slaying; very many captives died there, by day, not by night. [This was done] likewise at the time of [the feast of] Panquetzaliztli, also yearly.

MECATLAN

Mecatlan: there was teaching there. The sounders of trumpets were taught there—the people of Mecatlan. Quite frequently each day [they sounded trumpets].

THE TEMPLE OF CINTEOTL

The Temple of Cinteotl: there the impersonator of Chicome coatl died, at night only. And when she died, then they flayed her. And when dawn broke,

ixiptla, yoan cuetlacihoatl: auh ipan in quechulli tlamj muchioaia, yoan cexiuhlica.

NETLATILOIAN.

CINTEUPAN.

In cinteupan: vncan mjquja in jxiptla chicome coatl, cioatl, çan ioaltica: auh in jquac oommjc, njman quxipeoia: auh in otlathujc, in tlenamacac

3. The corresponding Spanish text identifies this place as the cave in which were deposited the skins of victims flayed in the feast of Tlacaxipeualiztli.

then the fire priest put on the skin of [the likeness of] Chicome coatl. Thereupon there was a procession; they circled the eagle vessel; they went dancing. And this was done yearly, at the time of [the feast of] Ochpaniztli.

THE TEMPLE OF THE CENTZONTOTOCHTIN

The Temple of the Centzontotochtin: there died [the impersonators of] Tepoztecatl and Totoltecatl and Papaztac. And when they died, it was not by night; it was by day, at the time of [the feast of] Tepeilhuitl. And [this was done] yearly.

THE TEMPLE OF CINTEOTL

The Temple of Cinteotl: there stood, there was guarded the image of Cinteotl. There the impersonator of Cinteotl died, by day.

NETOTILOYAN

Netotiloian: there danced the bathed ones [for the day sign] Nine Wind, when already they were to die. And when they died, it was at midnight, not by day. [This took place] at the time of [the feast of] Xilomanaliztli or Atl caualo, also each year.

CHILILICO

Chililico: there died the bathed ones [on the day sign] Nine Wind, at midnight. And each year did the bathed ones die there. And only the rulers ceremonially bathed them there. Likewise at the time of [the feast of] Atl caualo [was this done].

COAAPAN

Coaapan: there the fire priest of Coatlan bathed himself. Only he did so; no one else bathed himself there.

POCHTLAN

Pochtlan: there dwelt the fire priests, those who

njman conmaqujaia, in eoaio chicome coatl: njman ye ic tlaiaoaloe, qujiaoaloe in quauhxicalli, mjtotiuh: auh cexiuhlica in muchioaia, ipan ochpaniztli.

CHILILICO.

In chililico: vncan mjquja in tlatlaltiti in chicunauhecatl, ioalnepantla: auh cexiuhlica in vncan mjquja tlatlaltiti: auh çan tlatoque in vncan tealtiaia, çan no ipan in atl caualo.

COOAAPAN.

In coaapan: vncan maltiaia in coatlan tlenamacac, çan qujmjxcaviaia, aiac oc ce vncan maltiaia.

PUCHTLAN.

In puchtlan: vncan onoca in tlenamacaque, in

deposited incense, those who offered incense there above [on the pyramid] Temple of Yiacatecutli. [This they did] quite daily.

ontletemaia, in ontlenamacaia, vmpa jicpac yiacatecutli iteupan: çan mumuztlae.

ATLAUHCO

Atlahco: there dwelt, there lived the fire priests who deposited incense, who offered incense there above [on the pyramid of] Uitzilinquatec. Likewise [this was done] daily.

ATLAUHCO.

In atlahco: vncan onoca, vncan nenca in tlenamacaue, in vmpa ontletemaia, ontlenamacaia, in ijcpac vitzilinquatec yteupan: çan no mumuztlae.

YOPICO

Yopico: there was slaying there; very many captives died there. And there died the ones whose names were Tequitzin⁴ and Mayauel. And when they died it was by day, not by night. And they died at the time of [the feast of] Tlacaxipeualiztli; and [this was done] each year.

IOPICO.

In iopico: vncan mjcovaloia: in vncan, cenca mjiequjntin mjquja in mamalti: yoan vncan mjquja in jtoca catca tequjtzin, yoan maiavel: auh in mjquja cemjlhujtl, amo ioan: auh ipan in tlacaxipeualiztli mjquja, yoan cexiuhlica.

THE TEMPLE OF YIACATECUTLI

The Temple of Yiacatecutli: there the impersonator of Yiacatecutli died, by day, not by night. [This was done] at the time of [the feast of] Tititl, also each year.

IYACATECUTLI ITEUPAN.

In yiacatecutli iteupan: vncan mjquja in jiacatecutli ixiptla: cemjlhujtl, amo ioan: ipan in tititl, no cexiuhlica.

THE TEMPLE OF UITZILINQUATEC

The Temple of Uitzilinquatec: likewise the impersonator of Uitzilinquatec died, likewise by day, likewise at the time of [the feast of] Tititl. Also this was done yearly. It was a woman who died.

VITZILINQUATEC ITEUPAN.

In vitzilinquatec iteupan: çan no vncan mjquja, in ijxiptla vitzilinquatec: çan no cemjlhujtl, çan no ipan in tititl, no cexiuhlica in muchioaia: cioatl in mjquja.

YOPICO CALMECAC

Yopico Calmecac: there was slaying there; very many captives died there, also at night at the time of [the feast of] Tlacaxipeualiztli, also every year, there at the *calmecac* of Youallauan.

IOPICO CALMECAC.

In iopico calmecac: vncan mjcooaia, vncan mjquja cenca mjec in malli: çan no ioaaltica, ipan in tlacaxipeualiztli: no cexiuhlica, vncan icalmecac in ioal-laoan.

4. Tequitzin: the name should probably be Izquitecatl as in Chap. 19, above (fourth movable feast). See also Charles E. Dibble and Arthur J. O. Anderson, *Florentine Codex, Book IV, The Soothsayers* (Santa Fe: School of American Research and University of Utah, 1957), p. 17. Cf. also below, in the appendix on "Those Who Served in All the Houses of the Gods": Izquitlan teuhatzin.

YOPICO SKULL RACK

Yopico Skull Rack: there they strung up the severed heads of captives and those whom they striped [slew in gladiatorial sacrifice] at the time of [the feast of] Tlacaxipeualiztli. [This] also [they did] yearly.

SKULL RACK

[This] Skull Rack was the skull rack of [the Temple of] Yiacatecutli. And there they strung up the severed heads of captives who died above on the [pyramid] Temple of Yiacatecutli at the time of the first day of [the month of] Xocotl uetzi.

THE TEMPLE OF MACUJLMALINALLI

The Temple of Macuilmalinalli and of Topantlacaqui: there [priests] sang for and offered sacrifices to these [gods], Macuilmalinalli and Topantlacaqui. And they offered sacrifices to them every two hundred and sixty days. Also they came after the others. It was at the time of the day count Flower.

ATICPAC

Aticpac: there [priests] offered sacrifices to the Cuateteo when they observed the feast of the day sign Seven Serpent.

NETLATILOYAN

Netlatiloyan: there they laid away the skins [flayed from the women impersonating] the Cuateteo, who died there at Xochicalco each year, at the time of [the feast of] Ochpaniztli.

ATLAUHCO

Atlahco: there they offered sacrifices to [the goddess] Cuateotl of Atlauhco. And when [the impersonator of] Cuateotl of Atlauhco died, it was there at Coatlan, at the base [of Atlauhco. This was done] yearly, also at the time of [the feast of] Ochpaniztli.

IOPICO TZOMPANTLI.

TZONMOLCO CALMECAC

Tzonmolco Calmecac: from there came the fire, which they named Xiuhtecutli. There Moctezuma took the fire when he offered incense, and there the fire drill fell [to make the new fire] yearly, at the time of [the feast of] Uauhquiltamalqualiztli.

TEMALACATL

Temalacatl: at that place there was the striping [gladiatorial sacrifices]; there they striped very many captives. And thus were striped indeed all men who came here from all the lands about us, whom they slew as sacrifices there upon the stone of gladiatorial sacrifice. And there, their functionary was the Bear Man; he set them up on the stone of gladiatorial sacrifice. And when he set a captive up there, thereupon he gave him a pine club, and he gave him a feathered staff. And then went an impersonator to strike him repeatedly — perhaps an eagle or an ocelot [warrior]. Then [the warrior] repeatedly struck the captive, as if a battle were fought. And there his functionary was the one named Chalchiuhtepewa. And when the captive fell, thereupon the Bear Man dragged him off. Thereupon [a priest] slashed open the captive's breast. And the one who slew him was one whose name was Youallauan; he opened [the captive's] breast. And when they had slashed open the breast of the captive, thereupon they cast him down below. And this was done each year at the time of [the feast of] Tlacaxipeualiztli.

THE TEMPLE OF NAPPATECUTLI

Nappateco: there died [the impersonator] whose name was Nappatecutli, only at night, not by day. [This was done] yearly, at the time of [the feast of] Tepeilhuitl.

TZONMOLCO

Tzonmolco: there died the four [impersonators] named Xiuhtecutli. The first was named Blue Xiuhtecutli; the second, Yellow; the third, White Xiuhtecutli; the fourth, Red Xiuhtecutli. And there were still others named Iuipapaneca temilolca. And also [the woman] whose name was Ciuatontli [and] also

[the woman] named Nancotlaceuhqui died, their breasts slashed open.

And when they had died, thereupon Moctezuma came forth there to the Coacalco. Thereupon was danced the lordly dance, and all the men danced. Moctezuma led them; he led [priests impersonating] the various gods. And when there had been dancing, when there had been the serpent dance, thereupon Moctezuma offered incense [to the god].

And this was done at the time of [the feast of] Izcalli, once yearly.

COATLAN

Coatlan: there died [the impersonators] named the Centzonuitznaua, perchance when there was drilling [of new fire] or, yearly, when it was [the feast of] Quecholli tlami.

XOCHICALCO

Xochicalco: there died [the impersonators of] White Cinteotl and Red Cinteotl, and also that one [impersonating the goddess] Atlatonan.

And when Atlatonan died, thereupon they flayed her. And when they had flayed her, then the fire priest put on her skin.

And when day broke, thereupon the fire priest danced; he stood wearing the skin of [the impersonator of] Atlatonan. And this was done yearly, at the time of [the feast of] Ochpaniztli.

YOPICALCO AND EUACALCO

Yopicalco and Euacalco: there stayed the rulers of Anauac who came from distant cities.

And greatly did Moctezuma honor them. There he gave them gifts. He gave them precious capes, precious necklaces, or precious arm bands. Whatever was precious he gave to all of them.

TOZPALATL

The Yellow Waters were very precious. They flowed [as a spring]. There the offering priests took water. And when it was the feast of Uitzilopochtli, and when all the feasts were celebrated, there water was drunk. There the common folk drank water.

5. Here and in instances below, where Sahagún uses the term *calpulli* instead of its locative form (*calpulco*), he specifies in the corresponding Spanish text that a building is meant.

TEZCACOAC TLACOHCHALCO

Tezacacoac Tlacoachcalco: there was slaying there, only sometimes when there were very many captives. And there spears, arrows were guarded. With them there were conquests.

ACATL YIACAPAN UEY CALPULLI

Acatl Yiacapan Uey Calpulli: there they gathered together [the sacrificial victims called] Tlalocs. And when they had gathered them together, then they slew them there.

And when they had slain them, then they cut them to pieces there and cooked them. They put squash blossoms with their flesh.

And when they had cooked them, then the noblemen ate them, all the high judges; but not the common folk — only the rulers.

TECHIELLI

Techielli: there fir branches⁶ were placed.

CALPULLI

All the small houses which were around and which surrounded the temples were called *calpulli*. There was fasting there.

And only the noblemen, the rulers, the constables, the seasoned warriors fasted there every twenty days.

[Of this] it was said: "There is fasting for five [days]."

And when they fasted, five days hence there would be a feast. And only at the time of the feast did they fast.

And thus did they fast: they abstained from food. Some ate at noon; [they fasted] until midnight arrived. And for some the time that they ate was midnight; [they fasted] also [until] the time of midday. Just so they went alternating.

And they fasted for five nights. Not by day but by night. And when it already was night, then they entered [the *calpulli*]. And when it dawned they went forth; they performed their tasks.

Thus they did daily; thus five days passed. And not then did they lie with women.

6. Reeds (*cañas*) in the corresponding Spanish text.

HERE IS TOLD IN WHAT MANNER THE MEXICANS
MADE OFFERINGS AND WHAT THEY MADE AS
OFFERINGS IN THEIR TEMPLES

OFFERINGS

Thus were offerings made: with food and with capes were offerings made, and with whatever kinds of living things — perchance turkey hens or birds; or capes. Or else whatever was newly grown — perchance maize, or chía, or flowers, or whatever [was newly grown].

And thus did the young [unmarried] women make offerings: before dawn their mothers, their fathers woke them. So they went making offerings carried in the palms of their hands — little tortillas, very small ones; thus they quickly went laying gifts before the devil. In bowls they took the gifts; thus they would offer them.

Only in their homes were the tortillas made. Thus did the young women make offerings.

THE OFFERING OF INCENSE

And thus was the offering of incense performed. It was with an incense ladle made of clay, with [stones in its hollows making] a rattle. There in the ladle they laid live coals. When they had scooped them up,¹ then they filled it with copal incense; with it they came forth before the devil or else in the middle of the courtyard, where the brazier stood. [This] was made of clay.

And when they came to stand before the devil, then they raised the incense ladle in dedication to the four directions. Thus they offered incense. And when they had raised it in dedication to the four directions, then they threw [the incense and the coals] into the brazier. Then the copal was smoking.

And thus was it done: the mothers, the fathers likewise woke the children at dawn, whether men [children] or women [children]; that they might offer incense quickly, they woke them. That they

1. In place of *in oconxopiloque*, the *Real Palacio MS* has *yc conxopiloaya in tlexochtli y oconxopiloque tlexochtli* — "with it they scooped up the live coals. When they had scooped up the live coals. . . ."

might not become slothful² this was done in the houses.

THE CASTING OF INCENSE

And the casting of incense was thus done when some statement already was to be uttered; perchance a judgment already was to be uttered: first one cast incense into the fire. For whoever already was to speak, just there lay the incense in a gourd vessel. Or else a singer, when already he was to sing, thus would begin: first he cast incense into the brazier; then the singer began [to sing].

THE EATING OF EARTH

The eating of earth was thus done when there was coming to any place: everyone ate earth; with one finger [they touched the ground and then the mouth], perhaps before the devil, or else in front of the hearth.

And thus was attested, thus was verified the statement. When not much faith was put in a statement, thus was it said to one:

"If what thou sayest is true, eat earth."

Whosoever it was then ate earth; thus he attested to his words.

THE CASTING OF A FOOD OFFERING

And thus was done the casting³ of a food offering: when anything was to be eaten, before it was eaten, perchance of the food first a very small morsel was cut off; it was cast⁴ before the hearth. When it had been cast, then they would begin to eat the food. No one ate first; indeed the food offering was cast first, in front of the hearth.

THE POURING OF A LIBATION

Thus was done the pouring of a libation, when there was pulque-drinking, perchance [when] the pulque feast was celebrated: when anyone newly made pulque, when he increased it,⁵ at this time he

HERE ARE TOLD THE VARIOUS MODES IN WHICH
BLOOD WAS SHED [AND] OFFERED

SACRIFICIAL SLAYING, ETC.

Thus were performed the sacrificial slayings; thus died captives and slaves who were called the divine dead.

Thus they took [the victim] up [to the pyramid temple] before the devil: [the priests] just went holding him by his hands. And he who was known as the arranger [of victims], this one laid him out on the sacrificial stone.

And when he had laid him upon it, four men each pulled on his arms, his legs. And already in the hand of the fire priest lay the flint knife with which he was to slash open the breast of his ceremonially bathed one.

And then, when he had laid open his breast, he at once seized his heart from him. And he whose breast he laid open lay quite alive. And when [the fire priest] had taken his heart from him, he raised it in dedication to the sun.

THE DRAWING OF STRAWS [THROUGH PARTS
OF THE BODY]

The drawing of straws was thus done, only it was at a time of a reasonable day sign that straws were drawn.

And quite everywhere [was it done], perchance on one's ear [lobe], or, whoever willed it, his tongue or his thigh. And to pierce one's flesh, a thorn-like obsidian point [was used]. And then they drew through there a twig or a straw. And in order to pull them through his flesh, the twigs [were tied] with a cord in order to draw them through there, in order to perform penance.

And when the twig had been passed through, next day the twigs and straws were swept up. They were much bloodied. And this was done in the home of the devil or along roads where there were devils.

THE OFFERING OF THORNS

The offering of thorns was thus performed: they plucked fir branches and cut maguey spines, and they bloodied them. Thus they laid two maguey spines on the fir branches as offerings.

Everywhere one laid the maguey spines as offerings in perhaps two places, or three places, or five places. It was quite of one's own will.

THE BLOODYING

When they bloodied themselves, thus did they do it: with an obsidian blade one cut [the lobes of] one's ears, and then they let the blood flow from about the ears.

THE CUTTING OF THE EAR [LOBES]

Likewise the bloodying was a cutting of the ear [lobes] when one bloodied oneself, when one cut one's ear [lobes].

THE TWISTING OFF OF THE HEADS [OF BIRDS]

The twisting off of the heads [of birds] was thus done: when they twisted the necks¹ of small birds before the devil, also they dedicated [the blood] to him. They cast [the body] there before the devil. There the body of the small bird lay beating its wings.²

THE EATING [OF SACRIFICIAL VICTIMS' BLOOD BY THE GODS]

Thus was done the eating [of sacrificial victims' blood by the gods]: when [the priests] had cut open a slave's or a captive's breast, then [the owner] took [the victim's] blood in a vessel, and, perchance, cast a paper into the vessel, which drew up the blood.

Then he took it in the vessel; he placed upon the lips of all [the images of] the devils the blood of him who had died for the gods.

THE PAYMENT OF A DEBT [TO THE GODS]

The payment of a debt [to the gods] was thus done: when mayhap something had befallen one, perchance sickness, when he recovered, then perchance he paid his debt with incense or paper [spotted with liquid rubber]. Because he had not died, he paid his debt in this manner; because, verily, [otherwise] he would have died.

THE SPREADING OF FIR BRANCHES

Thus was done the spreading of fir branches: from the forest they took green fir branches in order that [bloodied] maguey spines be laid upon them as offerings. First they spread out the fir branches; upon them they laid two bloodied maguey spines as offerings.

THE PILING UP OF WOOD FOR THE GOD

The piling up of wood for the god was thus done: they took green wood from the forest; they cut it in order that it burn there in the home of the devil. They piled it up for themselves. Those did it who lived in the home of the devil when they performed penances.

THE SWEEPING

The sweeping was thus done: much did they constrain, much were constrained the children, whether women [children] or men [children], that there in the homes, in their courtyards, they sweep.

And when they had first swept, before dawn, then they made their offerings carried in the palms of their hands, which they laid before the devil. And when they had gone to make the offerings, then they took up their incense ladles that they might offer incense.

VIGILS. 1. ALL-NIGHT VIGILS

Thus was a vigil kept: it was at night.

They who dwelt there in the home of the devil, who kept watch during the night, remained very wakeful, that they might not leave undone their

HERE ARE TOLD, IN VERY TRUTH, THE OFFERINGS WHICH THEY MADE, WITH WHICH THEY PAID HONOR TO THE DEVIL

THE SWALLOWING OF SERPENTS

Thus was it done. Those who swallowed serpents at the time that water tamales were eaten did this. They were known as Maçateca. [The serpents] went quite alive when they swallowed them. They just seized them with their mouths; they went cutting them to pieces [with their teeth], in order to swallow them. And when they had swallowed them, then they were given gifts, as was told in [its place. This was when] water tamales were eaten every eight years.

THE SWALLOWING OF FROGS

And thus did they swallow frogs. Likewise they went alive; likewise it was done at the time [that serpents were swallowed]; likewise those Maçateca did it.

MAKING BIRDS FLY

Thus was it done. Birds were made to fly at the time of [the feast of] Etzalqualiztli. The youths tied the birds to wooden poles; with them they danced at the time that there was a procession.

PROCESSIONS

Processions were thus undertaken. For whatever feast went established, when this was done, all the people went in procession perchance at dawn or at sundown. Then there was dispersing.

SINGING IN THE MANNER OF WOMEN

And the singing in the manner of women was thus done. When, mayhap, [the image] of whatever devil took form, at that time everywhere the women

WITH WHICH SIMILARLY THEY PAID HONOR TO THE
DEVIL

IMELAVACA IN OC CEQUJ TLAMANALIZTLI IN
ÇAN NO IC QUJMAVIZTILIAIA DIABLO.

TYING [AN OBJECT] OVER THE BREAST

NEELPILIZTLI.

Thus was done the tying [of objects] over the breast.¹ In order that there be the tying [of objects] over the breast, they tied their [sickly] small children with loose cotton thread about their wrists and their necks, and placed their ration of a small tortilla made of green maize there in a small carrying frame, and they set up a small earthen jar at one corner of the carrying frame. It went full of water [as] one's hand ration. And when the time of the twenty-day period when it was known as Teotl eco came to arrive, at that time they undid the feathered cords with which the small children were bound.

Injc muchivaia neelpiliztli, inic neelpiloia ica icpatl in qujmjilpiaia pipiltotonti in immaquechtlan, yoan in jnquechtlan yoan in jmjtaç elotlaxcaltotonti in vncan conmanaia vacaltonco yoan tecōtontli, vacalnacazco conquestzaia tentiuh in atl in jmaitac, auh in iqc oacico ipan cempoalilhujtl in iquac mote-neva teteu heco iquac qujntomiliaia in jcpatl potonquj injc omoolpique pipiltotōti.

THE SERPENT DANCE

NECOCOLIZTLI.

And the serpent dance was thus done at the time of the feast of [the god] Acolmiztli. The small children were painted with feathers, with colored feathers, everywhere on their bodies. But the old people applied feathers only to their stomachs, over their hearts, and to their backs. For this reason did they apply feathers to them: it was said that it was because thus Acolmiztli would not bewitch them.

THE ACT OF STRIPING

TLAVAVANALIZTLI.

Thus was done what was called the act of striping. When battle was joined [with] a captive, his shield,

Injc muchivaia in motenehoa tlavavanaliztli in iquac malli moiauchivaia ichimal imaquauh imac

1. *neelpiliztli* is omitted in the *Real Palacio MS.*

his war club lay in his hands; his war club no longer had obsidian points. But they who striped had their shields, their war clubs with which they fought in gladiatorial sacrifice as if they fought the captive or the slave.

THE LYING ON REEDS²

For five days there was lying stretched out on reeds as penance was done for Tlaloc. This was when [the body of the representative of Tlaloc] was placed in a cave. Leave was taken of [Tlaloc] in one's house.³

THE PLACING [OF XIPES] UPON THE STRAW

The placing [of Xipes] upon the straw: of those who flayed the skins of men, some put on the skins, those who were named Xipes. And straw was shaken out; on it they set⁴ [the Xipes]. Hence was it said that there was the setting [of Xipes] on the straw.

THE NOURISHING [OF THE SUN OR OF THE FIRE]

The nourishing was thus done. When the ear [lobes] were cut, they spattered the blood upward or they sprinkled it into the fire. Thus, it was said, they nourished the fire and the sun.

THE SPREADING OF FRESH SPROUTS

The spreading of fresh sprouts was thus done. When there had been going to pluck fresh sprouts,⁵ then they were spread everywhere upon the altars. No one failed [to do so]; it was [done] indeed everywhere. This was known as the spreading of things which had been plucked by hand.

THE SPREADING OF A BED OF STRAW

The spreading of a bed of straw was thus done. Like eating earth, it was fitting when somewhere

4. Following *qujnvalmanaia*, the *Real Palacio MS* has *in xixipeme*.

5. Following *omocujo*, the *Real Palacio MS* has *quauhila*.

there was issuing where stood the image of the devil. Thus [when] there was issuing in his presence, one pulled up straw; one shook it out before the devil when one issued before him.

Still others [did so] when they followed the road and when it was during war. It was as if there were supplication because of it. When someone went where there was war, in case something might go amiss with him, he said:

"Not here shall I die; it is in war that I go to die."

And when already battle was joined, he first plucked grass, shook it out toward the sun; he said:

"He will perish, this one; may he die" or "He will take captives."

It was as if thus a vow was made to the sun.

THE BLOWING OF TRUMPETS

Thus was done the blowing of trumpets. When it was already late at night, when already midnight was coming to arrive, at that time trumpets were blown, so that there be the offering of blood in the home of the devil. Therefore were [the priests] wakened.

ILLUMINATION WITH FIRE

Thus was done the illumination with fire. When we people⁶ had reached midnight, trumpets also were blown. Thus were men wakened; thus those known as drum-beaters began the keeping of the watch. And on him who could not wake up they poured water or shook [coals of] fire, or else they cast him into the water there at Tlilapan or Coapan.

THE PIERCING OF EAR [LOBES]

The piercing of ear [lobes] was also undertaken because of the devil. Hence were ear [lobes] pierced.

THE PIERCING OF THE [LOWER] LIP

In the same manner that there was the piercing of the ear [lobes], so also, because of the devil, was undertaken the piercing of the [lower] lip.

A DECLARATION OF ALL THOSE WHO SERVED IN THE HOMES OF EACH OF THE GODS

THE KEEPER OF THE GOD OF THE MEXICANS

Thus did the Keeper of the God of the Mexicans adorn himself: he had his sleeveless jacket, his incense ladle, his pouch; with them he paid honor to the devil. And so did he keep watch that indeed it was a matter of his being like a father in the *calmecac*. He was like the ruler of the [lesser] keepers of the gods indeed everywhere.

And all the children were left with him that he might train them, that he might bring them up by his words, that they might live well. And whether men ruled, or were rich, or led others, directed things, all this was the charge of the Keeper of the God of the Mexicans.

And also this one commanded in the temples everywhere; he told the [lesser] keepers of the gods what they might do. And if perchance any should err, the Keeper of the God of the Mexicans knew all of it.

THE KEEPER OF THE GOD OF UITZNAUAC, OMACATL

The Keeper of the God of Uitznauac similarly maintained usages just as the Keeper of the God of the Mexicans maintained usages. Likewise he oversaw, in the *calmecac*, that they brought up the children well.¹

THE KEEPER OF THE GOD OVER OTHERS

The Keeper of the God over Others: his overseeing was similar to the way the Keeper of the God of the Mexicans oversaw. For in truth he commanded all how they should oversee in the *calmecac*; how they should rear the children, how they should bring them up; indeed all that [the lesser] keepers of the gods everywhere did.

1. Following *tlacaaqapaoia*, the *Real Palacio MS* has *tenonotzaia* — "he corrected them."

The function of Ome tochtzin was that he gathered together the Centzontotochtin [singers], indeed all of them. None should fail.² And over them presided [the one named] Patecatl, who became, as it were, their leader.

Then [Patecatl] set up the rabbit [pulque] jars. There he filled them with [ceremonial] five[fold] pulque, which they called sacred pulque. Then he brought forth the sucking tubes, [made of] reeds. He laid them there³ with the sacred pulque — two hundred and sixty of them. But only one was bored through.

And when he had set them out, thereupon there was dancing, there was a procession.⁴ The Centzontotochtin danced.

Thereupon they went up to the sacred pulque. There was much jostling, that whoever it was might find [the reed which was] bored through. And whoever found [and] took up the perforated [reed], then they left him alone.⁵

Only he alone stood drinking the sacred pulque. And when the sacred pulque had been drunk, then there was departing.

EPCOAQUACUILTZIN

The Epcoaquacuiltzin: behold what were his duties. When feasts should be celebrated, when perchance the [fifty-two] years should be bound — verily all feasts — he directed everything, so that there would be the depositing of incense. Indeed all that was to be done, all that he commanded, he directed.

THE KEEPER OF THE GOD OF MOLONCO

The Keeper of the God of Molonco also had this function: he issued directions for the paper, the incense, the [liquid] rubber, the black stain, all that this one required when [sacrificial victims] died, and the black stain with which was painted [the impersonator of the god] Chiconauhecatl. And he

issued directions for the incense ladles, the quail, and the black feathers with which [the impersonator of] Chiconauhecatl was feathered.

[THE PRIEST OF] CİNTEOTL

The function of [the priest of] Cinteotl was that he directed indeed everything; he commanded that the paper, the incense, the [liquid] rubber, the *yiauhltli* which he needed for [the goddess] Xilonen when her feast day came, be gathered together. And he issued directions for all the [things and] incense ladles required at Ocoecalco⁶ when [the impersonator of] Xilonen died.

THE KEEPER OF THE GOD OF ATEMPAN

The Keeper of the God of Atempan: behold what was his function. This one directed, issued commands that there be gathered together the feathers, and the eagle down, the eagle beaks with which [the impersonator of] Toci was feathered when she died.

And this one summoned the Huastec youths to do penance there at Atempan.

THE CARETAKER

The Caretaker took care of the songs of the devils, of indeed all the sacred songs, that none might do ill [with them]. He took great care that they teach the sacred songs, and he issued summons so that the singers or the lords be assembled⁷ so that they would be taught the sacred songs.

THE KEEPER OF THE GODDESS OF TZAPOTLAN

The function of the Keeper of the Goddess of Tzapotlan was similar to what the function of the Keeper of the God of Atempan was like. For likewise he directed, commanded all that there be gathered together the paper, the incense, the [liquid]

6. *o calli*: we accept *Ocoecalco*, following the interpretation given by Miguel León-Portilla in *Ritos, sacerdotes y atavíos de los dioses* (Mexico: Universidad Nacional Autónoma de México, Instituto de Historia, Seminario de Cultura Náhuatl, 1958), pp. 90–91.

7. Following *monechicozque*, the *Real Palacio* MS concludes this paragraph with *in macevalti ynic vel q'matizque yn cuicatl* — "the commoners" were assembled "so that they could know the songs."

rubber, and the *yiaubtli* which [the impersonator of] Tzapotla tenan required when she died.

THE KEEPER OF THE GOD OF TECANMAN

The Keeper of the God of Tecanman directed that there be torches, faggots. And it was the function of this one that he collect the red ocher, the black stain, and the foam sandals, the sleeveless jacket, and bells which [the impersonator of] Xiuh-tecutli, the old god, required when he died.

TEZCATZONCATL OME TOCHTLI

Tezcatzoncatl Ome tochtli: this one likewise issued directions for the sleeveless jacket, the bells, the foam sandals, the paper, the heron feather head-dress, the pine flowers. Hence he commanded that there be gathered together, that there should come forth all the offerings which [the impersonator of] Tezcatzoncatl needed when he died. This was done at the time of [the feast of] Tepeilhuitl.

OME TOCHTLI YIAUHQUEME

Ome tochtli Yiauhqueme likewise issued directions for the paper, the incense, the [liquid] rubber, and the foam sandals, the bells, the sleeveless jacket, the heron feather headdress, the pine flowers. Hence he commanded that all that was mentioned be gathered when they were required when [the impersonator of] Ome tochtli Yiauhqueme died. This was also at the time of [the feast of] Tepeilhuitl.

OME TOCHTLI TOMIAUH

The function of Ome tochtli Tomiauh was that he issued directions for all that was required when [the impersonator of] Ome tochtli Tomiauh died — the paper, the incense, the [liquid] rubber, the bells, the sleeveless jacket, indeed all that was mentioned. This was also at the time of [the feast of] Tepeilhuitl.

ACALUA OME TOCHTLI

Acalua Ome tochtli: likewise this one's function

In acalhoa vme tochtli çan no iehoatl itequjuh

was that he issued directions for all that formed the function of Tomiauh Ome tochtli.

QUATLAPANQUI OME TOCHTLI

The function of Quatlapanqui Ome tochtli was that he issued directions for the paper, the incense, the sleeveless jacket, the bells, and the obsidian sandals which [the impersonator of] Quatlapanqui Ome tochtli required when he died. This was at the time of [the feast of] Panquetzaliztli.

TLILHUA OME TOCHTLI

Tlilhua Ome tochtli: likewise this one issued directions for the paper, the incense, the bells, all that was mentioned, which likewise this one, [the impersonator of] Tlilhua Ome tochtli, required at the time of [the feast of] Tepeilhuitl.

OME TOCHTLI PÂTECATL

Ome tochtli Pâtecatl: this one gave life to the five[fold] pulque; he left it in the hands of the craftsman, the one who made the sacred pulque at the time of [the feast of] Panquetzaliztli, when the five[fold] pulque was used.

OME TOCHTLI NAPPATECUTLI

Ome tochtli Nappatecutli issued directions for the paper, the incense, the [liquid] rubber, indeed all that was required when [the impersonator of] Nappatecutli died, at the time of [the feast of] Tepeilhuitl.

OME TOCHTLI PAPAztac

Ome tochtli Papaztac: this one also made the pulque which was called "chalky pulque." This one gave it to Moctezuma, and at that time indeed all the small children, or the men, or the women drank pulque, at the time of [the feast of] Uey toçoztli.

THE SAME OME TOCHTLI⁸

Similar was his function. His function was [like that of] Ome tochtli Papaztac, but it was done at the time of [the feast of] Atl caualo.

CIUAQUACUILLI

The function of the Ciuacuacuilli was [to assemble] all the offerings which were required there at the Temple of Atenchicalcan [Toci] — the flowers, the tobacco, which she laid before Toci; verily, all the things which the women offered when the hand-holding dance was danced. All this was the function of the Ciuacuacuilli.

CIUAQUACUILLI IZTAC CIUATL

The Ciuacuacuilli Iztac ciuatl also kept watch there, took care there at [the Temple of] Atenchicalcan and issued directions for the sweeping, the laying of fires. And any who made vows there spoke to the Ciuacuacuilli Iztac ciuatl. This one pronounced judgment on all that was done in [the Temple of] Atenchicalcan.

THE KEEPER OF THE GOD IXCOÇAUHQUI AT TZONMOLCO

The function of the Keeper of the God Ixcoçauhqui at Tzonmolco was [to obtain] wood for [the god] Xiuhtecutli. He made public announcement that there be going to get [it] in the forest. And those who gathered it were only the youths whose function it was. And when they had gone to gather wood for Xiuhtecutli, they piled it up at the *calmecac* in Tzonmolco.

TLAÇOLQUACUILLI

The function of the Tlaçolquacuilli was that he kept watch there, he took care there in [the Temple of] Mecatlan. And he put on his sleeveless jacket;

8. In the *Real Palacio MS* this paragraph reads: *In Ome tochtli ipan tlatovaia in tlaqualli, in ietl, in xochitl ioan in amatl, in copalli, in ie isquich omito auh itech monequia in Ome tochtli, in icoac motonalia ipan Atl cauallo* — "Ome Tochtli issued directions for the food, the tobacco, the flowers, and the paper, the incense, all the things mentioned, and what Ome Tochtli required when offerings were made at the time of Atl caualo."

he had his gourd for tobacco. Great was the veneration in the temple there at Mecatlan. No one urinated there; but if anyone did urinate there, they then seized him, they took him within;⁹ there they punished him, they bled him.

THE KEEPER OF THE GOD AT TECPANTZINCO

The Keeper of the God at Tecpantzinco kept guard, took care at [the Temple of] Tecpantzinco, and it was his function that he issued directions about the offerings. He made public announcement that offerings be made at [the Temple of] Tecpantzinco.

EPCOAQUACUILLI TEPICTOTON

The Epcoaquacuilli¹⁰ Tepictoton directed the songs. When anyone was to mold figures [of the mountain gods], this [figure-molder] spoke to [the Epcoaquacuilli Tepictoton], who chose, who summoned the singers, so that they would go to sing in the home of the one who was to mold [mountain-god] figures. Verily, this one, the Epcoaquacuilli Tepictoton, passed judgment on [the songs].

THE KEEPER OF THE GOD AT THE TEMPLE OF IXTLILTON

The Keeper of the God at the Temple of Ixtlilton presided over, issued directions, made public announcements [concerning] the gifts, when the small children, whether men [children] or women [children], began to talk. They went carrying their gifts of incense, or flowers, indeed all the gifts that were made. Each of these things they bore with them.

THE KEEPER OF THE GOD XOCHIPILLI AT ATICPAC

The Keeper of the God Xochipilli at [the Temple of] Aticpac issued directions concerning [the impersonator of the goddess] Aticpacalqui ciuatl. He assembled the paper, the incense, the [liquid] rubber which the Aticpacalqui ciuatl [impersonator] re-

13. Following *qujnechicovaia*, the *Real Palacio MS* has *inic mochichioia* — "with which he was arrayed."

THE KEEPER OF THE GOD AT IZQUITLAN

The Keeper of the God at Izquitlan issued directions for the sleeveless jacket, the bells, and the foam sandals, and the sacred pulque. He took the syrup [from a maguey plant] in the fields. This [maguey plant] was afterwards broken up, so that no one might drink of it, so that no one might take it.

THE KEEPER OF THE CHACHALMECA GOD AT TZAPOTLAN

The Keeper of the Chachalmeca God at Tzapotlan issued directions for [this], that [the impersonator of] the man of Tzapotlan be ornamented [and supplied with] paper, incense, and incense ladle, all the things which [the impersonator of] the man of Tzapotlan required when he died at the time of [the feast of] Tepeilhuitl.

THE OLD PRIEST OF CHALCHIUHTLI ICUE ACATONAL

The Old Priest of Chalchiuhtli icue Acatonal issued directions about the offerings [and] made public announcements about all that [the impersonator of] Chalchiuhtli icue required at the time that she died: the pine nut skirt, the water skirt, and all the paper, the incense, and so forth.

ACOLNAUATL ACOLMIZTLI

Acolnauatl Acolmiztli issued directions about all the adornment with which Moctezuma was adorned at the time that he fasted. Only at the time of the great feasts did he fast: at the time when there was fasting for Tlaloc, and when there was fasting for the sun, and when there was fasting for [the feast of] Quecholli. He issued directions about the cape, the sleeveless jacket, and the foam sandals.

THE KEEPER OF THE GOD TOTOLTECATL AT TOLLAN

The Keeper of the God of Tollan issued directions for what [the impersonator of] Totoltecatl required:

IZQUJTLAN TEUHOATZIN.

In izqujtlan teuhoatzin ipan tlatovaia, in xicolli, in tzitzilli, yoã in poçolcactli: yoan teuvctli, concuicuja in necutli in mjlþã, iehoatl in qujn omotlapan in aiaiac quj, in aiaiac concuj.

A DECLARATION OF HOW THE SUN WAS SERVED,
AND OF HOW MANY TIMES TRUMPETS WERE BLOWN
DURING THE DAY AND DURING THE NIGHT, AND OF
HOW MANY TIMES INCENSE WAS OFFERED

Each day, when the sun arose, quail were slain and incense was offered. And thus were quail slain: they wrung the necks of the quail; they raised them dedicating them to the sun.

And they greeted [the sun]; they said:

"The sun hath come to emerge, Tonametl, Xiuhpiltontli, Quauhtleuanitl. But how will he go on his way? How will he spend the day? Perhaps something evil will befall his common people."

They said unto him:

"Perform thy function! Work, O our lord!"

And this each day was thus done when the sun arose, [as] hath been said.

And thus was incense offered: it was four times during the day and it was five times during the night. The first time was when the sun showed itself here. The second time was when it was time to eat. The third time was when it was midday. And the fourth time was when the sun had already set.

And at night, thus was incense offered. The first time, it was when it was dark. The second time was when it was time to go to sleep. The third time was when the shell trumpets were sounded. The fourth time was at midnight. And the fifth time was near dawn. And when it was dark, incense was offered; the night was greeted.

It was said:

"Youaltecutli, Yacauitztlil hath extended here. But how will his task fall?"

And the feast day of [Youaltecutli] came at the time of the day count Four Movement, every two hundred and sixty days. And when the feast day came, there was fasting; there was fasting for four days. And when the feast day of the day count arrived, at noon shell trumpets were sounded; straws were drawn through the flesh. And they cut the ear [lobes] of small children lying in the cradles. And everyone drew blood. And there were then no greetings. There was only the drawing of blood; straws were drawn through the flesh; incense was offered. Everyone [did so]; no one was abstaining.

And there¹ was the image of that one, [the sun, upon] the so-called Quauhxicalli. There his image was set up. His image was designed as if it had the mask of a man; his sun's rays shot forth [from it].² His sun costume was round, enclosed by feathers, enclosed by roseate spoonbill feathers. There in his presence the fasting was done, [and] the passing of straws through the flesh, the laying of offerings, the slaying of quail.

And at the time of his feast day, also many captives died. And also it was said that those who died in war went to the home of the sun; they dwelt with the sun.

A DECLARATION OF THE TRAINING OR THE LABORS WHICH WERE DONE IN THE TEMPLES, IN THE DEVILS' HOUSES

THE EDUCATION OF MEN

The fire priest, who educated [the young priests], left them in the hands of the offering priests, those who dealt blows, those who guarded.

ADMONITIONS

For this reason he admonished them: that they live well, that they not spend their time in pleasures, that they not live lazily.

SWEEPING

So that they would sweep the courtyard of the temple, he cried out to all the little offering priests that they should sweep.

THE LAYING OF FIRES

And he constrained them to lay the fires; so that they be watched, there was reclining by the fires.¹ And indeed everywhere in the temple courtyard fires were laid in the braziers. There perchance ten rows [of them] burned — very many [of them].

GUARDING DURING THE NIGHT

Those who were doing penance took care of the guarding during the night. It was the function of those who were prudent.

THE CARRYING OF WOOD

The carrying of wood: with it they kept guard as it burned at the *calmecac*. The very young offering priests got it, those not yet very prudent.

1. in tletitlā in the Real Palacio MS.

THE CUTTING OF MAGUEY SPINES

The cutting of maguey spines: those who cut them were the offering priests who were not yet much experienced. They were the ones who gathered them.

THE CARRYING OF FIR BRANCHES

The carrying of fir branches: likewise they who were offering priests got them, and these were already experienced.

THE BLOWING OF SHELL TRUMPETS

The blowing of shell trumpets: this was the function of the young offering priests, and those who were already experienced went mixing with them.

THE DISSOLVING OF BLACK COLORING

The dissolving of black coloring was the function of the young offering priests. They dissolved the black coloring. Everyone anointed himself with it; indeed they put it on like a costume when they anointed themselves. No one failed [to do so]. And they dissolved it there in the black coloring boat, and the black coloring was dissolved at night, and there was anointing at the time that the dawn arose.

A DECLARATION OF HOW THE DEVILS WERE
PRAYED TO, AND HOW OATHS WERE MADE

When an oath was taken, when someone promised his child to the devils, in perchance two [temples] or in three he promised what he would do for the devils. Perhaps [because] his young son had been struck or for whatever had befallen him, at that time he promised that he would perform penances to them.

And also when an oath was taken, when someone made a statement to one, in order that he verify it, he was told:

"In order that thy statement be verified, in order that thou wilt not lie, eat earth."

When, then, whoever made some statement ate earth, he thus verified his statement. In order not to be thought a liar, he said:

"Well doth the sun, the lord of the earth, know that already I have eaten earth."

Like that, thus, were oaths taken.

And if it was a supplication, it was done only with these: the offering of incense, the paying of a debt, and the eating of earth, the paying of a debt.

Evil of omen
Dweller in cloudland

Tetzaviztli,
ia mixtecatl,

1. In translating the sacred songs, we have depended heavily upon Angel María Garibay K.'s versions in *Veinte himnos sacros de los nabuas* (Mexico: Universidad Nacional Autónoma de México, Instituto de Historia, Seminario de Cultura Náhuatl, 1958; hereafter referred to as Garibay, *Viente himnos*), as well as upon those in Eduard Selser's essay, "Die religiösen Gesänge der alten Mexikaner" (*Gesammelte Abhandlungen*, Vol. II, pp. 961–1107). Both authorities should be studied by the reader who wishes as full an understanding as possible of their meaning. In the *Florentine Codex*, the songs are untranslated and lack the glosses to be found in the *Real Palacio MS*.

In the *Florentine Codex*, Sahagún comments concerning them: "Costumbre muy antigua es, de nro aduersario el diablo: buscar ascondrijos, para hazer sus negocios: conforme a lo del sancto Euangelio, que dize. Quien haze mal, aborrece la luz: conforme a esto, este nro enemigo, en esta tierra planto, vn bosque, o arcabuco, lleno de muy espesas breñas, para hazer sus negocios, desde el, y para abscondirse en el, para no ser ballado: como hazen las bestias fieras, y las muy ponçñosas serpientes. Este bosque, o arcabuco breñoso, son los cantares, que en esta tierra el rrdio, que se biziessen, y usasen, en su seruicio: y como su culto diujno y psalmas de su loor, ansi en los templos, como fuera dellos: los quales lleuan tanto artificio, que dizen lo que qujeran, y apregonan lo que el manda: y entiendenlos solamente aquellos, a qujen el los endereça. Es cosa muy aueriguada, que la cueua, bosque, y arcabuco, donde el dia de oy, este maldito aduersario, se absconde, son los cantares, y psalmas, que tiene compuestos: y se le cantan, sin poderse entender, lo que en ello se trata, mas de aquellos que son naturales, y acostumbados, a este lenguaje. De mamera, que seguramente se canta, todo lo que el quiere, sea guerra, o paz, loor suyo, o contumelia de xpo, sin que de los demas se pueda entender."

As for our transcription of the songs for our Nahuatl column: they appear in simple paragraph form in the MS, more or less as we reproduced them in our first edition of "The Ceremonies." In the present edition, we have rearranged them in the versified form we have adopted, but have not otherwise changed them except to italicize certain sounds (*aia*, *yia*, *yio*, *uiya*, etc.) which, according to Garibay, in *Poesia náhuatl*, 3 vols. (Mexico: Universidad Nacional Autónoma de México, Instituto de Historia, Seminario de Cultura Náhuatl, 1961), Vol. I, p. xxviii, n. 14, have only metric value or indicate the sounds of musical instruments when not accompanying voices, or are "palabras de exclamación que probablemente eran para dar base al canto sin palabras" (Garibay, *Viente himnos*, p. 33). These have no other meaning, and the MS does not clearly separate them in the song texts.

Whether because of surviving archaisms; or of distortions due to their poetic expression, their presentation sung and danced, their having been constantly and unthinkingly repeated; or of mistakes in copying the text, the Nahuatl is very difficult. Our notes suggest readings in keeping with the Nahuatl of the *Florentine Codex* for the most obscure passages. These are based upon both Garibay's commentaries in *Veinte himnos* and Selser's in the *Gesammelte Abhandlungen*. It may be noted that Selser places more confidence in the explanatory glosses to be found in the *Real Palacio MS* than Garibay does, and that he is perhaps less thorough in eliminating elements which probably have only metrical value or imitate accompanying sounds, as previously noted.

Garibay's translations into Spanish are rather free. While ours follow many of his suggestions, they are in some ways perhaps freer. We do not invariably accept his translations; sometimes we have preferred Selser's and sometimes we have accepted neither. In dividing the songs into "stanzas," we have followed the arrangement of the Nahuatl text as it is in both the *Florentine Codex* and the *Real Palacio MS*.

2. *yauhqui* or *yaqui*.

3. *in aco in ai*.

4. Garibay (*Veinte himnos*, p. 34) considers *ohuibuibuiya* as a "reiterative" form of *ouia* or *obuia* (*otli* or *obtili*, road, path, with the transitive verbalizing suffix *-huiya*). The corresponding gloss in the *Real Palacio MS* interprets this and the preceding line as *ayac nechne-ne-rilia*, a reading with which Selser agrees — "Niemand ist mir gleich" (*Gesammelte Abhandlungen*, Vol. II, pp. 964, 967).

5. *anen*.

6. *tozquemilt*.

7. *que*: read *quen*; *tonaqui*: read *tonac*.

You have but one foot
Dweller in chill land of wings⁸
You open your hand⁹

Feathers are given the hot region's¹⁰ ramparts
Broadcast they fly
Proclaimers of war
My god is entitled defender of men

Already he rises all covered with paper¹¹
A hot region dweller¹²
He circles in dust
A hot region dweller
He circles in dust

The Amanteca are our foes
About me place yourselves
In battle form¹³ there's going to war
About me place yourselves¹⁴

teuhtla mjlacatzōa *ia*.

Amanteca toiahoan
xinechoncentlalizqui *via*,
icalipan iautioa
xinechoncentlalizqui.

8. *pichauaztecatl*: Garibay (*Viente himnos*, p. 36) derives his meaning from *pichau*, stiffen with cold, and *aztli*, wing.

9. *moma*.

10. *tlaxotla*, *tlaxotecatl*: we accept Garibay's derivation from the verb *xotla* (*Viente himnos*, p. 37). Seler, however, interprets the passage as the allotting of feathers to the "gens" (*tenamitl*) of Tlaxotlan (*Gesammelte Abhandlungen*, Vol. II, pp. 969–70).

11. The corresponding gloss in the *Real Palacio MS* derives *mamauia* from *mauhitia*.

12. See note 10, above.

13. In *ibid.*, the gloss interprets *icalipan iautioa* as *tlatlaz yn incal* — "their houses will burn."

14. *xenech* . . . : read *xinech* . . .

In the *Real Palacio MS*, the following lines end the song: *Pipilteca toyavan xinechoncentlalizquiria icalipan yautiva xinechoncentlalizqui*.

My seasoned warrior's in the spear house
 Such is what I hear¹
 The man puts me to shame
 I think myself ill-omened
 I think I go to war
 Yet it has been said²
 My seasoned warrior's in the spear house
 They laugh³
 They talk
 It is my house as lord

The Tocuiletec is panting⁴
 Eagle robes lie variously
 In Uitztlan

By the youths of Olopan
 My captive lies emplumed
 I'm afraid
 I'm afraid
 My captive lies emplumed

By the youths of Uitznauac
 My captive lies emplumed
 I'm afraid
 My captive lies emplumed

By the youths of Tzicotlan
 My captive lies emplumed
 I'm afraid
 I'm afraid
 My captive lies emplumed

The priest of Uitznauac⁵
 Came down to the marvel⁶
 The sun shone
 The sun shone
 He came down to the marvel

The priest of Tocuillan
 Came down to the marvel
 The sun shone
 The sun shone
 He came down to the marvel

1. Seler (*Gesammelte Abhandlungen*, Vol. II, pp. 971, 973) takes the particle *aia* as negative.

2. *oc itoloc*.

3. *in uesca*.

4. *ihiaquetl*: Seler (*Gesammelte Abhandlungen*, Vol. II, p. 974) equates the term with *iyac*; cf. *iaque* or *telpochiaque*. Garibay (*Viente himnos*, p. 44) equates it with *ibiyaqui*, derived from *ibiyotl*.

5. *vitznaoac teuhoaquj*: we read *teuhoaquj* as *teobua* (god-keeper or priest); cf. also Seler, *Gesammelte Abhandlungen*, Vol. II, p. 975. Garibay (*Viente himnos*, pp. 41, 46) prefers to derive the term from *teotl* and *aqui* and translates the phrase "Se mete el dios en Huitznahuac."

6. *machiotlan*.

In Mexico
 God's goods are borrowed
 Among paper flags¹
 And² in the four zones
 Are men standing up³
 And also⁴ it's their time for tears

But I've been formed
 And for my god
 Of bloody flowers of corn
 A festive few⁵
 I take
 To the god's court⁶

You are my warrior
 A sorcerer prince
 And⁷ though⁸ it is true
 That you made our food
 You the first man
 They only shame you

Whoever shames me
 Knows me quite ill
 You are my fathers⁹
 My priesthood
 My jaguar serpents

In Tlalocan
 In the turquoise boat
 Is one who comes
 And is unseen¹⁰

1. *amapanitlan*.

2. *an*: equivalent to *auh*.

3. As the gloss in the *Real Palacio MS* interprets the phrase, the banners stand erect: likewise Seler (*Gesammelte Abhandlungen*, Vol. II, p. 978).

4. *yequene*.

5. Read *ilhuiçolli*. Garibay, in *Veinte himnos*, p. 56, takes the meaning he assigns the word from *ilhuitl* and *çolli*, cluster, handful, which he derives from *çoa*. Seler (*Gesammelte Abhandlungen*, Vol. II, p. 985) prefers to follow the gloss, *ÿ vmpa ilhuiçololo* — "wo man den ganzen Tag das Fest feiert."

6. *teoitualco*.

7. *aqu* (*ac*): equivalent to *auh*.

8. Read *intlanel*.

9. Read *annotahuan*.

10. Garibay (*Veinte himnos*, p. 59) reads *ac ua motta*, which he takes to be equivalent to *auh amotta*. Seler (*Gesammelte Abhandlungen*, Vol. II, pp. 980, 988), modifying the gloss, translates the phrase "dein Vater."

With mist-bringing rattles
To Tlalocan taken

My brother Tozcuecuexi
I shall go and go¹¹
It's his time for tears

Dispatch me to the place of mystery¹²
His words come down
And I have told
The omen-lord
That I shall go and go
It's his time for tears

In four years
There will be swept¹³ on us¹⁴
Unaware
No longer¹⁵ counted men
In the land of the unfleshed
In the house of quetzal plumes
Where together rejoice¹⁶
The creatures of him who forms men

To all places go
To all places reach
To Poyauhtlan

11. Der. *yauh*, possibly repetitive because of reduplication.

12. *quenamican*.

13. Read *necauilo*. The gloss in the *Real Palacio* MS, evidently preferring to read the phrase as *topan ecauilo*, is accepted by Seler (*Gesammelte Abhandlungen*, Vol. II, pp. 981, 991) — "man hat es über uns kommen lassen." Garibay (*Veinte himnos*, p. 62) translates it as "entre nosotros habrá un levantamiento general."

14. *topan*.

15. *ayamo*.

16. *nepan* plus *auia* or *abuia*. Garibay (*Veinte himnos*, p. 63) prefers to derive it from *panabuia* and translates the phrase (p. 52) "se hace la transformación." Seler appears to prefer to regard it as a verbal noun, *nepanavian*, "Ort des Reichthums" (*Gesammelte Abhandlungen*, Vol. II, p. 992).

SONG OF TETEO INNAN

The yellow flower blossoms
She's our mother
With the godly thigh-skin mask¹
Tamoanchan's where you started²

The yellow flower is your flower³
She's our mother
With the godly thigh-skin mask
Tamoanchan's where you started

The white flower blossoms
She's our mother
With the godly thigh-skin mask
Tamoanchan's where you started

The white flower is your flower
She's our mother
With the godly thigh-skin mask
Tamoanchans' where you started

The goddess on the barrel cactus⁴
Is our mother
The obsidian butterfly

Let us find her
In the ninefold steppes
She'll be feeding on deer hearts
She our mother
She the goddess of the earth

With new chalk
With new feathers
Is she covered
In all four quarters⁵
Darts lie in fragments

A deer's what she's become
There on the desert plain
They come to find you
They
Xiuhnel and Mimich

1. *chipuchica*: Garibay (*Veinte himnos*, p. 80) relates the term to modern Mexican *chipote* (bruise, hump, swelling) a term colloquially used in reference to advanced pregnancy, and to a postulated Nahuatl *chipobitli*. Santamaria (*Diccionario*, p. 103) traces *chipote* to *xipotli* (cf. *xipocheua*). Seler (*Gesammelte Abhandlungen*, Vol. II, p. 1006) derives it "durch Metathesis aus *ichpochca* u. *ichpochtli ica* . . . 'von der Jungfrau.'"

2. Garibay (*Veinte himnos*, pp. 77, 81) reads *moquichivi ivi in*.

1. Read *notecubane*.

2. In *Gesammelte Abhandlungen*, Vol. II, pp. 1008, 1013, Seler argues that "In . . . dem Haus der Verkleidung ist die Verkleidung (der Maskentanz) herabgekommen." Reference to disguises in the next stanza may support his interpretation.

3. *cuico*.

4. *xoxolo*: pl. of *xolotl*.

5. *avjia*: see Garibay, *Veinte himnos*, pp. 83, 90. The *Real Palacio MS* reads *ovica*.

6. *tontecutli*: read *tetecutin*.

7. Read *iteicnelil* or *inteicnelil*, following a suggestion in the corresponding gloss in the *Real Palacio MS*.

O little woman
Summon the people
Mist-house dweller
In the region of rain
Summon the people

Hujia cihuatontla
xatenonotza
ayiauhcalcatl
qujiavatla
xatenonotza.

From bewitchèd seven caves
Alone I went my way¹

From bewitchèd cactus² lands
Alone I went my way

I came down³
I was born⁴
I came down with my cactus-shaft dart
I was born with my cactus-shaft dart

I came down
I was born
I came down with my netted back-pack

In hand I take it
In hand I take it
And in hand I take it
In hand I take it
And in hand he has it⁵

Niquimacui,
njqujmacuj,
yoa *ia* njqujmacuj,
njqujmacuj
yoan *jaaio* macuj

1. A "Chichimec" phrase, according to the gloss in the *Real Palacio MS*; see Garibay, *Veinte himnos*, pp. 93–95; Seler, *Gesammelte Abhandlungen*, Vol. II, p. 1021. For *can j* read *çan in*.

2. *Tzivactitlan*: *iziuactli* is *garambullo* in the Mexican vernacular, according to Garibay (*Veinte himnos*, p. 96), which Santamaría (*Diccionario*, p. 550) identifies as *Cereus garambullo*, *Pisonia capitata*, or *Rosa mejicana*. Reference is to Chicomoztoc, Garibay says.

3. *nitemoc*: metaphorically it can also mean "I was born."

4. *Ibid.*

5. In the last five lines the meaning is highly problematical. These are followed in both the *Florentine Codex* and the *Real Palacio MS* by the lines *Tluchili icpac aia, vel in cujaia quetzalcoxcoc aia, qujunqujlia cinteutla, oay*. Since they logically belong with the Song of Xochipilli, we have included them at its beginning. See Seler, *Gesammelte Abhandlungen*, Vol. II, p. 1024; Garibay, *Veinte himnos*, pp. 98–100.

SONG OF XOCHIPILLI

Over the ball court the fine pheasant sings¹
Making replies to the corn god²

Already our friendly ones sing
Already the fine pheasant sings
By night did the god of corn shine³

He'll hear only my song
He who still has the bells⁴
He with the thigh-skin mask
He will still⁵ hear my song
He Cipactonal

I give commands
As giver of things in Tlalocan

As given of things in Tlalocan
I give commands

I have only just reached here
Where the roads are united
Only the corn god am I
Where shall I go?
Where shall I follow the road?

Givers of things in Tlalocan
Gods who give rain

Aiao, aiao, aiao, tlallocan tlamacazquj,
qujaví, teteu, *ayiao, aia, aiao*.

1. Garibay (*Veinte himnos*, p. 103) identifies *quetzalcoxcotli* as *Pauxis galeata* or *Crax globicera*, referring to Francisco J. Santa-maría's *Diccionario general de americanismos*, 3 vols. (Mexico: Editorial Pedro Robredo, 1942), Vol. II, p. 428, under the term *pauji*.

2. As Seler (*Gesammelte Abhandlungen*, Vol. II, p. 1025) interprets the line, Cinteotl replies to the *quetzalcoxcotli*.

3. *ilao*: read *ilaui*. Seler (*ibid.*, pp. 1025, 1028–29) reads *ilaocinteutla*, which he equates with *ilailaubqui cinteotl*, "der rotke Maisgott."

4. Translated as "der Herr der Zeit, wo es noch Nacht ist" in *ibid.*, p. 1029.

5. *o*: read *oc*.

SONG OF XOCHIQUETZAL

From watery mistland¹
 From near there² came I?
 I Xochiquetzal?
 Not as yet
 It's the house at the brink
 And³ in Tamoanchan

You have wept until⁴ now
 Wind priest Piltzintecutli
 He seeks Xochiquetzal⁵
 To mist lands of turquoise⁶
 For our sake he goes

SUCHIQUETZAL ICUJC

Atlaiaiva

 tencali
 va tamoanchan *oay*.

Ie quj tichoca *ia*
 tlamacazecatla piltzintecutlon
 quj *ya* temoa *ia ieo* tochiquetzalla
 xoiavjia *ay*
 topan jaz, *oay*.

1. *Atl-ayau-can*.

2. *tlacia*: read *itloc*.

3. *ra*: read *iu*an.

4. *ie quin*. Seler (*Gesammelte Abhandlungen*, Vol. II, pp. 1032, 1034) accepts the explanation of *yequitichoca* in the corresponding gloss in the *Real Palacio MS* (*choca*): "Es weint der Fromme Piltzintecutli."

5. Read *Xochiquetzalli*.

6. Read *xiuh-ayau-yan*.

Cotiuana, cotiuana
 It's the house where rabbits stay¹
 You have come to linger²
 At the gate of exit³
 I have come to linger
 At the house of darts
 Stand there
 Come to stand there
 I only go afar
 I only go afar
 I only go afar

Already I am taken
 I am sent
 I am sent
 It's to his duck I'm sent⁴
 I am sent
 It's to his duck I'm sent

Let him hasten⁵
 It's his duckling
 Let him hasten
 It's his duckling
 It's his duckling

With obsidian I rejoice me
 With obsidian I rejoice me
 With obsidian I rejoice me

yvaian, ie canauhtzin j.

Aueia itzipana nomahujlia
aveia itzipana nomavilia,
aveia itzipana nomavilia.

1. *Cotiuana*: meaning unknown. Perhaps a place? Perhaps somehow related to *tlauana*, considering the subsequent reference to rabbits? The gloss in the *Real Palacio MS* says that the entire poem is "Chichimec" and incomprehensible.

2. Read *timanico*.

3. Read *quixoa*.

4. Seler suggests that these four lines mean "er umschleicht die Enten" (*Gesammelte Abhandlungen*, Vol. II, p. 1037).

5. Read *ixtotoca*.

In Nonoalco¹

In Nonoalco

Is flowery scent²

In shielding pines

It clothes itself³

mexicame *ia.*

A chimalica *ia xo, xa v in oqu jia, vilili*

noioco,

navaco

mexicame *ia.*

1. Read *Nonoalco*.

2. Read *poyoma*: same as *poyomali*, unidentified aromatic-narcotic fern, root, or possibly flower (Charles E. Dibble and Arthur J. O. Anderson, *Florentine Codex, Book X, The People* [Santa Fe: School of American Research and University of Utah, 1974], p. 88, n. 39). It is further commented upon by Garibay in *Veinte himnos*, p. 121.

3. *motlaquenuia*.

4. *nj*: read *inin*. Seler reads the phrase *avetziini*, "der Herabfallende" (*Gesammelte Abhandlungen*, Vol. II, pp. 1038, 1040).

5. In the *Real Palacio MS*, the spelling may be *niquetzal ce atlj*. If so, it is Quetzalcoatli in another aspect, according to Garibay, *Veinte himnos*, p. 125.

6. In *Veinte himnos*, pp. 119–20, 124, Garibay regards Cuecuexin as a Tepaneca god-name related to Quetzalcoatli. Seler relates the term to *macuextli*, *chalchiuhcucuextli*, etc., draws attention to *cucuextzin* as a term of endearment applied to those dead in war, and translates it as "das Edelsteinarmband" (*Gesammelte Abhandlungen*, Vol. II, pp. 1038, 1043).

7. *ca ne, ca ia itziueponj*: read *ca ni-ecatli itziuepani*, a practical possibility suggested in Garibay, *Veinte himnos*, pp. 119, 125–26. Seler's reading (*Gesammelte Abhandlungen*, Vol. II, pp. 1038, 1044) is as *canin cueponi*, "wo blühte er auf?"

8. Garibay (*Veinte himnos*, pp. 117, 127) reads this as *noyonco* and relates the term to Nonoalco; "podremos aventurar la versión que doy," he says, while admitting as also possible Seler's translation as "im Nachbarlande" (*Gesammelte Abhandlungen*, Vol. II, pp. 1038, 1044).

9. *ia avilili, jia vilili*: Garibay (*Veinte himnos*, pp. 117, 127) reads these as *ja avilili*; the verb is applicative of *avia*. He reads *xo, xa v in oqu* as *Xaxa! Aub in oc*. For Seler, these phrases are *iyauililli*, "wurde er dargebracht" and *xaxaubiyoc*, "mit Bemalung versehen" (*Gesammelte Abhandlungen*, Vol. II, pp. 1039, 1044).

10. *Ibid.*

1. *Quavi*: *quauhin*, equivalent to *quauhtli*.

2. A compound of *xayacatl* and *yaualoa* is suggested by Garibay (*Veinte himnos*, p. 139). Seler follows the gloss in the *Real Academia* MS, *yc oxavaloc in coaezili*—"mit Schlangenblut ist sie bemalt" (*Gesammelte Abhandlungen*, Vol. II, pp. 1048, 1054).

3. *vivia*: read *iuihuia* (*ihui(tl)-huia*). Seler favors the gloss's *iuau* (*Gesammelte Abhandlungen*, Vol. II, pp. 1048, 1054).

4. *alochpan*: read *ualochpan*. Seler considers a headdress called *uitzalochtli* possible (*ibid.*, pp. 1048, 1054).

5. *tonacaacxoima* (*tonacaacxolma* in the *Real Palacio* MS): cf. *tonacatl* and *acxoyatl*. Garibay (*Veinte himnos*, pp. 136, 142-44) prefers "*Ea! Donde se tienden los abetos (país) de nuestro origen*," which he supports with references concerning Xochitlalpan, Tlalocan, Xochicalco, etc.

6. Read *centeomilco*.

7. Read *mailactli omei*.

8. Seler (*Gesammelte Abhandlungen*, Vol. II, pp. 1049, 1057) translates the phrase as "*lege mir nieder*"; cf. *temi* in Siméon, *Dictionnaire*, p. 420.

9. Read *yaociuatzin*.

10. Read *imaça* or *in maçatl*.

11. *ipotoca*: cf. *potonia*.

The sun proclaims the war¹²
Let men be dragged away
It will forever end¹³
Deer of Colhuacan
In plumage arrayed

Eagle plumes are no mask
For he rises¹⁴ unmasked

12. The phrase is repeated in the *Real Palacio MS*.

13. Read *cempoliuiz*.

14. *iecoiametl*: cf. *yeconi* or *econi*. Seler (*Gesammelte Abhandlungen*, Vol. II, p. 1050) translates the last two lines thus: "*Adlerfedern sind eure Bemalung. Der im Kriege tapfer kämpft, eure Bemalung.*"

HERE IS THE SONG SUNG EVERY EIGHT YEARS
WHEN WATER TAMALES WERE EATEN

My heart is a flower bursting open
It is lord of the night's half-way point¹

Our mother has come²
The goddess has come
Carnality's goddess

Cinteotl³ was born in Tamoanchan
Where the⁴ flowers lift their heads
He is One Flower

Cinteotl was born in the rain-mist⁵
Where are made the children of men⁶
Where fishermen fish the jade fish

Now will the sun rise
Now will the day dawn
Let all the various firebirds
Sip nectar where flowers stand erect⁷

On earth
You stand yourself up
Near the market place stars⁸
[You] are the lord
[You] Quetzalcoatl⁹

Let there be rejoicing
By the flowering tree
Hear all the firebirds
The various firebirds
Our god speaks
Pay him heed
His firebird speaks

1. Read *quimotlatia*.

2. *Icnocauhqui*. The corresponding gloss in the *Real Palacio MS* explains: *ye otechcaub ÿ mayanaliztli* — "famine has already left us." Garibay interprets it similarly: "*me ha hecho mercedes*" (*Veinte himnos*, p. 175). Seler translates: "*es verliess mich (die Hungersnoth)*" (*Gesammelte Abhandlungen*, Vol. II, p. 1071).

3. Seler (*Gesammelte Abhandlungen*, Vol. II, pp. 1072, 1076) considers the verbs in these two lines optative and hence subjunctive in meaning — "*Es mag sein, das ich dabingehe, dabingehe, um zu Grunde zu geben.*"

4. *Ni-ouatzin* (cf. *ouatl*).

5. *No-c-on-ittaz*.

6. Read *aco ixayac*.

7. Read *niouatzin*.

8. Seler transcribes these seven lines as *Noteua ce intlaco xayailiviz çonoa yyoatzin motepeyocpa mitzvalitta moteua*, and translates them thus: "*Mein Gott, ein Stück lass im Ueberflusse vorhanden sein die Maispflanze, es schaut nach deinem Berge, zu dir hin, dein Verehrer*" (*Gesammelte Abhandlungen*, Vol. II, pp. 1072, 1077–78).

9. Read *noyolceuz*.

SONG OF CHICOME COATL

Seven corncob
Now arise
Now wake up¹
It is our mother
You are going to leave us bereft
You are going to your home² in Tlalocan

Now arise
Now wake up
It is our mother
You are going to leave us bereft
You are going to your home in Tlalocan

AN ACCOUNT OF HOW THE WOMEN SERVED THERE IN THE TEMPLES

Behold the life of the priestesses when [their mothers] vowed them [to service] there in the great temple.

When they took them into [the temple], it was when they were still very small, perhaps after they were already twenty [days old] or after they were forty [days old]. And in order to take them, in order to leave them, they just took them in their arms; they just went in their mothers' arms. And they went with their brooms, which went filling the children's arms. And they bore their incense ladles and incense. Not yet did fire go [in the ladles]; later the old priest decided where the incense ladles would be required.

And when she had gone to dedicate the little girl, then she took her [away]. She left there only the incense ladle and the incense. And this old priest commanded that the mother not abandon her child because of lack of regard, and that [the child] not leave off, because of lack of regard, going to leave the brooms and the incense, or wood shavings, every twenty days there at the *calpulco*.

And when it was seen to be proper, when already she was a maiden, purely of her own will she went into the *calpulco*. And purely of her own will she performed the face-veiling [ceremony]. Also she went taking the incense ladle, the incense.

And when she was a grown woman, if this priestess was asked [in marriage], and if the words were well based, if the fathers, the mothers, the men of the neighborhood, the noblemen consented, then a number of things were bought. They bought quail, and incense, flowers, tobacco, and an incense ladle. And food was bought.

Then this priestess thereupon went to perform the face-veiling. She took with her all that had been bought, as was told. And that with which she veiled the face was a cape called *tlacaquachtli*; it had many heads [worked upon it]. Thereupon they laid out a very large cape, a *quachtli*. Thereupon they set forth the offerings in a reed vessel; there they placed the gifts which they called fast foods. They were only

UNIVERSITY OF GOTHENBURG
LITERATURE, HISTORY OF IDEAS, AND RELIGION

Huarochirí Manuscript

A text analysis of the Huarochirí Manuscript
with focus on afterlife and worship

By Gerrit Kieke

Termin: Vårtermin 2014
Kurs: RKT230 Religionsvetenskap 15 hp
Nivå: Magisterexamen
Handledare: Daniel Andersson

Abstract

Based on the Huarochirí Manuscript, this thesis seeks to elaborate a picture of religious aspects in the culture of the Andean region of Huarochirí in late 16th and early 17th century. I decided to elaborate on two themes which are in the center of this research. My focus lies at first on afterlife concepts as they often have influence in religious thoughts and hence practices. Myth and ritual descriptions are scrutinized in order to obtain significant information about this theme. The second research part is concentrated on worship practices and to what extent people were obligated to perform rituals, and what freedoms in this context they had. Combined, these two themes present aspects of people's life with regard to religion in the transition period from pre-Spanish to colonial Andean society. The results show a continuation of Andean afterlife concepts but a change in related rituals. The same was recognized for general worship, as people were hiding their belief in pre-Spanish religious concepts under the pressure raised by Christian officials. Freedoms and obligations shifted from Andean to Catholic religion, while the economic pressure often increased, also, due to greedy catholic priests. With the help of previous research and the work of Jürgen Osterhammel on colonialism, my thesis is inspired and oriented on renowned scholarly inquiries. I worked with a qualitative content analysis and narrative analysis as described by Dag Ingvar Jacobsen, Göran Bergström and Kristina Boréus to obtain data from the text.

Keywords: Afterlife, Andean culture, Colonial theory, Conquistadors, Huaca, Huarochirí Manuscript, myth, narrative analysis, Peru, qualitative content analysis, ritual, worship.

Chay simiri kaymi ...

(And the story is like this...)¹

1 Introduction

Blood, corpses and body parts were themes to the picture of forced cultural change in the Andes. They were also the precondition for the Huarochirí Manuscript and hence, for this thesis. During the process of this investigation, this thought never left my mind and made it sometimes difficult to prevent polemic or sarcasm of entering the following pages. However, this thesis is not about human atrocities and terror; it is about the change in religious behavior due to invasion and occupation.

It was the desire for gold and wealth which motivated the Conquistadores to slaughter² their way through an unknown land; it was also involved when the priest Francisco de Avila with the beginning of the 17th century started his campaign against what was then called idolatry. With the impressive title Extirpador de Idolatrías and the approval of the Catholic Church, he and his companions raided the country in search for treasures, leaving tortured and devastated people behind. Avila possessed intelligence in form of a manuscript which described local myths and rituals in the region of Huarochirí. It also provided information about places and huacas, and the priest just followed the descriptions which led him in many cases to the desired treasures.³

In the twentieth century the manuscript was rediscovered in Madrid and was henceforth known under the title Huarochirí Manuscript. Its origin and intentions may be accompanied by the dark side of human experience, but its existence today sheds light on this distant past

¹ The three main parts of this thesis are introduced by Quechua sentences from the original manuscript. This has an aesthetic purpose but also provides an opportunity for the reader to get an idea of the Quechua language; even if just very limited.

² I borrowed this term from Kim MacQuarrie as he used it to describe the Spanish behavior during the struggle for occupation. Kim MacQuarrie, *The last days of the Incas*, (London: Portrait, 2007), 84.

³ In the spirit of an interest-waking introduction, it is slightly poetical. For an extensive description of Avila's actions see: Frank Salomon and George L. Urioste, *The Huarochirí Manuscript* (Austin: University of Texas Press, 1991), 27; and Antonio Acosta, "Estudio biográfico sobre Francisco de Avila de Antonio," in *Ritos y tradiciones de Huarochirí: manuscrito quechua de comienzos del siglo XVII*, 1. ed. Antonio Acosta and Gerald Taylor (Lima: Instituto de Estudios Peruanos, 1987), 551-616.

and on a people between two cultures. It provides a chance to discover cultural features or characteristics and some of them will be the focus in this thesis.

What defines a culture? There are probably many aspects which can be highlighted and the selection is surely related to the academic discipline or field oneself is involved with. The focus could lie on economics, art, language, or politics. However, since I am involved with the study of religion, this thesis is concentrated on religious aspects. Here too, further differentiation is needed in order to formulate a sufficient question which fits the parameter of this academic task. Thinking about religion and the consequences for the people involved, a major aspect of most religions are the religious rules. In case of the Abrahamic religions as well as for Hindu religions, Buddhism and many others, these rules are often sustained by ideas about the afterlife. There are other reasons why people follow religious rules, e.g. the love to a god or belief, but e.g. it is the idea of heaven and hell, in a Christian context, without which this religion would lose significance for many people. Without the promise of a good reincarnation or the threat of a bad one and the final promise to unite with him, a Krishna devotee would probably reevaluate his or her religious behavior. My point is, depending on convictions about the afterlife, believers shape their lives accordingly. Thus, afterlife conceptions can tell us a lot about cultural expressions because they are one of the reasons for religious rules, rituals and behaviors. Therefore one part of my thesis is dedicated to afterlife conceptions and related rituals revealed in the manuscript.

The second part of the thesis is occupied with discovering worship obligations and freedoms of the people, who lived in late 16th and early 17th century Huarochirí. The focus lies here on ritual descriptions in the text which are also connected to myth descriptions.

Combined, these two themes (of afterlife and worship) should provide enough material to describe religious characteristics in the culture of Huarochirí in late 16th and early 17th century and thereby create a picture which is both, worth to be shared and useful for further research.

1.1 Background

Time and Space

The topic of this thesis is very specific and at the same time, neither popular nor often highlighted by scholars. Previous research, which is briefly described further down, is often concerned with Inca society or Spanish colonization of the Andes. These topics however, are

not in my main focus, as it soon becomes clear. But they do provide valuable information which is incorporated in this thesis in order to reach accurate results. However, it is useful to implement a description of time and space in the beginning of my text to facilitate the understanding by providing an orientation. This part should be recognized as a brief overview and all mentioned information is discussed in detail during the thesis. Furthermore, there are some Quechua terms which are mentioned in the thesis. Their meaning is explained in the appendix.

I describe a period between the Spanish invasion and fully colonization of the region of Huarochirí (in what is now called Peru). It is a time of change, a clash of cultures, which is accompanied by conflicts, but also agreements. People during this period were influenced by the Spanish culture and thereby with Catholic religion and bureaucracy. Yet, the Spanish couldn't control the vast area completely and the Andean people kept part of their beliefs and traditions during this period.

The Manuscript describes the Andean region of Huarochirí which lies in the vicinity, east of Lima. The people in this area are **not Incas** by blood, but after the invasion of the Incas, their territory was dominated and ruled by them. Although the Incas dominated much of the Andes at their zenith, already before them, the different Andean cultures had common features. E.g. the Andean society knew a system of reciprocity, which I described explicit further down. It meant to give something in order to get something. A man helped his neighbor to build a new house and the neighbor returned the favor with the appropriate value. A lord needed support during a war campaign and the support was granted by another lord, under the condition of an expected repayment. This system was not tied to a particular people, but in usage throughout much of the Andean area. In the same way, the veneration of superhuman beings, even if they had different names and origins, had similar expressions in different groups. Offerings for example were essential to religious behavior.

Although there were hundreds of disparate languages and dialects, the most widespread were the Quechuan and Aymaran languages. Quechua was mainly spoken in the north part of the Andes, while Aymara was mainly the language of the south part. People in Huarochirí spoke Quechua and it is also the language of the manuscript. It is a valid point since most scriptures from this time are written in European languages, mostly Latin and the related Castilian. But what does the manuscript describe? The next part elucidates about the content of the manuscript.

The Manuscript

As it will become clear in the later presentation of the manuscript and its creation, there is an apparent Christian influence on the text. Since the manuscript was created to establish knowledge about Andean “idolatry”, a reader is not confronted with a continuous narrative. It is a collection of myth and descriptions of traditions and rituals (plus enumerations of names and dates), often complemented with comments about native contemporary behavior related to them. (Late 16th and early 17th century – contemporary to the author of the manuscript.) The first chapters contain mostly myth descriptions and the author commented on them as well. His comments are e.g.: “Regarding this story, we Christians believe it refers to the time of the flood. But they believe it was Villca Coto mountain that saved them.”⁴ or “Nevertheless, we don’t know the origins of the people of those days, nor where it was they emerged from.”⁵ or “Here’s what we Christian think about it: We think these stories tell of the darkness following the death of our Lord Jesus Christ. Maybe that’s what it was.”⁶ The last commend refers to a story about the disappearance of the sun. This story consists just of eight sentences and they constitute the whole chapter four. Other chapters are much more extensive and contain not just one myth or ritual description, but many which often relate to each other. Overall, we can read e.g. about humans who turn into stones, about mighty supernatural entities which fight each other, about from Inca organized worship, the travel of gods, and 16th/ 17th century worship festivals. All the information in the script is related to the region of Huarochirí and worship places are described as well as directions to find them. Because of the comments, a reader is often reminded of the author’s Christian point of view and the purpose of the manuscript. One term which is continuously utilized in the text and in my thesis is the term *huaca*, and is therefore now explained.

Huaca

The term is interpreted by Salomon as superhuman being and also used in connection with religion, as in *huaca religion*. A *huaca* could be anything, from a stone to a mountain, from a mummy to a golden object or even a river. People believed that they were living supernatural beings with forces which could interfere in their lives. Offerings were necessary if believer wanted help from *huacas*. But to maintain live as it was, annual worship festivals were conducted in honor of the supreme *huacas* in the region. *Huacas* were responsible for rain,

⁴ Salomon and Urioste, *Huarochirí Manuscript*, 52.

⁵ Salomon and Urioste, *Huarochirí Manuscript*, 54.

⁶ Salomon and Urioste, *Huarochirí Manuscript*, 53.

fertility, or protection from enemies, hence, people had to take care of them. This short introduction was intended to provide an overview, an orientation, but all the information is described in detail in the respective chapters in this thesis.

1.2 Aim

This essay has the purpose to reveal religious elements and their influences on native people in the Andean region of Huarochirí, in the transition period from pre-colonial to colonial society, around 1600. My focus lies on themes about life - afterlife relations and worship. To elaborate a conclusive picture, two questions are formulated:

1. What does the myth and ritual descriptions reveal about afterlife ideas and what are the consequences for the believer, recognizable in the manuscript?
2. What does the manuscript reveal about worship responsibilities and freedoms?

Through answering these questions I hope to elaborate a conclusive picture about cultural circumstances with focus on religious aspects in the described time period and place. I further hope to contribute to the understanding of this distant society.

1.2.1 Restrictions

I'm conscious about that a dedicated scholar could fill monographs by elaborating answers to each one of my questions; unfortunately, I had to narrow my focus in order to fit the size of this academic educational task. By putting the manuscript in the center of this research, my results are based on what the manuscript reveals with regard to my questions. With more time and resources I would have collected as much appropriate documents as possible and worked with a comparative content analysis to elaborate a picture of the culture in Huarochirí. However, as many of them are previously scrutinized by other scholars, I use their interpretations to some extent. An interpretation of the manuscript without knowledge about the circumstances of its creation and the social political frame in which it was composed, would lead to arbitrary speculations. Therefore, literature concerning these topics is also included in this research.

The period in question can be seen as starting with the first Spanish influence in the region, which must have been after the invasion of the Spanish in 1532 and ends with the year 1608

when the manuscript first appeared in an ecclesiastical lawsuit. Although it is tempting to speculate about pre-Columbian belief and life, especially with regard to the myth descriptions, I cannot make inferences about the antecedents of myth or ritual characteristics and origins in pre Spanish times. It is certainly possible⁷ to find connections to sources about pre-Columbian religion and hence combine them with the descriptions given in the manuscript. However, limited time and access to resources restricted my research to the described period, and the Huarochirí region. In the manuscript itself one encounters different myths, gods and rituals, depending on which ayllu or village is described. This is also noticed in the manuscript when the author noted the difference of stories concerning religion: "...in each village, and even ayllu by ayllu, people give different versions, and different names, too."⁸ Therefore it is impossible to make conclusions about other places in the Andes, since I have to assume that they also have different myths, gods and rituals. Another aspect in early 17th century life in Huarochirí was Christianity and its growing influence. As the manuscript contains evidence and indications of Christian behavior, native Christian people as part of this society cannot just be ignored. However, a thorough investigation with regard to Christian themes based on the manuscript would have to be complemented with other sources (e.g. lawsuit papers and other 17th century documents) and pointing besides Christian ideology also and probably even more so at social political implications. Yet, without basic information about this topic, the findings in the manuscript would be unclear and distorted. Therefore I used secondary literature which is presented in the following chapter.

Another aspect has to be emphasized, which is that the author writes about different time periods. The oldest period can be called mythical or ancient or pre-Inca period, the following pre-Spanish or Inca period, and finally the transition period in the 16th and 17th century. By reading the manuscript, it is more often than not clear to which period the author refers. But because the myth and ritual descriptions were collected in the transition period, it follows that people still knew these stories and were telling them; therefore the knowledge about them was imbedded in the Huarochirí culture. In this context it is possible to use these stories in an inquiry about the transition period, even when they describe the "old times" or "Inca times".

⁷ E.g. done by Karen Spalding and Maria Rostworowski de Diez Canseco mentioned in chapter 1.2.4 Previous Research.

⁸ Salomon and Urioste, *Huarochirí Manuscript*, 87. Ayllu is a group or society in which the members are related by blood linages or connected by shared believes, behaviors and practices. The term is explicit explained in chapter: 1.3.6 Terms.

Given the landscape in Huarochirí, with deep valleys, plateaus, and high mountains and the distribution of settlements plus available communication at the time, it strongly indicates that people were differently influenced by the Spanish invaders. Therefore, in creating a picture of this society, one has to keep in mind that there were natives already fully converted to Christianity and those almost untouched by it and everything in between. Thus, by looking at e.g. described afterlife ideas in the manuscript, I can make only limited statements about what was known (probably to most natives) and what was still believed (by many). This differentiation is part of the picture I try to develop.

1.3 Material

As said above, my thesis is based on the Huarochirí Manuscript. It is written in Quechua language which I cannot read. There are translations available which vary in their quality and purposes. After analyzing evaluations and literature regarding these translations, I decided to work with Frank Salomon and George L. Urioste's translation and complement it with the PhD thesis from Sabine Dedenbach-Salazar Sáenz. All three scholars are Quechua experts with excellent knowledge about the manuscript. After a short presentation of their work I continue to list and briefly describe other previous researches. Thereafter follows a paragraph dedicated to research and information on the authorship of the manuscript and a summary about utilized terms in this essay. In order to give the reader of my thesis a context to facilitate the understanding, I will start with an introduction of the Huarochirí Manuscript.

1.3.1 Huarochiri Manuscript - A Short Introduction

In 1933, Julián Paz produced for the first time a catalog of American manuscripts in the Biblioteca Nacional in Madrid. The catalog listed an item with the number 3169.⁹ The Huarochiri Manuscript is the fourth in a collection of six manuscripts which are bound together and belonged to Francisco de Avila in the beginning of the 17th century.¹⁰ The Huarochiri Manuscript provides no information about title, author or date of creation,

⁹ Sabine Dedenbach-Salazar Saenz, "Die Stimmen von Huarochirí, Indianische Quechua-Überlieferungen aus der Kolonialzeit zwischen Mündlichkeit und Schriftlichkeit eine Analyse ihres Diskurses" (PhD diss. Universität Bonn, 2003), 148.

¹⁰ Salomon and Urioste, *Huarochirí Manuscript*, 24.

therefore, when listed the first words of the text are used as a title. “*Runa yn.° niscap Machoncuna*”¹¹ (The ancestors of the Indian)

The manuscript is mainly written in Quechua language with an alphabet, introduced in Andean society by Spanish colonialists. It contains 31 Chapters and two supplements. There are two different types of descriptions, one of which is telling myths and stories, while the second one describes rituals. The myths describe huacas, men, and animals which interact with each other, and consist of stories from three different periods. One period is the mythological,¹² pre Inca time, another one is the Inca period and the last one is the early 17th century time, contemporary to the author of the script. The second type of description explains rituals and connected events, which are also placed in the previously described three periods. Dedenbach-Salazar Sáenz differentiates these two types according to myth and ritual descriptions without regard to the different periods.¹³

Around seventy years after the conquistadors occupied this territory, people in Huarochiri were already used to the Spanish presence, to Christianity and European administration. Nevertheless, they were still living in a time of transition and adaptation.¹⁴ Ambitious Christian missionaries were determined to create new pious Christians and to destroy what they called idolatry and misbeliefs.¹⁵ At the same time, they brought the Latin alphabet to the Andes and thereby a possibility to preserve myth and tradition for later generations. Although, scripture provided a tool to do so, it was seldom used in this way and commonly utilized to administrate the colony or for church organization purposes. The Huarochiri Manuscript is therefore valuable to scholars, since it presents a window to a lost culture, a documentation of folk myth, and traditions and practices during the transition period.

The Huarichiri Manuscript was written in or in the near of what is still today the Huarochiri region which is situated in the vicinity east of Lima. The exact year of the manuscript's creation is unknown, however, in 1608, Father Francisco de Avila wrote a text which is partly based on the Huarochiri Manuscript and probably used as intelligence to attack and wipe out

¹¹ Dedenbach-Salazar Saenz, “Die Stimmen von Huarochirí,” 148.

¹² We call it the mythological period, the natives talk about times when gods were born or the world was created.

¹³ Dedenbach-Salazar Saenz, “Die Stimmen von Huarochirí,” 119.

¹⁴ Dedenbach-Salazar Saenz, “Die Stimmen von Huarochirí,” 456.

still existing precolonial beliefs. We do not know if Avila authorized the manuscript, or edited, or even wrote parts of it. Although it is possible that he was creating or partook in its creation, his own text, *Tratado y relación de los errores*, contains parts of the Huarochiri Manuscript and therefore proves his knowledge about it and its existence in 1608.¹⁶ The content of the manuscript reveals a distance but also a proximity to Andean precolonial beliefs, which is an indication of different authors and a final editing stage.¹⁷ One can encounter comments which ask in Spanish after a certain place or remind the supposed reader to search for a named place or huaca. Sometimes the huaca, especially in the later chapters are called demons, a clear hint for the Christian surroundings of the manuscript creation and intended usage.¹⁸ On several places in the manuscript Avila is named and his “positive” role in the community emphasized or implied.¹⁹ On the other hand, the opening lines of the script suggest a positive attitude towards the indigenous culture.

If the ancestors of the people called Indians had known
writing in earlier times, then the lives they lived
would not have faded from view until now.

As the mighty past of the Spanish Vira Cochas is
visible until now, so, too, would their's be.

But since things are as they are, and since nothing has
been written until now,

I set forth here the lives of the ancestors of the Huarochiri
people, who all descend from one forefather;

What faith they held, how they live until now, those
things and more.

Village by village it will all be written down: how they
lived from their dawning age onward.²⁰

The positive attitude is clearly visible in these lines, and in later chapters, the narrator uses the phrase: “We speak of them as the Purum Runa, ‘people of the desolation’.” indicating his own

¹⁶ *Tratado y relación de los errores* belongs to the six manuscripts of item nr. 3169 in the Biblioteca Nacional in Madrid. Frank Salomon on page 24 and Dedenbach-Salazar Sáenz on page 5 and 148 describing the *Tratado*. Both recognize the connection to the Huarochiri Manuscript as Avila commenting on its first 7 Chapters.

¹⁷ Dedenbach-Salazar Saenz, “Die Stimmen von Huarochiri,” 4,5; Salomon and Urioste, *Huarochiri Manuscript*, 24.

¹⁸ Salomon and Urioste, *Huarochiri Manuscript*, 107.

¹⁹ Salomon and Urioste, *Huarochiri Manuscript*, e.g. 74, 103, 120.

native ancestry.²¹ Dedenbach-Salazar Sáenz suggested an early native effort to document the pre-conquest Andean culture. “Ich vermute allerdings, daß das Manuskript nicht erst zu jener Zeit und nicht in diesem Rahmen entstand, sondern früher und zunächst auf eine Initiative Einheimischer hin.”²² With regard to the opening lines, it is not unlikely.

1.3.2 Frank Salomon & George L. Urioste – The Huarochiri Manuscript

My main material and source for this thesis is the translation of the Huarochiri Manuscript by Frank Salomon and George L. Urioste.²³ Their book, *The Huarochirí Manuscript: A Testament of Ancient and Colonial Andean Religion*, 1991, consists of an introductory essay by Salomon, the translation by both authors and a transcription by Urioste. The essay by Salomon was very helpful to establish an overview about the manuscript itself and its possible origins. Combined with Dedenbach-Salazar Sáenz’s thesis (who also commented on Salomon’s work) it is the basis for my work.

I decided to work with the translation by Salomon and Urioste after an examination of available book reviews and responses by other Scholars. In his 1993 published book review on *The Huarochirí Manuscript: A Testament of Ancient and Colonial Andean Religion*, Gery Urton (Dumbarton Oaks Professor of Pre-Columbian Studies at Harvard University; Department of Anthropology) called it “...the first reliable translation into English.” and wrote further: “The Huarochiri Manuscript is obviously the result of years of thoughtful and intelligent collaboration between Salomon and Urioste.”²⁴ Dedenbach-Salazar Sáenz mentioned Salomons essay and translation on several occasions in her thesis, either agreeing with him or utilizing his statements in her argumentation.²⁵ Joanne Rappaport (Professor at Georgetown University, Department of Anthropology) emphasized in her review that, the translation from Salomon and Urioste “... evokes the essentially oral nature of this written

²¹ Salomon and Urioste, *Huarochirí Manuscript*, 54.

²² Dedenbach-Salazar Saenz, “Die Stimmen von Huarochirí,” 5. (My transl.: I suspect, however, that the manuscript was not created at that time and not in this context, but earlier and initially due to a local initiative.)

²³ Frank Salomon is a Professor of Anthropology and at the University of Wisconsin- Madison since 1982. George L. Urioste is professor at the University of Nevada in Las Vegas.

²⁴ Gary Urton, “The Huarochirí Manuscript: A Testament of Ancient and Colonial Andean Religion by Frank Salomon; George L. Urioste,” *American Anthropologist New Series*, Vol. 95, March 1993; Accessed March 20, 2014, <http://www.jstor.org.ezproxy.bib.hh.se/stable/pdfplus/681259.pdf?acceptTC=true&acceptTC=true&jpdConfirm=true>.

²⁵ Dedenbach-Salazar Saenz, “Die Stimmen von Huarochirí,” e.g. 73, 107, 129, 220 and 274.

document.” She continued to describe the positive work of the translators and finished with: “... it allows the indigenous voice in all its complexity to become linguistically and conceptually accessible to English readers.”²⁶ Similar to Rappaport, Maria A. Benavides (Professor at Ohio University, Sociedad Geografica de Lima, and The Latin American Association for Afro-Asian ALADAA) mentioned the advantage of this translation because of its ability to transmit the original oral nature of the texts. However, she especially emphasizes the introduction by Salomon for its factual accuracy and the comprehensible structure and articulation of the text. “The major ethno historical contribution in this volume may well be Salomon's brilliant introductory essay (38 pages).”²⁷

Overall, since it was important to find an accurate translation of the Quechua text into a language I could read, Salomon's and Urioste's book appeared to be the best choice. Other translations are into a language which I don't speak (e.g. into French) or they possess, in the case of the German translation, equal quality but are older and therefore just second choice.

1.3.3 Dedenbach-Salazar Sáenz – Die Stimmen von Huarochirí

Sabine Dedenbach-Salazar Sáenz²⁸ wrote a PhD thesis in 2003 based on her research on the Huarochiri Manuscript. Her aim was to widen our understanding of the Quechua text by emphasizing the transformation from oral to writing traditions and furthermore, to introduce a new method, connected to postmodern approaches, which utilized discourse analyzes and interdisciplinary work, combining ethnohistory, linguistic and literary science. As an expert on Quechua language, she translated parts of the Huarochiri Manuscript for her thesis and utilized linguistic and literary science to reveal patterns and differences in the text which were helpful in elaborating a picture of the transformation process from oral to writing tradition. By complementing her findings with information from the discipline of ethnohistory, e.g. about social and political life in the 17th century Andean society, she obtains knowledge which

²⁸ Sabine Dedenbach-Salazar Sáenz is currently lecturer in Latin American Studies at the University of Stirling, United Kingdom.

enables the reader of her thesis to understand the circumstances of the manuscript's creation and how to approach and to work with the content of the text itself.²⁹

I use her thesis for exactly those reasons, to understand the time of the manuscript's creation and for a better understanding of the text types and their differences. Furthermore, her thesis provided valuable clues and evaluations on previous works on the manuscript which were very helpful in finding a translation most suitable for my own project.

1.3.4 Previous Research

This chapter focuses on research regarding the Huarochirí Manuscript. It will not consider text, myth or ritual research made on other documents. Although they could be useful for my research, the time and resource limitations for this essay permit neither a closer nor an exhausting overview about these themes. However, with regard to my methodical and theoretical approach, some major works and researches are mentioned in the chapter 1.3 Method.

The most common research on the manuscript was done in connection with translation efforts. The manuscript was published in Dutch, English, French, German, Latin, Polish, and Spanish language³⁰, whereas the following are worth mentioning. José Maria Arguedas *Dioses y Hombres de Huarochirí* (1966) was the first complete Spanish translation and contained an elaboration on the origins of the text with focus on Francisco de Avila.³¹ Gerald Taylor's translation into Spanish, *Ritos y Tradiciones de Huarochirí* (1987)³² contains a chapter by Antonio Acosta, *Estudio biográfico sobre Francisco de Avila*, which deals with the origin and Francisco de Avila's role in its creation.³³ Jorge Lagos and Luis Galdames focus in their research on philosophical aspects. In "Entimemas y principios andinos en los Mitos de

³³ Acosta, "Estudio biográfico,".

Huarochirí” (2007)³⁴, published in *Estudios Filológicos*, the scholars show a connection between a myth from the Huarochirí Manuscript and the structure of enthymemes which are informally stated syllogisms.³⁵ Karen Spalding elaborated a picture of precolonial society in the Andes in *Huarochirí: an Andean society under Inca and Spanish rule*, (1984), by using besides other sources the Huarochirí Manuscript.³⁶ Maria Rostworowski de Diez Canseco used the manuscript in the same way in her publication of *Historia del Tahuantinsuyu* (1988).³⁷ She focused her work on political structures and connections between the different parts, especially between the mountain and coastal areas, of the Inca Empire. She also published a study about the connection between religious ideology and politics, including a gender analysis of the huacas under the title: *Estructuras andinas del poder: ideología religiosa y política*, in which she also made use of the huaca descriptions in the Huarochirí Manuscript³⁸. Another research with focus on the authorship of the manuscript was done by Alan Durston and published in *Colonial Latin American Review* in 2007 under the title *Notes on the Authorship of the Huarochirí Manuscript*.³⁹ As I described their efforts already above, I left out the works of Frank Salomon and Sabine Dedenbach-Salazar Sáenz.

I will not conclude that there is no research made which attempts to answer the same questions as I try to do, however, my investigation points at this possibility. The chosen topic is not as popular as e.g. Islam research and e.g. internet search machines produced much less appropriate hits than in the case of the given example. I understand that research on the Huarochirí Manuscript has often focused on the authorship or to obtain clues to Inca and precolonial society. The research of Spalding and Rostworowski is the most relevant for my project with respect to life circumstances around 16th and 17th century, and therefore utilized in this essay.

³⁴ Jorge Lagos and Luis Galdames, “Entimemas y principios andinos en los Mitos de Huarochirí,” *Estudios Filológicos*, Vol 42, September 2007; accessed May 16, 2014, http://www.scielo.cl/scielo.php?script=sci_pdf&pid=S0071-17132007000100006&lng=es&nrm=iso&tlng=es.

³⁵ Syllogisms are a form of logical arguments. This research is mentioned in order to give an adequate research overview.

1.3.5 Authorship of the Huarochirí Manuscript

As already described above, the author of the manuscript is unknown, which is true if one considers the uncertainty of information about an event, taken place 400 years ago. However, it is important to get as close as possible to a conceivable writer and origins. Naturally, Salomon and Dedenbach-Salazar Sáenz dedicated parts of their research efforts to this topic.

For Salomon, Francisco de Avila (1573?-1647), was not directly involved in the writing of the manuscript.⁴⁰ But he most probably used it first to defend himself in an ecclesiastical lawsuit and later its intelligence to conduct massive anti huaca campaigns in 1612 and 1613. Antonio Acosta wrote about the connection between manuscript and Avila's way through the region of Huarochirí:

En estos dos anos Avila declaró haber visitado 35,000 indios, convirtiéndose así en un experto extirpador gracias a su fuente secreta. Siguiendo su itinerario geográfico, pues, resulta bastante claro que la narración mitológica se convirtió en una inapreciable ayuda para Avila, sirviéndole de guía en sus visitas.⁴¹

Avila destroyed countless sacred places and mummies, caused great sufferings amongst the natives and secured him and his Christian and Spanish allies an income, since they had the right to keep treasures which they found on native sacred places.⁴² Salomon relies mainly, but not exclusively on Antonio Acosta's work, a source which is also used by Dedenbach-Salazar Sáenz. Acosta describes the surroundings of the manuscript's origins as sinister. There is Avila, a priest who is accused with a list of serious allegations, beside others, claiming that he had sex with native women, some even married.

Pero Avila daba lugar también a otras quejas de los indios que no eran simplemente de carácter económico. Se trataba, sobre todo, de acusaciones sobre relaciones sexuales con varias mujeres de la comunidad.⁴³

There were also other reasons for this lawsuit as Salomon wrote:

Like many other curates, he was said to collect huge amounts of native crops and sell them for private profit.

⁴⁰ Salomon and Urioste, *Huarochirí Manuscript*, 24.

⁴¹ Acosta, "*Estudio biográfico*," 597. (My transl.: In these two years Avila declared to have visited 35,000 Indians, thus becoming an expert extirpador thanks to his secret source. Following his geographical journey, then it is quite clear that the mythological narrative became an invaluable aid to Avila, serving as a guide for his visits.)

⁴² Salomon and Urioste, *Huarochirí Manuscript*, 27.

⁴³ Acosta, "*Estudio biográfico*," 574. (My transl.: But Avila also gave rise to other complaints of the Indians who were not simply economic. It was, above all, allegations of sex with several women in the community.)

But Avila may have gone too far in helping himself to his parishioners' labor, which he used to support his partly illegal business enterprises in gunpowder, charcoal, and textile manufacture and to build himself a house in Lima using beams he made his parishioners remove from the roofs of their pre-resettlement village.⁴⁴

According to Salomon, the final push into the lawsuit was the plan of the priest Avila to build a textile fabric. Salomon describes the origin of the manuscript by quoting Acosta saying that the manuscript was ordered by Avila as a reaction to the acquisitions, as a kind of revenge and a career enhancing measure. Avila wanted to underline his honest intentions and that the acquisitions against him were forged because of his struggle against idolatry. Salomon mentions also the involvement of a man called Cristobal Choque Casa, an intimate of Avila and of native origins. For Salomon this character played a key role in and around Avila's lawsuit and the creation of the manuscript. Dedenbach-Salazar Sáenz, does not specify his involvement as much as Salomon does, but renders him a possible role in editing the manuscript.⁴⁵

In his article, "Notes on the Authorship of the Huarochiri' Manuscript" (2007)⁴⁶, Alan Durston (associate professor at York University, Department for History) elaborates on a possible authorship and identifies Cristobal Choquecasa⁴⁷ as the writer and editor of the manuscript. According to him, Cristóbal Choquecasa had the means, knowledge and motivation to write it. Durston parallels the statements of Dedenbach-Salazar Sáenz and Salomon with respect to a possible order of the manuscript given by Avila, or at least a close connection between him and the author. However, what is stated by all three scholars is the utility of the manuscript. Its information was successfully used in an effort to expel Andean precolonial beliefs by the Extirpators of Idolatries, amongst them Francisco de Avila.⁴⁸ That would have been impossible if the manuscript contained false information. Thus, the Huarochiri Manuscript contains information about Andean beliefs and traditions which were written down in an effort to obtain intelligence about these beliefs and traditions and therefore, seen in this context are reliable. However, Salomon warns the reader: "The papers

⁴⁴ Salomon and Urioste, *Huarochiri Manuscript*, 25.

⁴⁵ Dedenbach-Salazar Saenz, "Die Stimmen von Huarochiri," 83, 85.

⁴⁶ Durston, "Notes on the Authorship."

⁴⁷ The three sources contain different spellings of the same name: Durston: Cristóbal Choquecasa; Dedenbach-Salazar Sáenz: Cristóbal Choquecaxas; Salomon: Cristobal Choque Casa.

⁴⁸ Dedenbach-Salazar Saenz, "Die Stimmen von Huarochiri," 5; Durston, "Notes on the Authorship,"; Salomon and Urioste, *Huarochiri Manuscript*, 28.

born of this effort offer ethnographic evidence, but because of their heavy ideological freight must be read with caution.”⁴⁹

1.3.6 Ritual and Myth

Since I have focused on ritual and myth descriptions a short explanation is in order. There is much debate on what defines a ritual. I don't want to join this debate, but have no intentions to simply ignore what other scholars have to say about it. I choose to combine statements of Robert A. Segal, Catherine M. Bell and Roy A. Rappaport to justify my elected ritual examples from the manuscript.

Robert A. Segal begins his chapter about ritual with the following sentence: “Whatever else ritual means, it means action.”⁵⁰ Yet, everything people do is action and Segal continues to give an overview about theoretical thoughts on ritual for further differentiation. However, action is a good starting point for a ritual definition. How do I define an action as ritual? According to Catherine M. Bell, one can search for six characteristics which reveal a possible ritual nature of an action. These characteristics are formalism, traditionalism, invariance, rule-governance, sacral symbolism and performance.⁵¹ Most of these characteristics are found in the ritual descriptions in the manuscript. Bell further states that a ritual has to be understood in the social context in which it is performed, and that it depends on concepts of belief.⁵² All ritual descriptions in the manuscript are connected to the belief in the huacas and placed in the social context of the Andean natives in Huarochirí.

Even Rappaport listed a number of characteristics which could reveal a ritual. The foremost one for him is formalism; although it does not necessarily mean that an action is ritualized because it contains formalized performance. Other characteristics are, the legitimation through others, invariance, and performance.⁵³ Similar to Bell's characteristics, even Rappaport's list can be successfully applied to the descriptions in the Huarochirí Manuscript.

⁴⁹ Salomon and Urioste, *Huarochirí Manuscript*, 28.

⁵⁰ Robert A. Segal, “Myth and Ritual,” in *The Routledge companion to the study of religion*, 2. ed., ed. John R. Hinnells (London: Routledge, 2010), 387.

⁵¹ Catherine M. Bell, *Ritual: Perspectives and Dimensions* (Oxford: Oxford University Press, 2009), 139-164.

⁵² Catherine M. Bell, *Ritual Theory, Ritual Practice* (New York: Oxford University Press, 1992), 19.

⁵³ Roy A. Rappaport, *Ritual and Religion in the Making of Humanity* (Cambridge: Cambridge University Press, 1999), 32-46.

The manuscript, especially in the beginning, describes myth from the region of Huarochirí. They present mostly theogonies, but contain also stories which have characteristics of eschatologies and cosmogonies. These stories are not incomprehensibly abstract; moreover, their characters resemble other Native American figures, e.g. the trickster figure⁵⁴ which is also known in European folk literature, in the Märchen der Gebrüder Grimm.⁵⁵ These stories are called myth by Dedenbach-Salazar Sáenz⁵⁶ and Salomon⁵⁷, but what defines them as myth?

In his book⁵⁸ Robert A. Segal gives a definition of myth which is grounded in his expert knowledge about the works of e.g. E.B.Tylor (1832-1917), J.G. Frazer (1854-1941), Bronislaw Malinowski (1884-1942), Lucien Lévy-Bruhl (1857-1939), Claude Lévi-Strauss (1908-2009), and Mircea Eliade (1907-1986).⁵⁹ For Segal, a myth (interesting for a scholar of religion) is a story containing contents about a god or similar concepts. A myth can also be about humans and animals which are involved in something significant in the past or present. The story must be significant for the reader and also present a conviction.⁶⁰ In the Huarochirí stories, the reader encounters gods, humans and animals, which are involved in the creating of the world as it was for the people in Huarochirí four hundred years ago. There are explanations for huaca and worship, the origins of lakes and mountains and also the social structures of the culture.⁶¹

1.4 Method

The following lines reveal the methods I choose and the justifications for their selection. Further down I describe the application of the chosen methods, and additionally I outline the overall process of my investigation.

⁵⁴ Salomon and Urioste, *Huarochirí Manuscript*, 46, 54; and in Eva M. Thury and Margaret Klopfle Devinney, *Introduction to mythology: contemporary approaches to classical and world myths*, 2. ed. (New York: Oxford University Press, 2009), 295.

⁶⁰ Segal, *Myth: a very*, 4-6.

⁶¹ Salomon and Urioste, *Huarochirí Manuscript*, 5-7.

1.4.1 Method presentation

There are surely questions to a scripture which could justify a quantitative approach in a utilized content analysis. However, since I don't want to provide statistics about how many llamas were butchered due to ritual processes described in the Huarochirí Manuscript, or make statements about certain ceremonies based on measurable units in connection with them, I chose to work with a qualitative content analysis.⁶² This gave me the opportunity and ability not just to collect data, but also to interpret text statements and to set different elements in relation with each other in order to reach conclusive and meaningful results. In this way, implicit information became visible and hence could be utilized. To facilitate such a work, it is necessary to implement methodic tools; in my case selection criteria, which are based on the essay's purpose.⁶³ Afterlife and death was one criterion and bound to the first question. For the second question the criteria were the ritual descriptions which make reliable statements about the actual human involvement in religion and religious practices. Any attempt to condensate such information from the myth texts would, according to my estimation, only lead to highly speculative conclusions which in order to fill them with reliability, had to be scrutinized with other methods and complemented with other text sources. However, the chosen selection criteria produce information which can then be analyzed.⁶⁴

Because of the complex cultural circumstances and motivations for the creation of the manuscript which are mentioned above, another important aspect had to be considered. This is how the text is presented to us; which formulation are used and for which purpose. Such an analysis is called narrative analysis.⁶⁵ I use this method to detect eventual existing influences on the text, especially through Christian involvement, which could distort the outcome of the content analysis.⁶⁶

⁶⁵ Bergström and Boréus, *Textens mening*, 25.

⁶⁶ Bergström and Boréus, *Textens mening*, 260.

1.4.2 Process and Method Application

The first decision was made by choosing the Huarochirí Manuscript as the basic source for my research. To my understanding, previous research focused mainly on its history, form and language and content regarding historical events. In order to decide a particular topic which could be matched with the manuscript, I read it to establish a first understanding and to obtain possible research themes. It became clear that the myth and ritual descriptions permitted a closer look at religious expressions and behaviors. My personal interest and the information available in the manuscript shaped the two questions formulated in my aim-paragraph.

The next step was to find the right or most applicable and promising method to scrutinize the text. This resulted in the decision for the qualitative content analysis and qualitative narrative analysis as described above. I then proceeded by structuring the text according to the themes of the questions. As already mentioned these left me with different categories. For the first theme (afterlife) I selected the chapters 1, 5, 6, 9, 14, 24, 25, 27, 28, and 30. They all contained information about death or afterlife. I also separated myth descriptions (chapter 1, 5, 6, 14, 25, 27, and 30) from ritual descriptions (chapter 9, 24, and 28). Both types were then compared and with regard to similarities and differences, a picture of death and afterlife ideas was elaborated.

For the second question, I concentrated on the ritual descriptions. I classified them into three categories; whereas the first two contain descriptions which were selected after the character of the rituals (voluntary or obligated). When a story described a person who went to a huaca in order to ask for a personal favor, the story was situated in the category freedom of worship. When a story described persons or a group which partook e.g. in a ritual in order to ask for rain, or participated in rituals with pure worship reasons (e.g. for the greatness of a god), the worship was assessed as obligated. The third category contains descriptions of worship reality in the times of the manuscript's creation. I recognized that the author of the manuscript told two versions of most rituals. Often, the (for the author) original behavior was described first, followed by the version of the contemporary practiced ritual. This is an advantage for my research, since not only the change of ritual behavior is described, but often also the motivation behind rituals becomes evident. E.g.: The ritual descriptions about food deposits on churches and graveyards do not tell much about obligation and freedom. If we know the pre-Spanish tradition to take care of the dead, to dress and feed them in order to provide for them, but also to avoid the wrath of disappointed ancestors, then it is possible to create a

comprehensive explanation. To purely describe worship behavior (in 17th century) without the original ritual behavior would result in an incomplete picture of this culture. With additional descriptions of life circumstances in the Andes, based on secondary literature, I further believe to raise the reliability of my results.

During the analyzing process, I included information about the Christian involvement and life circumstances without which my results would miss a foundation. As all changes in religious behavior were generated by the Spanish occupation, my research needed to be grounded on such information. In a final effort I summarized my results in order to convey an understandable picture of religious thoughts and behavior in the culture of Huarochirí during the transition period.

1.5 Colonialism Theory

The Huarochirí Manuscript as already described, was written in a Spanish colony. The purpose was to collect information about Andean indigenous culture with focus on religious phenomena and expressions. The presented descriptions alone however, were not sufficient to produce a picture of the Huarochirí culture in this thesis, as explained above. I had to combine the information from the manuscript with information drawn from secondary literature about the circumstances of the manuscripts creation and the political, social and economic circumstances at the time. A suitable theory needed to be broad enough to cover all relevant data. Such a broad and also comprehensive theory was presented by Jürgen Osterhammel.⁶⁷

His theory illuminates the connections between the colonialists and the colonized, with regard to areas of economy, occupation, resistance, society, indigenous culture and religion. Some of these areas are of minor importance for this thesis and of course, Osterhammel's statements about religious developments within colonies present a greater relevance. With the following few paragraphs I briefly describe his theory with emphasis on, for my thesis relevant components.

Colonialism theory a brief overview

Osterhammel's approach to colonialism begins with a historical overview and a differentiation between a variety of expansions in history. He mentioned:

⁶⁷ His book, *Colonialism*, was first published in German 1995, later translated into English and since then several times republished. The latest publication by C.H.Beck Verlag appeared in 2012.

1. Total migration of entire populations and societies.
2. Mass individual migration.
3. Border colonization.
4. Overseas settlement colonization.
5. Empire building wars of conquest.
6. Construction of naval networks⁶⁸

The Spanish expansion into South America is classified under the title *Empire building wars of conquest*. A further classification brought forward by Osterhammel describes the different types of colonies.

1. Exploitation colonies.
2. Maritime enclaves.
3. Settlement colonies.⁶⁹

The Spanish South American colonies are classified under the first category, *exploitation colonies*. Characteristics for such colonies are:

- They are often a consequence of conquest with military means, after a period of contact without land claims.
- Their purpose is to exploit the conquered area, with help of tribute, taxation, and the use of natural resources. They should also enhance the national prestige and securing imperial politics.
- Generally, they have a low number of colonists, which after serving as soldiers, bureaucrats or businessmen returning to their home country.
- They often are controlled by the mother country with a governor system.⁷⁰

Although, many theoretical features described in the book can be recognized in the writings concerned with Latin American history⁷¹, Osterhammel gives the Iberian South American colonies a somewhat special status. While the segregation between Europeans and natives was maintained in most colonies; in the Latin American case, the European minority began to mix

⁶⁸ Osterhammel, Colonialism, 4-9.

⁶⁹ Osterhammel, Colonialism, 10,11,12

⁷⁰ Osterhammel, Colonialism, 10,11.

⁷¹ I mentioned them in chapter 1.3.4.

with the natives and the group of creole or mestizo became later the political dominant social group in South America.⁷²

Having established an overview about the different types of expansions and colonies and their characteristics, Osterhammel elaborated on a definition of colonialism with the following result:

Colonialism is a relationship of domination between an indigenous (or forcibly imported) majority and a minority of foreign invaders. The fundamental decisions affecting the lives of the colonized people are made and implemented by the colonial rulers in pursuit of interests that are often defined in a distant metropolis. Rejecting cultural compromises with the colonized population, colonizers are convinced of their own superiority and of their ordained mandate to rule.⁷³

In the case of Huarochirí, as part of the Latin American colonies, the sentence: “Rejecting cultural compromises with the colonized population,...” has to be seen critical, because of the rise of the mestizo population and the inevitable mix of cultural expressions. Nonetheless, Osterhammel emphasizes the unique character of every single colony, due to differences in politics, native culture, colonial purposes and not at least the local climate and geographical peculiarities.⁷⁴ Therefore, I believe that his definition is sufficient enough to account for the South American and also for the Huarochirí colonial situation.

Osterhammel continues to describe the characteristics of colonial empires. Thereby he mentions also the downfall of the Spanish Empire, due to the independence of the Latin American States and the Spanish–American War in 1898.⁷⁵ With the examples of Belgium, Netherlands and the United States he named colonial powers which could not be called Empires, simply because of their limited geographical spreading and number of colonies. He then briefly but comprehensively describes the differences of colonialism and imperialism. According to Osterhammel, one of colonialism’s main characteristic is the idea to be superior and that one has a responsibility to care for the colonial subjects.⁷⁶ With regard to the Spanish colonies in Latin America, the belief of spreading the righteous religion, Christianity, was one of the official motivations and justifications for the Spanish colonial efforts.

On the other hand, imperialism seeks to control and manipulate as many foreign nations and countries as possible with the intention to secure national prosperity, safety and other

⁷² Osterhammel, *Colonialism*, 9.

⁷³ Osterhammel, *Colonialism*, 16,17.

⁷⁴ Osterhammel, *Colonialism*, 4, 51.

⁷⁶ Osterhammel, *Colonialism*, 22.

interests. “Imperialism presupposes the will and the ability of an imperial center to *define* as imperial its own national interests and enforce them worldwide in the anarchy of the international system.”⁷⁷

The next part in Osterhammel’s theory is more interesting for this thesis. Here he elaborates on the question, why the colonial powers were usually successful in their campaigns. According to him, the technical advantages were most certainly one reason, but as there are examples for campaign failures, (by e.g. French, English and Italian troops) it was not the only one. Other reasons for colonial success were the better organized colonialists and the lack of unity between the indigenous people. Yet another point and an important one for this thesis, is the manipulation of native symbols by the conquistadores,⁷⁸ which is recognizable in the manuscript as shown further down in the analysis. Osterhammel mentioned here the example Cortés, who brought down an Empire with just a couple of hundred soldiers.⁷⁹ The Aztecs were expecting “white gods” to come and Cortés and the Spanish exploited this expectation. He also emphasizes that very few other people were as badly prepared for the Europeans as the Americans were. However, the manipulation of symbols was a crucial point, especially in the Spanish colonies. With regard to religion Osterhammel states:

“... it was unique to have the church fully subordinated to secular power for the purposes of colonial politics. The clergy apparently became the most effective instrument of Spanish penetration of America.”⁸⁰

Karen Spalding also recognized this in her book, *Huarocharí: an Andean society under Inca and Spanish rule*.⁸¹ The (from me previously) briefly described actions of Francisco de Avila show how much power church officials in the Spanish colonies could have. Yet, while the manipulation of symbols and the power of church officials are recognizable in the manuscript, there are no clues which could confirm Osterhammel’s statements of a to secular powers subordinated church. For the purpose of this thesis, this fact is of minor importance. Of greater relevance is that Osterhammel recognizes the power of the church in the Spanish colonies, which is detectable in the manuscript and specified further down.

During the campaigns as well as during the following colonial period, in most cases, without the help of indigenous people, any colonial success would have needed a larger

⁸¹ Spalding, *Huarocharí: an Andean society*, 245.

amount of soldiers and civil servants. To administrate India (a land with approximately 340 million residents at the time), England had 12000 civil servants on the ground; a ratio of 1: 28000. In French West Africa it was 1:27000 and in Nigeria 1: 54000.⁸² Hence, Osterhammel put forward indigenous collaboration as one of five factors that supported colonial ruling; these are:

1) the threat and employment of force by colonial security forces; 2) the adoption of traditional roles and symbols by the highest representatives of the colonial state; 3) “communication imperialism”: the systematic collection, processing, and dissemination of information about the colonized society by centralized institutions; 4) a calculated strategy of “divide and conquer”; and 5) an aspiration for the continued existence of the colonial system on the part of influential segments of the colonial society. This interest was nurtured by the colonial power, and constituted a prerequisite for “collaboration.”⁸³

Collaboration was an important factor in colonial efforts but it seldom resulted in a cultural cocktail. South America is the exception to the rule. In Africa and Asia, colonial societies were separated into the European ruler societies and the colonized indigenous societies.⁸⁴ Osterhammel sees the reason for this segregation partly in Christian moral education but also in practical considerations of power preservation. As a result, with decolonization the “white men” could just vanish, leaving only architecture behind. There are of course differences. In colonies with farming settlers, decolonization was often violent; because their prime value was something they couldn’t take home, land.⁸⁵

However, even in colonies where European culture was mixed with native cultures, according to Osterhammel, “...hardly ever did Europeans convert to non-Christian religions of their own accord.”⁸⁶

When it comes to change of cultural expressions and behaviors (as e.g. values, traditions and religion) within native societies, the colonial state influenced these societies to a great deal but this influence “seldom led to a complete collapse of pre-colonial cosmologies and ways of life, but always to its “destructuring” into fragments or at least to a challenging of cultural values previously taken for granted.”⁸⁷ Osterhammel mentioned here also the importance of colonialism as part of the phenomenon westernization. However, colonial interference into indigenous societies varied in degrees of intensity. As the least influential

colonial power, the Dutch are named and their behavior in Indonesia. "...the Dutch went about their business without mingling in their cultural environment."⁸⁸ The Spanish example stands for the opposite, for "an energetic politics of westernization as far back as the sixteenth century."⁸⁹ In much the same way religion, as an important part of most cultures, was also but not always targeted with different intensity by the colonialists. Thereby the Church organizations were sometimes used to support colonial efforts and sometimes they were excluded from the official colonial politics. While the English East India Company pursued a strict non-intervention politics with regard to religion until 1813, the Spanish used the Catholic Church as "a powerful instrument of cultural penetration."⁹⁰ For the Dutch on the other hand, it was more important to preserve and secure the faith of the colonists.

One important statement of Osterhammel stressed that "Never did imported "modernity" and local "tradition" merely clash or co-exist. Instead, new blends evolved."⁹¹ Osterhammel mentioned four possible reactions or results to colonial efforts targeting indigenous religious traditions. Syncretism was one possible outcome, as for example in Mexico or the Philippines. Second, in some African examples, the Christian missionary efforts led to the rise of African churches, which were independent of the missionaries and an important "inspiration of decolonization."⁹² A third result could have been a "Stimulation of non-Christian countermovements."⁹³ In these cases, native religious tradition was used to confront Christian and colonial efforts. During the process, original traditions could change and adapted to the new political situations. A prominent example is the term Hinduism and what it symbolizes. It was unknown to pre-colonial India and a result of colonization.

The last result or reaction named by Osterhammel is the "Assertion or strengthening of the existing order."⁹⁴ He used the Islam as a prime example. He argues that Islam differed from other religions, because of its history of the struggle with Christianity, its large propagation, and its apparent immunity towards Christianization efforts. This statement by Osterhammel presents a critical aspect. It contradicts his previous statement: "Never did imported "modernity" and local "tradition" merely clash or co-exist. Instead, new blends evolved."⁹⁵

Not to mention the fact that there is not just one Islamic religion, but many. Still, his arguments are logical and comprehensible. Islam, even though it didn't "blend", was surely influenced by colonialism, as Osterhammel recognized. Its resistance led to a strengthening of this religion in many places.⁹⁶

The "blend" argument should maybe transform into an "influence" argument. Where two cultures meet, they influence each other. However, the huge field of colonialism, which Osterhammel seeks to theoretically describe, appears to be elusive when it comes to details. But he understood that and made it clear in the beginning of his book.

Colonial reality was multifaceted and often failed to conform to arrogant imperial strategies. It was shaped by particular local features overseas, by the intentions and opportunities of the individual colonial powers, and by broader tendencies in the international system. ... Even if we simplify the matter by following the conventional equation of colonialism and (European) colonial politics ... the multiformity of colonial situations continues to confound efforts to define colonialism.⁹⁷

Yet to my understanding, Osterhammel created a theoretical structure of colonialism which has the ability to enrich my own research efforts. It provides valuable features that help to understand the situation of the indigenous people in Huarochirí in 17th century and their colonial masters. Combined, Osterhammel's theory, the secondary literature and the information from the manuscript, should produce research results which can be placed in the broader picture of colonialism and at the same time, create new knowledge about the particular situation in Huarochirí.

2 Analysis

The following analysis begins with the search for information about afterlife conceptions in the manuscript and possible connections to described behavior or rituals. At first I scrutinize the myth texts and later the ritual descriptions in search for any statements, explicit or implicit, relevant for this topic. In the second part, I elaborate with help of the ritual texts a picture of religious obligations and freedoms for the people in the Huarochirí society. With regard to this Christian influence, the following part deals with the Christian behavior in Huarochirí in 16th and 17th century. Hence this behavior affected most religious expressions of the period in question; it has significance for my analysis and for the concluding chapter.

2.1 The Christian Case

Karen Spalding describes in her book *Huarochirí, An Andean Society Under Inca and Spanish Rule*⁹⁸, how the Catholic Church systematically pursued the extinction of Andean belief. Beginning shortly after the Spanish invasion, which was according to history writing already accompanied by Christian priests,⁹⁹ she gives an overview about organization and structure of this attack on religious beliefs and social life in Huarochirí.

When the Inca Atahualpa received the Spanish and Pizarro, the first thing he had to listen to was the speech of the Dominican Vicente de Valverde.¹⁰⁰ He demanded the recognition of the Christian faith and his submission to the Pope and the King of Spain. It is not clear which exact words he used and if he held a bible or another book or paper in his hand, whatever the case and whatever the reaction was, the day ended with hundreds of native corpses and with

the imprisonment of the Inca Atahualpa and marked the beginning of Catholic Christian rule in the Andes.¹⁰¹

Spalding wrote that the Archbishop in Lima, Gerónimo de Loayza in the 1540s “issued the first Instrucción to guide the priests assigned to Andean communities in the conversion of the Inians to Catholicism.”¹⁰² They should involve the natives in destructing the huacas in order to convert them to the Christian faith. In 1551 the first Conciliar Council of Lima took place which ended with nothing less than the declaration of war against the native belief and rituals regarding their ancestors. The natives should be convinced that the huacas in reality were evil forces and any ancestral power came from a pact with the devil. During this “war”, the church burned mummies and huacas alike. The priests tried to convince the Indians that their ancestors burn in hell for all eternity, for their alliance with the devil.¹⁰³

An example for reinterpretation can be found in the Huarochirí Manuscript. It is a story of a man called Don Christóbal Choque Casa. Chapter 20 and 21 describe how he encountered the huaca Llocllay Huancupa and with the help of his Christian belief defeated him. The concept of the huaca is reinterpreted and understood as an evil spirit, a demon and the “good Christian” Don Christóbal proved (so the reader of the manuscript is told) the strength of the Christian religion.¹⁰⁴ The story ends with a warning in form of a quotation:

“Last night, with the help of the Virgin Saint Mary our mother, I conquered him¹⁰⁵ for good. From now on, none of you are to enter that house.¹⁰⁶ If I ever see anybody enter or approach the house, I’ll tell the padre. Consider carefully what I’ve said and receive it into your hearts completely!” Thus he admonished all the people.¹⁰⁷

Interesting here is that this story is not from a distant past, the author of the manuscript wrote “The deceased man’s son, that is, the same Don Christóbal we spoke of, is still alive.”¹⁰⁸ The purpose of the story is clear, to convince the natives that the huacas are evil demons and that the Christian faith has the power to defeat them. The narrative analysis reveals the linguistic which manipulates the readers’ opinion. There are the terms “Virgin Saint Mary” and “our mother” which can be seen as positive agents while the opposite site is portrayed with negative agents:

...the shameless wicked demon shook the house and, calling “Chus!” in a very deep voice, went out of it in the form of a barn owl. /.../ There were no longer any terrors, nothing like a man entering and leaving the room.¹⁰⁹

Osterhammel’s described the manipulation of religious symbols in his book.¹¹⁰ By changing the indigenous understanding of huacas and mummies, the Spanish created a religious vacuum which had to be filled. They promised the natives the almighty Christian god which could have helped them to overcome misery and misfortune. But the key to the Christian faith and thus to the Christian god was in the hand of the Spanish. Hence, through manipulation of religious symbols, the Spanish for themselves created power over the natives.

During the 1560s, when the conquistadores still raided and plundered the land, a resistance against the church promoted belief was formed. A movement called Taki Onqoy spread across the Andes and revitalized old huaca belief. Since it presented a danger for the Spanish occupiers and an end of their way of life, the church received full support from the secular Spanish forces in the Andes and by 1572 the movement was destroyed. Not by the means of convincing speeches and letters, but with violence against possible members of the leadership.¹¹¹ The notion of the creation of a countermovement, (in this case against the implemented Christian faith and thereby the Spanish occupation) is also an element in Osterhammel’s theory. Countermovements were based on pre-colonial religious traditions; they often transformed or adapted to the new situation and intended to overcome the colonial rule and the extinction of traditional beliefs and values.¹¹²

Another tactic conducted by the Spanish was to denigrate and malign the Inca realm. Through investigations information was gathered and then reorganized and bended. The result was a picture of the Inca rule as tyranny which enslaved its people; whereby Inca accomplishments in architecture, e.g. bridges and roads, were presented as evidence for massive slave labor. Another evidence for the tyranny was the Inca rejection of the catholic faith, which also justified the invasion and destruction of the Inca state by the Spanish.¹¹³

The most important role in the process of colonizing the Andes had the priests. Their task was to watch over their parish, to ensure the full conversion to Christianity and also the acceptance of the new social system, in which the natives were exploited and the Spanish

were the profiteers. The priests conducted questionings with the focus on The Ten Commandments. They were used to prevent people from revolting. “Thou shalt not steal” e.g. was actually saying: don’t take from the one who has more (the Spanish), while the Spanish had the right to take what they wanted, because it was in the name of the lord.¹¹⁴

And again, Spalding’s descriptions echo in the statements of Osterhammel. With regard to the Spanish Latin American colonies, he called the Catholic Church “a powerful instrument of cultural penetration”¹¹⁵.

This minor overview should provide a better understanding for the later descriptions in this thesis of native people, who hid their traditional belief and rituals.

2.2 Life and Afterlife

Within Abrahamic religious thought, a person’s behavior during his or her lifetime is rewarded or punished in the afterlife, and in most Indic religions behavior and actions determine the quality of the next life and its circumstances. For any believer, these are strong motivations to follow given religious moral rules. How did the people in Huarochirí thought about life after death? What does the manuscript tell us about thoughts of reward and punishment after death; about the life-death connection? At first I concentrate on the myth descriptions which include stories about an ancient mythological time, when supreme huacas were creating the Andean world as it was then, during 16th and 17th century; they further include myth stories about the Inca Empire and also comments on contemporary behavior and belief in 16th and 17th century. Possible Christian comments about heaven and hell conceptions and their like are ignored in this section. However, Christian priests influenced religious behavior of the people which is detectable in the manuscript and such information is naturally included in this research.

¹¹⁴ Spalding, *Huarochirí: an Andean society*, 250, 251.

¹¹⁵ Described above in the chapter Colonialism Theory, 22-28.

2.2.1 Myth Texts

Chapter 1

In the first chapter a myth is told about “very ancient times”¹¹⁶ when two huacas named, Yana Ñamca and Tuta Ñamca, were defeated by a huaca called Huallallo Caruincho. The word Ñamca is interpreted by Salomon and Urioste as a certain type of huaca and the words Yana and Tuta translated as Black and Night. Therefore, this myth points at the time before the present world, or the present world in 1600 when the myth was told. With the appearance of Huallallo Caruincho, people would come back to life after exactly five days after their death. Because of their return, the region was overpopulated and life was very hard due to food shortages. The story continues with “Later, at the time when another *huaca* named Paria Caca appeared...”¹¹⁷ this misery stopped. In chapter 27, we find a description of why people would stop coming back; I will describe it further down. But this first chapter reveals the idea that a certain aspect of a person continues to act after death and the question is now, what aspect is it and where is it going?

Chapter 5,6

In chapter five we encounter a surely not common way of dying and the following afterlife. The son of Paria Caca a man called Huatya Curi punished a woman by turning her upside down and into stone. All passing people should see her vagina.¹¹⁸ Now, the woman is clearly deprived of her human life but the intention of Huatya Curi was to punish her not just with death. Some aspect of her survived and as we are told later in the text, people offered coca to her when they were about to undertake something difficult. This suggests that people could turn into superhuman beings; here due to the influence of another superhuman being. But in chapter six, a woman called Chuqui Suso turned herself into stone after she had sex with Paria Caca.¹¹⁹ In the next chapter we learn that people worshiped Chuqui Suso still at the time of the manuscript’s creation.¹²⁰

The described examples have similar outcomes as both women turned into stone and were still worshiped in 17th century. We can assume that not everyone died in this way or was

¹¹⁶ Salomon and Urioste, *Huarochirí Manuscript*, 43.

¹¹⁷ Salomon and Urioste, *Huarochirí Manuscript*, 44.

¹¹⁸ Salomon and Urioste, *Huarochirí Manuscript*, 59.

¹¹⁹ Salomon and Urioste, *Huarochirí Manuscript*, 62.

¹²⁰ Salomon and Urioste, *Huarochirí Manuscript*, 65.

worshiped afterwards. However, even in these myths the afterlife existence is implied. Another interesting point is that, these women didn't ask for being turned into stone, nor had they any intentions to become villcas and therefore preparing themselves with rituals or traditions during their lifetime. To compare it with a Christian saint who lived according to the Christian god's rule, a pure life, or acted in certain ways that earned him the saint status; there is no indication in the text that the women acted in special ways and one of them was even punished.

Chapter 14

Chapter 14 gives another clue about life and afterlife thoughts of the Andean people. It is a description of an event taking place in the last days of the Inca Empire and involves the Inca Huayna Capac and the god Cuni Raya Vira Cocha. The god ordered the Inca to send someone "to Ura Ticsi, the world's lower foundations."¹²¹ The translation, lower foundations, is discussed by Salomon and could mean the underside of the world or lowlands. Also not clear is another part of this story. When the Inca had ordered Shamans to come, the next paragraph starts with: "He instructed them, "Go to the world's lower foundations. Then tell my father, 'Your son sent me here. Send me back bearing one of his sisters.'""¹²² The Inca could send for one of his sisters and so could the god Cuni Raya Vira Cocha. Salomon connects a later paragraph to this statement and concludes, not with absolute certainty, that the god Cuni Raya is probably the one who sends for his sister. On the other hand, the Inca's father, Tupac Yupanqui, was not alive when the son was ruling and it could also be him, who the Shamans should ask for the sister.¹²³ Whether or not the Inca or the god sent someone into the lowlands or underside of the world, this chapter gives proof to the concept of another world behind, beyond or under the world of the humans. The Incas were worshiped and presented as gods too¹²⁴, it is therefore not possible to conclude that "normal" human beings had access to these places and possibly were looking forward to come there after death. However, the concept of such a place was known to the Huarochirí people as they told the story.

¹²¹ Salomon and Urioste, *Huarochirí Manuscript*, 88.

¹²² Salomon and Urioste, *Huarochirí Manuscript*, 89.

¹²³ Prem, *Geschichte*, 74.

¹²⁴ Prem, *Geschichte*, 76.

Chapter 25, 30

Another human turned into stone in chapter 25. This time it's a man who after serving a god, who was dressed as a beggar, beer and coca, was frozen to stone.¹²⁵ Like the women above, after turning into stone he too was then worshiped by the people as a huaca. He or the huaca-stone was destroyed later by the priest Avila. However, until this destruction, people expected him to influence their life positively in return for their offerings. And so they did in the next example in chapter 30. After discussing the water distribution of a spring the man Anchi Cara and the woman Huayllama fell in love and decided to stay forever together and then turned into stone. They too were worshiped until the times of the manuscripts creation.¹²⁶ There are more such stone-turning examples in the text. This seems to be a very common notion or idea in Andean religion. As all of them were worshiped as villcas or huacas I will discuss them further down as a phenomenon or expression of Andean belief, separate from the preconceptions about "normal" human afterlife.

Chapter 27

In chapter 1, we are told about people, who would come back after five days of death and that with the appearance of Paria Caca, this stopped. Chapter 27 describes the reason, why people stopped coming back. I believe that it provides key elements which can help us to understand parts of the afterlife concepts of the described Andean culture. At the same time, the text shows influences of Spanish terms which calls for special attention and careful analysis. In order to facilitate the understanding for the reader, I cite here a large part of the myth.

In very ancient times, they say, when a person died, people laid the body out until five days had gone by.

The dead person's spirit, which is the size of a fly, would fly away, saying, "Sio!"

When it flew away, people said, "Now he's going away to see Paria Caca, our maker and our sustainer."¹²⁷

After a short paragraph which discusses whether the dead would go to Paria Caca or Yauri Llanca, the story continues with:

The dead used to come back after five days. When they were about to return, people waited for them with prepared food and drinks.

¹²⁵ Salomon and Urioste, *Huarochirí Manuscript*, 125.

¹²⁶ Salomon and Urioste, *Huarochirí Manuscript*, 134.

¹²⁷ Salomon and Urioste, *Huarochirí Manuscript*, 129.

When the dead arrived, they'd just say, "I'm back!" and rejoiced immensely in the company of their elders and their brothers.

They'd say, "Now I'll never die again forever!"¹²⁸

The next two paragraphs tell about the misery people were living in, due to overpopulation, and that one man didn't come back in time. His family got angry with him when he arrived first on the sixth day. The following paragraph describes the action of his wife and the consequences.

In her spite the dead man's wife hurled a maize cob at his arriving spirit.

The moment she threw it, he made a "Sio!" noise and went back where he'd come from.

Since that time, not a single dead person has ever come back.¹²⁹

The term for spirit in the original text is *animanri* which is derived from the Spanish word *anima*. Therefore, even though as Europeans we have an understanding of what a spirit could be, I cannot interpret the word in the same way, as I would do when it appears in a Western European context. However, there is a description of this concept. It has the size of a fly and makes "Sio!" when flying away. Salomon takes the possibility into account that it could refer to the Quechua term *upani*, which describes a "light, dry, volatile being that contains the vital essence of a person."¹³⁰ That would certainly match the description of this spirit in the myth. It flew away to Paria Caca or in other stories to Yauri Llanca. Unfortunately, there is no description of what happen at Paria Caca or Yauri Llanca's place. With the thrown maize cob, the time of the returning dead stops and the spirits or the human essence would stay at a god's place.

These are the myths telling stories related to death and afterlife. To summarize the main notions:

- People would come back after five days, in the old days.
- They would go to Paria Caca or Yauri Llanca and then return.
- The concept of the human essence is seen as a fly like object in size and makes a "Sio!" noise.
- After one spirit went back to the god, due to his angry wife, the dead stopped coming back forever.
- For gods or Incas or both, there is a concept of an underworld.

¹²⁸ Salomon and Urioste, *Huarochirí Manuscript*, 129.

¹²⁹ Salomon and Urioste, *Huarochirí Manuscript*, 129.

¹³⁰ Salomon and Urioste, *Huarochirí Manuscript*, 129.

- People turned into stone, for different reasons and were worshiped afterwards.

2.2.2 Ritual Texts

Chapter 9

The first ritual dealing with the afterlife is described in chapter 9. In connection with an annually Paria Caca worship, people who had lost a member of their family during the year would stay up in the night before the worship and wail and say: “Tomorrow we’ll go and see our dead by Paria Caca’s side!”¹³¹ They also said: “Tomorrow is the day when we’ll deliver them there.”¹³² They offered food to the deceased in that night and prepared their ingredients for the rituals. Then they said: “Now I deliver them to Paria Caca forever. They will never come back any more.”¹³³ The following ritual is the sacrifice of a small llama or coca bags. The yancas would then examine the innards of the llama.

If the signs were favorable, the yanca would prophecy, “Everything is well.” If not, he’d say, “It’s bad. You’ve incurred a fault. Your dead relative has angered Paria Caca. Ask forgiveness for this transgression, lest that fault be charged to you as well.”¹³⁴

This description reveals two major aspects of the life afterlife connection. One is the already mentioned notion in the myth description, that there is an aspect that survives the death of a person and goes somewhere and even has the possibility to come back.¹³⁵ We know now that people thought that the deceased is going to Paria Caca. The rituals could be understood as necessary to deliver him or her to the god. People also seem to fear that the deceased would come back which made the rituals even more important, it also presents a certain power of the living over the afterlife. The second aspect is the legacy of the dead. When he had committed any kinds of faults and angered the gods, this would not only affect the deceased somehow, but also the living relatives, who had to expiate and apologize for this transgression. “...lest that fault be charged to you as well.”¹³⁶

¹³¹ Salomon and Urioste, *Huarochirí Manuscript*, 73.

¹³² Salomon and Urioste, *Huarochirí Manuscript*, 73.

¹³³ Salomon and Urioste, *Huarochirí Manuscript*, 73.

¹³⁴ Salomon and Urioste, *Huarochirí Manuscript*, 74.

¹³⁵ This last thought is possible related to the information in the first chapter.

¹³⁶ Salomon and Urioste, *Huarochirí Manuscript*, 74.

Chapter 24

Another concept is described in chapter 24. When people captured a warrior, according to the myth, they would flay his face and make a mask, a so called huayo, out of his skin and bones. The huayo was then used in a dance and hang up the following day together with offerings. People said about this: “The huayos will return to the place where they were born, the place called Uma Pacha, carrying these things along with them.”¹³⁷ A prisoner of war was aware of these things and would say:

Brother, soon you’ll kill me. I was a really powerful man, and now you’re about to make a huayo out of me. So before I go out onto the plaza, you should feed me well and serve me drinks first.¹³⁸

Again, as for the women who turned into stone and became villcas, or as described in the ritual above connected to the Paria Caca ritual, it is believed that some aspects of a human move on after life. But this time the death is caused by humans and through ritual action the afterlife of the warrior is influenced. Furthermore, the huayo should go where it was born, a “place called Uma Pacha”¹³⁹. This part is puzzling since two paragraphs later a man is described who was known as Uma Pacha who turned into stone. Salomon has two different interpretations for this name. The first understands Uma Pacha as a huaca, but the second interpretation associates the name with high mountain lakes, “... seemingly imagined as sources at which biological vitality is renewed.”¹⁴⁰ It is tempting to interpret the second alternative as some kind of heaven to which the soul returns. However, this would be a very Christian conception, and so far I have not found a single hint about any heaven conceptions in the manuscript. It does say that something is going back to where it was born, which is the important clue in this description together with the information about people’s ability to influence the afterlife of a human.

Chapter 28

Chapter 28 describes a ritual which also contains a good example for the transition period. It describes how a woman after the death of a family member would wait until the first maggots would leave the corps, pick them up and bring them home. They were seen as the dead spirit or soul of the deceased. The people would feed them, wailing and dancing and afterwards

¹³⁷ Salomon and Urioste, *Huarochirí Manuscript*, 120.

¹³⁸ Salomon and Urioste, *Huarochirí Manuscript*, 121.

¹³⁹ Salomon and Urioste, *Huarochirí Manuscript*, 121.

¹⁴⁰ Salomon and Urioste, *Huarochirí Manuscript*, 121.

bring the maggots “... out into the street, saying, ”You go back now. It’s not time for us to die yet.””¹⁴¹ Salomon describes the pre-Columbian Andean tradition of keeping the dead conserved in houses or caves. They were fed and dressed as if they would be alive.¹⁴² This is also mentioned in chapter 11, by the author of the manuscript.¹⁴³ When the priest ordered Christian burial, people thought that the dead were starving, because they could not be fed anymore. The manuscript continues to describe the present (early 17th century) tradition to lay cooked food and drinks alongside the churches on All Saints’ Day. This shows that the idea of the dead eating and drinking was still present during Avila’s days. For Salomon the ritual described in chapter 28, was probably to “... mitigate anguish about burial.”¹⁴⁴ It also confirms Osterhammel who stated that colonialism “seldom led to a complete collapse of pre-colonial cosmologies and ways of life ...”¹⁴⁵ Instead, as one of four possible reactions to colonialism; he describes the notion of syncretism. Syncretism in the broadest sense is a blending of religious ideas, which is clearly recognizable in this part of the manuscript.

But it creates also another question. When the dead were served as if they would be alive long after they had died what about the spirit concept and the ritual in connection to the Paria Caca ritual? I will discuss it further down.

These are the descriptions of rituals connected to afterlife conceptions. The most significant notions are:

- During Paria Caca worship, people would conduct rituals to send their dead to Paria Caca.
- If the signs revealed faults of the deceased produced during his or her lifetime, they had to be corrected by the living through other rituals.
- These faults could also influence the life of the relatives negatively.
- People could turn other people into objects with supernatural attributes, the huayo-mask.
- These “spirits” were thought to go back to where they were born, Uma Pacha.
- A later ritual describes how women collected maggots and how they were fed as if they would be the deceased.

2.2.3 Summary

What does the myth and ritual descriptions reveal about afterlife ideas and what can be assumed effects for the lives of the people in Huarochirí?

To phrase this question in a simple way: what is the connection between life and afterlife? Obvious connections of afterlife ideas and life are the described rituals. But what more can be revealed with help of the manuscript? In the following lines I combined the obtained information about rituals and myths in order to answer the questions.

Stone Huacas - Based in the myth texts I would separate the stories about the human who turned into stone from the other stories. Although they reflect the belief that human aspects could survive a transformation into stone and furthermore obtain superhuman abilities, it does present the exception to the rule in many ways. These are descriptions of huacas or villcas, superhuman entities which we might call gods or spirits. As such, even though they have human origins in these stories, they rather constitute characteristics of these huacas and villcas, and not of humans. I will not ignore or exclude the overarching idea of a life after death in these myths; it will have a place in the later discussion. However, all other aspects of these stories are rather placed within a research about superhuman beings in Andean religion.

The Spirit - The story about deceased humans who came back after five days and thus overpopulated the region provides a much more significant clue to afterlife conceptions. Despite differences in these stories, whether the dead would go to Paria Caca or to another deity, an aspect of the deceased went away to a huaca. With the story about the angry wife, who threw a maize cob at her returning husband, the dead stopped coming back. It also tells us that the “spirit” is a fly like object which makes a “Sio!” noise. This conception is also part of a ritual description. We can recognize it in the ritual conducted by a female relative to a deceased. She would pick up small maggots and bring them home as if it would be the spirit of the deceased.

During the Paria Caca ritual season, people would also bring food and drinks for their dead. They thought that the dead would go to Paria Caca and that they had to send him or her off by conducting rituals. This ritual story has similarities to the myth about the returning dead. Here too, the dead is thought to go to a deity. The story also implies a certain fear that the dead would come back; a reminder of the myth about the old days. The ritual description about the huayo-mask contains also the belief that the spirit or some aspect of a warrior is going

somewhere. Here too, the deceased or in this case the killed man is fed. The significant differences are that, the (by ritual action) killed man is transformed into an object with supernatural powers and his spirit would go back to Uma Pacha, a place where he was born, according to the description. This Uma Pacha could be a place or a huaca.

Conserved Dead - It seems that there are two main conceptions which seemingly contradict each other. One is the fly like object (maybe the human essence or spirit) which is going to a deity or place where it was born; the other one is that the physical remains of the dead still contain some form of life, which has to be fed and dressed. Myth and ritual descriptions support both conceptions. We can presuppose that there were variation between the ideas, due to distances of settlements and ayllus to which people belonged. However, Salomon tells us that it was Andean tradition to feed the dead and to keep them in caves or special houses, which is also mentioned by the author of the manuscript. Hence, this behavior applies for the majority and not just for some ayllus. Another uniting factor was the annual Paria Caca festival or worship, in which the majority of the Huarochirí people participated. Hence the conception of the human essence, going to the deity was also widely known. Another indicator for this is the myth about the old days, when the dead would disappear for five days and then came back. It was an old myth which shows similarities to the other myths and rituals. Even when the exact place (e.g. Paria Caca, Uma Pacha, and Yauri Llanca) is debated, some aspect of the human is going somewhere. Furthermore, the differences can be explained by the different ayllus, which are described in the chapters 8, 9, 24 and 31.¹⁴⁶ These ayllus have different founders in their creation myths and it is probably therefore that the dead are going to different huacas or places.

Christian Influence - There is no clue in the manuscript which could illuminate this contradiction between conserved dead and spirit like conceptions. We have to work with both ideas in creating a picture of Huarochirí society. One of these conceptions was clearly compatible with Christian notions of the soul; which is going somewhere after the physical death. The other one clearly presents a problem for the native people. As they were forced to bury their dead for the first time, they could no longer be fed and people feared they would starve and had a miserable afterlife or even got angry. Feeding the dead was an important aspect as they also fed them during the Paria Caca worship. The consequence was a ritual which, according to Salomon and I agree with him, was conducted in order to relieve the

¹⁴⁶ Salomon and Urioste, *Huarochirí Manuscript*, 117, 136.

living from their anxieties. In time, people considered the churches and connected burial places as sufficient enough, to leave food and drinks for the dead. I assume that this was done at first shortly after the burial of a relative, and later, with growing Christian power, on the All Saints' Day, to hide their non-Christian beliefs. It also confirms parts of Osterhammel's theory, in which he describes the notion of syncretism due to colonialism.

Chapter nine describes a ritual in which the priests detected faults of the deceased, which could be harmful for the dead and the living relatives. The concept of the Christian sin could be explained to the natives by referring to the theoretical aspect of the ritual. However, important is the idea, that one could attract punishment in the afterlife by breaking certain rules in the lifetime. This is often a good motivation to follow religious rules, when the religion contains the idea of an afterlife plus included punishment for transgressions.

Summarized, life in Huarochirí was influenced by three major concepts related to death:

1. Conducting the correct rituals to send one aspect of the dead to a supposed final destination;
2. taking care of the physical aspect of the dead by feeding and conserving them;
3. living according to the religious rules to omit punishment for oneself in the afterlife and for the relatives.

The first two points required resources. As described, people had to offer certain things, according to their abilities. Especially the second point meant making a repeated effort at certain times in a year. The physical aspects of the dead were regularly presented in the society and had to be taken care of. The third point is similar to other religions. Behave in this life, so you won't get in trouble in the next. Unfortunately, there is no description of transgressions which counted as serious faults, something that would have consequences after death.

A last element in this inquiry has to be mentioned. The Christian influence had already changed religious behavior of the natives to a great extent; it will be closer discussed in the next part. Yet, with the knowledge about these stories and rituals, people in Huarochirí were still conscious about the described aspects of afterlife ideas. The continuous preparation of food for the dead is an evidence for ongoing belief in these ideas. That these prepared offerings were now placed on churches supports the theory of Osterhammel. Syncretism was

one of four possible reactions to colonialism and cultural encounters.¹⁴⁷ I assume that afterlife concepts are amongst the last religious aspects that change due to certain circumstances, since they are very essential to most religions. As it will be pointed out and discussed in greater detail further down, people in Huarochirí were not simultaneously converting to the new belief nor were they simultaneously refusing it. Most people lived in between both religions. Given the importance of the afterlife concepts, they were amongst the last that changed and therefore were still prominent to most in this transition society.

2.3 Worship Freedom and Obligation

Some obligations are already discussed in the previous chapter, now I will search for further obligations and also freedoms recognizable in the text. In order to do so I need another criterion within this content analysis; this is the purpose and schedule of a ritual. Whenever a ritual was conducted in order to pursue a certain private goal, the act is classified by me as a sign of personal freedom when it also was outside of any possible religious schedules; i.e. when a person decided to do it on her own. To understand what sustained an obligation in worship it is necessary to explain the term itself and what an obligation could be in the Andean context.¹⁴⁸

2.3.1 Obligation

At this point I want to explain, what I mean with obligations in the essay's context. The Oxford Dictionary gives a definition of the term obligation which mirrors my understanding and therefore is here repeated:

1. An act or course of action to which a person is morally or legally bound; a duty or commitment"
2. "The condition of being morally or legally bound to do something"
3. "A debt of gratitude for a service or favour"
4. "A binding agreement committing a person to a payment or other action"¹⁴⁹

¹⁴⁷ Described above in the chapter Colonialism Theory, 22-28.

¹⁴⁸ As some descriptions reveal information about men or women involvements during rituals and others don't, I will not try to evaluate the general gender relationship in Huarochirí. For ritual descriptions with specific information about gender roles, I will make some statements but won't use them for a generalized picture of this religious culture.

¹⁴⁹ www.oxforddictionaries.com. Accessed April 28, 2014.
<http://www.oxforddictionaries.com/definition/english/obligation>.

Two aspects in this definition are important to highlight. The first one is the expression “morally or legally bound”. Transgressions of moral rules and laws are followed by consequences, if they are detected. There might be minor consequences as e.g. a disappointed, sad relative, but they can also be major ones, as e.g. severe punishment up till death penalty. Therefore, obligations imply consequences, when disregarded. The second aspect is “A debt of gratitude for a service or favor”. This is the attribute of the Andean and Inca society par excellence, reciprocity, and therefore has to be explained in more detail.

2.3.1.1 Reciprocity

Maria Rostworowski de Diez Canseco¹⁵⁰ described in her book the system of reciprocity in the Inca and Andean cultures. She feels obligated not to use the word empire in connection with the word Inca, because in many ways the realm of the Incas is utterly different from our Western European understanding of the term empire. One reason for this is the system of reciprocity. The Inca (ruler) had no absolute power and was bound to give his fellow allies gifts and presents which represented roughly the same value as the requests of the Inca. He asked the other Andean lords e.g. for soldiers, which he needed to defend his realm and to occupy the next lordship or area. He also needed worker for mining, agricultural activities and the building of state roads, which are amongst the few similarities to the classical empires, like the Roman or the Mongol Empire. For all these requests he had to pay with gifts, and the alliances were renewed annually; which was in the end, due to the expanding empire and the constant rising of costs for organizing and ruling, a factor for the decline of this power in the Andean world.¹⁵¹

Yet, the system of reciprocity was not a characteristic bound only to the Inca ruler and upper classes in Andean society. Even between and in the ayllos, reciprocity was reality.¹⁵² A favor for a favor, even between families and this system did not end there. Religious sacrifice described throughout the manuscript shows this pattern of reciprocity. People offered and expected something in return.¹⁵³

¹⁵² Rostworowski de Diez Canseco, *History of the Inca*, 36-47.

¹⁵³ Salomon and Urioste, *Huarochirí Manuscript*, e.g. 71, 116, 135.

2.3.1.2 Obligation and Consequences

When ignored, obligations promise consequences. In the Huarochirí manuscript, I found several examples for what believing people expected by transgressions or unfulfilled religious obligations. In chapter 13 the worshiper would ask the huacas, when someone of his kinship got sick:

Oh llacsa Huato, Mira Huato, it is you who make people;
It is you indeed who know my sin, better even than Chaupi Ñamca.
Tell me, I beg: what have I done to make them ill?
For what fault of mine do I live in suffering?¹⁵⁴

These lines clearly reveal the thoughts of the believer; because of his sin, a beloved family member got ill. I will come back to this example further down, because the same chapter provides evidence for personal freedom in worship.

I also mentioned another clue in the chapter above (afterlife). On Paria Caca worship festival, people would feed their deceased relatives and offered a llama to the priests, who would scrutinize the innards of the animal in search for any signs of sins. Identified sins or faults would have to be corrected by the family by conducting special rituals. In chapter 20¹⁵⁵ of the manuscript I found a description of how people first stopped to worship their huacas due to Spanish Christian pressure and later started again after a great plague of measles swept the area. People associated the disease with the anger of the huaca Llocllay Huancupa; a punishment for denied worship obligations. In the same chapter, the author described how the people even before the Spanish invasion thought that Llocllay Huancupa was angry and disappeared because of insufficient worship. People reacted with even stronger worship efforts and the huaca returned. The descriptions in chapter 20 match the characteristics of the Taki Onqoy movement which I described above. The author of the manuscript doesn't mention this name but there is a striking resemblance between his story and the Taki Onqoy descriptions by Spalding.¹⁵⁶

In chapter 19¹⁵⁷ there is an example which also reveals the mindset of the people in Huarochirí. The child of Paria Caca Maca Uisa, which served the Inca and defeated his

¹⁵⁴ Salomon and Urioste, *Huarochirí Manuscript*, 85.

¹⁵⁵ Salomon and Urioste, *Huarochirí Manuscript*, 101-106.

¹⁵⁶ Spalding, *Huarochirí: an Andean society*, 246,247.

¹⁵⁷ Salomon and Urioste, *Huarochirí Manuscript*, 99.

enemies, was taken to Limca and worshiped there after the Spanish occupation. People in Limca became wealthy, up to the point that other people got envious of Limca and the curaca of another place Don Juan Puypu Tacma ordered the priest of Maca Uisa to bring him to Llacsa Tambo. People obviously connected the wealth with the huaca Maca Uisa.

These are examples which describe how people in Huarochirí connected wealth or despair with their worship of the huacas. It was the constant offering to the huacas and the returned favors which constituted the religious reciprocity, which resulted in non-negotiable obligations. A break of this circle of give and take was a serious matter and this is the first clue for answering the second question of the essay's aim.

2.3.2 Obligated worship

According to the manuscript, there were three great worship festivals in every given year; the already mentioned Paria Caca worship festival called Auquisna¹⁵⁸, the Chaupi Namca worship festival called Chaycasna¹⁵⁹, and the Tutay Quiri worship festival called Chanco¹⁶⁰. These festivals were mainly dedicated to the huacas but had also additional purposes, e.g. in connection with Chanco they also ask for rain¹⁶¹ and during the worship of Chaupi Namca they danced for a new fertile season¹⁶², and aside from Auquisna they took care of their dead, as described above. Even if I evaluate the participation in these worship festivals as obligated, the manuscript offers no hint as to what happen if people wouldn't participate. Of course, the religious mind could understand an absence from important annual rituals as dangerous, since this worship was about protection, rain, fertility and other life-sustaining elements. However, I cannot make a statement to any punishments, which would be another proof for a force behind worship obligations. Belief in divine punishment might be the only plausible explanation in this context, but it is also a very sufficient one.

As for the great festival worships, people were not just offering to a huaca, they were also wishing things for themselves. During Auquisna, they held a race to the worship place and the first who would arrive with his llama received special blessings and good predictions for the

¹⁵⁸ Salomon and Urioste, *Huarochirí Manuscript*, 72.

¹⁵⁹ Salomon and Urioste, *Huarochirí Manuscript*, 72.

¹⁶⁰ Salomon and Urioste, *Huarochirí Manuscript*, 78.

¹⁶¹ Salomon and Urioste, *Huarochirí Manuscript*, 80.

¹⁶² Salomon and Urioste, *Huarochirí Manuscript*, 78.

near future. “The bearer of this llama is very fortunate. Paria Caca loves him.”¹⁶³ During another festival, called Machua, people were throwing spears on two effigies which presented a male and a female. Hitting the target on a certain spot, the thrower was permitted to give a llama to the yanca and said: “With this offering, speak on my behalf to Uma Pacha.”¹⁶⁴ I mentioned Uma Pacha in the afterlife chapter. To this place or huaca a prisoner of war was supposed go back, after he was made into a mask. During the Machua festival, this Uma Pacha was clearly a huaca, since people worshiped him. More importantly is the aspect of the competition in Machua and Auquisna. People would compete by racing each other or by spear throwing, to enhance their chances of getting their wishes fulfilled or higher blessings. This is a personal aspect during the worship of the great huacas, but it is an addition to the whole obligated festival and not the main focus.

The content of the manuscript indicates that, people in Huarochirí were forced by their culture of reciprocity to participate in worship and thereby rituals. To refrain oneself from rituals could mean personal despair in the future, as the huacas would punish or refuse to give necessary favors (e.g. rain, fertility or protection).

2.3.3 Freedom in Worship

There are examples for worships, which people conducted according to their own will. One such example is described in chapter 10.

There was a certain male on the mountain that overlooks Mama, a huaca named Rucana Coto.²⁹¹ Men who had small cocks would implore Rucana Coto, thinking to themselves, “It’ll get big.”¹⁶⁵

I count that as a freedom in worship. I assume that the initial motivation came from the man, if I restrict myself from the idea that his wife had sent him there. Even in this case I would count it as a personal choice to invoke the huaca, although the choice would be made by the wife. As this example further implies, particular problems were not covered by the official huaca worship during the festivals. Or at least the believer evaluated them as insufficient and could therefore implore minor huacas and ask them for help.

¹⁶³ Salomon and Urioste, *Huarochirí Manuscript*, 72.

¹⁶⁴ Salomon and Urioste, *Huarochirí Manuscript*, 123.

¹⁶⁵ Salomon and Urioste, *Huarochirí Manuscript*, 78.

I already mentioned chapter 13 above, and the worship held because of sins and resulting illnesses. It is a description of two huacas, which according to the author were sisters to Chaupi Ñamca. Their names were Llacsá Huato and Mira Huato. The manuscript tells us that people would not implore them according to an annual schedule, but visited them when they had personal reasons to do so, or just "... to have their presence noticed, saying, "I'll go" or "I'd rather not" according to their whim."¹⁶⁶ Another already mentioned example is the making of the mask, the so called huayo, described in chapter 24. It appears to be a freedom to transform a war prisoner into a sacred mask. But the text is not clear on this point. It could have been a cultural tradition which was not based on personal desires. Rather the community was involved in motivating the sacrifice, because the group was at war and needed every kind of support on their side. This ritual can be seen as standing between freedom and obligation. What at first glance looked as a simple example for personal freedom turns out to be much more complex. I included this example here in the interest of the picture I try to create, which should be as exhaustive and accurate as possible.

There are many more illustrations of obligations with regard to rituals in the text than there are freedoms. This in itself is already a statement for a society with little personal freedom in worship. But I will give one last example of freedom, described right in the beginning of the manuscript. It is a description of the old days and the author intended to demonstrate the similarity in character between two huacas (Vira Cocha and Cuni Raya), which are named in the chapter. One can read what the ancients did:

And so, long ago, when beginning anything difficult, the ancients, even though they couldn't see Vira Cocha, used to throw coca leaves on the ground, talk to him, and worship him before all others, saying,

Help me remember how,

Help me work it out,

Cuni Raya Vira Cocha!¹⁶⁷

"Even though they couldn't see him", could mean that this ritual was performed away from the huaca. A small offer of coca leaves and a prayer to the huaca constituted a personal ritual which was intended to help the performer. The idea of invoking a huaca for personal reasons is noticeably as in the former examples. But since it was the only example in the whole

¹⁶⁶ Salomon and Urioste, *Huarochirí Manuscript*, 86.

¹⁶⁷ Salomon and Urioste, *Huarochirí Manuscript*, 45.

manuscript describing such a behavior (worship away from the huaca), which is also explicitly connected to the “ancients”, it have to be used with care in the later conclusions.

In the framework of the religion described in the Huarochirí Manuscript, people were bound to scheduled worship festivals which they couldn't omit. However, certain huacas were available for personal rituals, conducted at times which seemed appropriate for the believer.

2.3.4 Worship Reality in early 16th century

Most traditions and worships described above, relate to a time when the people in Huarochirí were still used to perform them without the shadow of a Spanish presence. The author wrote often at first about the old times and would then add information about the contemporary situation. The old time could have been, pre-Inca or pre-Spanish but also as e.g. in the chapters 9, 20, and 24 the time before and after Avila's appearance and work in the region; hence old time from the author's point of view could mean twenty years ago.

Previously, information from the manuscript was used in research to create a picture of Inca society and even pre-Inca society; as I mentioned above. Yet, one should not forget that these ritual descriptions are collected in 16th / 17th century and therefore people in Huarochirí knew about them. What is even more interesting, based on the information from the sources they continued to perform rituals according to their tradition and more importantly so, according to their belief system. A good example (already described above) is described in the chapters 19¹⁶⁸ and 23¹⁶⁹; a myth is told about the origins and veneration of a huaca Maca Uisa, the son of Paria Caca. His story begins in the Inca times. The Inca Tupay Ynga Yupanqui requested support from his huacas in a war campaign, and Maca Uisa agreed to help him. After the Spanish invasion, this huaca was transferred to the town Limca, and later from there to Llacsá Tambo, where people would offer to him. The author started his story with the origins of a huaca in past times and ended with statements about his contemporary times. Both, the history of the worship itself and the statements about the actual worship situation constitute a significant element which contributes to the understanding of this culture. What follows is a complementation of the examples given above in this chapter with the commentaries of the author of the manuscript who describes, if, how, and when people would perform these rituals.

¹⁶⁸ Salomon and Urioste, *Huarochirí Manuscript*, 99,100.

¹⁶⁹ Salomon and Urioste, *Huarochirí Manuscript*, 114.

The manuscript tells us that the great worship festivals were rescheduled to coincide with Christian worship occasions. Auquisna, the Paria Caca festival, was celebrated after the invasion at or around Corpus Christi.

Nowadays the Auquisna season ... comes in the month of June or close to it. It either occurs close to ... [Corpus Christi] the great pasch or actually coincides with it. All huacas, who might be ten or even twenty, dance on this occasion.¹⁷⁰

Similarly, Chaycasna, the festival of Chaupi Ñamca, was also scheduled around Corpus Christi. The huacas had to perform dances during these and other festivals and the author in describing and thereby proving the continuous existence of traditional Andean worship in early 17th century, tells us about further festival periods.

We know people schedule Chaupi Ñamca's rites during the month of June, in such a way that they almost coincide with Corpus Christi.¹⁷¹

Finally, in the month of November, just about coinciding with the festival of San Andrés, they'd perform still another dance called Chanco.¹⁷²

In connection with an annual canal cleaning a ritual was performed by the Cupara people in the village of San Lorenzo, which ended with the participation of all communities around the village. It shows that some people still perform the ritual and others don't. According to Salomon, the "good padre" named in the quote is most probably Avila as the author expected him to read the text.

In fact today people who are in the know about these practices still do the same thing and perform the same rites when they clean the canals. Even now, no matter how people behave, neither the *alcalde* nor anybody else would ever try to stop them by asking, "Why do you do these things?"

On the contrary, they dance and drink right along with them until they get drunk. And as for the Catholic priest, they would fool him, saying, "Padre, I'm back from cleaning the canal, so I'm going to dance, I'm going to drink."

As far as that goes, all the people do the same thing.

True, some don't do it anymore because they have a good padre.

But others go on living like this in secret up to the present.¹⁷³

In connection with another ritual, regarding a huaca called Anchi Cara and his children, people would offer some coca leaves and then perform a more complex ritual involving a

¹⁷⁰ Salomon and Urioste, *Huarochirí Manuscript*, 72.

¹⁷¹ Salomon and Urioste, *Huarochirí Manuscript*, 78.

¹⁷² Salomon and Urioste, *Huarochirí Manuscript*, 78.

¹⁷³ Salomon and Urioste, *Huarochirí Manuscript*, 65.

llama sacrifice. The author tells us that they still perform these rites today, even if modified. “In the old days they performed worship with a llama, but now that they don’t have llamas anymore, they worship with just a guinea pig, some *ticti*, or whatever else they have.”¹⁷⁴

Describing a divine command, the author tells us about a ritual which involves coca producer. In the following quote, the author repeats the speech of the huaca Paria Caca to his son Chupui Huampo, who because of a fight with another huaca had a broken foot and volunteered to stay on a certain place in order to keep watch.

He gave his command; “All the inhabitants of these two valleys must give coca to you first, before any of them may chew it. Only after you have chewed it shall the people chew coca from their harvest. Also, the people are to slaughter a llama in your honor, one that is still childless, one that has never given birth. And you shall always eat its eartips and other such things first, before the rest may be eaten.” ... They carry on the customs secretly to this day.¹⁷⁵

Another example describes how some people, although Christian on the surface would still invoke the old gods.

Some people, although they’ve become Christians, have done so only out of fear. “I’m afraid the priest or somebody else might find out how bad I’ve been,” they think.

Although they say the Rosary, they still carry some pretty illa amulet everywhere; although they themselves might not worship these native divinities, they contract some old people to worship in their stead. Lots of people live this way.¹⁷⁶

A similar example expresses how people adjusted to the new times.

Remembering those meals for the dead, people who hadn’t yet sincerely converted to Christianity are known to have said, “The Spaniards also give food to their dead, to their bones, on All Saints’ Day, they do feed them. So let’s go to church. Let’s feed our own dead.”¹⁷⁷

In Huarochiri and also in Quinti, people say on All Saints’ Day, “Let’s leave some nice warm food for the dead alongside the church” and they cook up some warm potatoes and pieces of jerky well seasoned with red pepper, and also toasted maize [...]¹⁷⁸

The last two examples describe a change in rituals which I will discuss further down in the next chapter. For now, their purpose is to finish the inquiry about actual worship performances during Avila’s times and to show that some Andean worship traditions, even if

¹⁷⁸ Salomon and Urioste, *Huarochiri Manuscript*, 131.

changed, were continued in some ways. I believe I could show that there is sufficient proof for the continued worship during the transformation times in Peru.

The examples above confirm Osterhammel. We recognize syncretism but also the powerful influence of the Catholic Church and the priests, as people hid their belief and disguised it. There is however, no information about employed force or violence by the church. This is explained by the purpose of the manuscript and its creation circumstances.¹⁷⁹ Osterhammel stated that the Catholic Church in Spanish colonies was “a powerful instrument of cultural penetration”¹⁸⁰ which I described above in the chapters 1.3.5 (Authorship of the Huarochirí Manuscript) and 2.1 (The Christian Case).

To make a sincere statement about worship freedoms and obligations of natives during the transition period in Huarochirí required elucidating several aspects. These are the force behind obligations, examples of rituals which are obligated and those which were performed due to one's own will, the “original” performance of the rituals, and the actual (late 16th and early 17th century) performance. The Christian influence is recognizable in many examples given above. Festivals were rescheduled and their dates matched with the celebration of official Christian events. People would hide their belief in huacas by performing Andean rituals secretly or even paying old people to perform rituals for them. Another aspect worth consideration is the geography of Huarochirí.¹⁸¹ The invaders couldn't cover the vast area of the Andes at once, even seventy years later this was not possible. Remote and isolated locations complicated the missionary work of the priests. Therefore, the Spanish concentrated groups of people in new founded towns in easily accessible places.¹⁸² They also punished groups of people which disobeyed the Christian rules and resettled and concentrated them in new settlements. “In extremen Fällen kam es in Peru zur Umsiedlung, oder auch, je nach den Gegebenheiten, Konzentration der Bevölkerungsgruppen, die sich schuldig gemacht hatten.”¹⁸³ Yet, as shown in the manuscript, people continued with different intensity to perform Andean rituals.

¹⁷⁹ As described above in chapter 1.3.

2.3.5 Summary

With the beginning of my research efforts, I predicted an answer which could be produced by simply adding information extracted from the text. However, the analysis revealed a very complex nature of the culture during the transition period. People had just lost parts of their ancestor traditions but hadn't been fully Christianized yet. In other words, people still performed original Andean rituals, while they also started to practice Christian rituals. Moreover, the word "some" should be included, because some people still performed Andean rituals, some already performed only Christian rituals, and some did both. Furthermore, with regard to the question about freedoms and obligations, some people, had to respond to the huacsa and yanka orders in accordance with their old tradition and the system of reciprocity, while others were forced by church officials to partake in their rituals, and again and I believe based on the results of the analysis, a majority were tied up in both religions.

These results left me with the conclusion of the impossibility of a statement about freedoms and obligations of an individual in a narrow sense. However, it is possible to describe and thereby understand in which situation people during the transition period were. The ancient system of reciprocity which constituted the ritual obligations to a high degree was still a custom for many. With the examples above, I described how people still performed rituals, how they changed some rituals and even paid others to satisfy their ancient obligations at least to some extent. Many annual customs as e.g. the Paria Caca festival were disguised as Christian events, in order to keep their tradition alive. Overall, obligation came from both sides, from the Christian and the Andean original religion. I assume that the obligation to conduct Andean rituals was partly broken when the local huacsas and yankas were imprisoned or worse. It meant also that people were left to deal with their convictions by themselves. In that case, the original priestly guidance was gone and the natives would precede or stay away from Andean ritual, depending on the intensity of their belief. It was strong, as some examples show us, but with ongoing Christian education and passing time, the intensity faded more and more. On the other hand, disappearing Andean worship obligations were replaced by Christian obligations. The same could be said about worship freedoms in this period. There are described rituals which were performed according to one's own will, needs and desires; but with increasing Christian pressure, they were less and less conducted. And of course, Christianity offered its own way of dealing with personal crises and wishes, you simply just had to pray. Plus, there were also Christian rituals, which promised to liberate from sins.

(This is the blossom! Victory!)

3 Conclusions

In the previous parts I scrutinized religious elements in the culture in Huarochirí in the late 16th and early 17th century, as they are described in the Huarochirí manuscript. The results of these inquiries are now forged into a picture which should describe characteristics of indigenous Andean religion. The first characteristic was the concept of the afterlife and resulting consequences for the living. I revealed two basic notions within afterlife thoughts. People believed in a fly like object that contained the essence or soul of the deceased. They also believed that this object would return to the place or huaca from which it came. This also implies that people might have thought of this object as coming from this huaca or place when a human was born. But there is no statement about such thoughts in the text. The second important aspect of the afterlife concept was the preparation of the dead. The physical part of the dead would be dressed and fed regularly and lived (from a native believer point of view) in caves or special dead houses. The contrast between the fly like object and the physical remains is obvious. One can speculate if the fly like object is the life force of the humans which returns to the deities with the death of a person; and the body is left without physical powers but still contains a transcendent aspect which consists of the person's characteristics and supernatural powers. But the manuscript doesn't give further information which leaves this speculation without any support. But another thought is well described. People had rules which, when broken, could lead to misery and bad fortune. What these rules looked like is unclear and not discussed in the scripture. But accurately performed rituals as well as ancestral care belonged surely to a possible list of rules with prohibitions and commandments. While this has to be *concluded* based on the information in the text, *there are* descriptions for people, fearing the consequences of committed sins, regardless if they or the deceased inflicted them. It followed that rituals were performed in order to redeem oneself and the

deceased. Finally, I have to emphasize again that in late 16th century the society was not unanimous in keeping the Andean faith. Some natives were already committed to Christian belief, while some people still performed rituals of their ancestors, and as I wrote above, some did both.

Freedoms and obligations in worship were the theme for the next part of my analysis. I concluded that people in Huarochirí during the transition period were affected by the changing religious system and that obligations and freedoms shifted from huaca to Christian religion. As the Catholic Church forcefully demanded worship for the Christian god, the huacsa and yanca influence was diminished and believers were to some extent prevented from worshipping the Andean deities in the old fashion way. As shown above, the manuscript contains a number of examples which proves the continuation of huaca worship, and Andean religious traditions existed parallel with the Christian supremacy. Originally, this Andean worship was sustained by the system of reciprocity. It was imprinted in the culture and everyone was part of it; from the king to the beggar, from the human to the god. Life sustaining deeds from the huacas had to be paid with offerings and worship.

As the performance of these rituals became more and more dangerous, people responded with hiding their belief and religious performances. Major worship festivals were rescheduled, to disguise traditional worship with Christian celebrations. Other rituals were disguised as a festival for the completed cleaning of a water canal, or the dead were fed on All Saint's Day by storing food and drinks on the churches and graveyards. I also presented some cases of voluntary rituals, performed in order to be helped, blessed or guided. The wish for a penis enlargement is surely a personal desire. With growing pressure of Christianity, these rituals surely had to be hidden or disguised as well. However, in the same way as the obligations were shifting from huaca to the Christian god worship, freedoms were shifting too. Natives could now pray to God and ask him for protection or other things, whenever they desired it. Overall, worship freedoms and obligations existed in pre-Spanish times as well as thereafter. But worship obligations in connection with the huaca religion had a greater economic impact, as people had to prepare food, drinks and other offers. With regard to this aspect, Christian worship meant theoretically an improvement. Practically, based on the example of Avila, it was often the opposite. The Christian priests expected payment from the locals and support for their personal income and church related projects. The greed of some priests had nothing to do with religion, but in order to satisfy it, they used religion and their position as religious leaders within society. In the end, it seems to me that to sacrifice a llama or two in a year, or

whatever was economically possible, was not at all as costly as the greed of some Catholic Priests. Combined with the beginning colonialism and general exploitation of the natives, worship obligations probably doubled at first for those who practiced both religions. But with growing Christian pressure huaca worship decreased further and became a lesser aspect in people's lives.

Osterhammel barely mentioned the colonial efforts of the Spanish in South America and when writing about the Spanish chose the example of Central and North America. But his theoretical frame for colonialism can be applied for the Andean case. Osterhammel wrote that colonial influence "seldom led to a complete collapse of pre-colonial cosmologies and ways of life, but always to its "destructuring" into fragments or at least to a challenging of cultural values..."¹⁸⁴ This statement is validated by the examples above, ritual behavior in Huarochirí didn't just vanish, it changed, was syncretized with the new belief; it simply adapted to the new life circumstances.

The existence of the manuscript and how it was used by the church is one proof to Osterhammel's statement that the Spanish interfered in indigenous culture to a high degree, which is one possible colonial behavior, according to Osterhammel.

Osterhammel further described the notion to manipulate native symbols to facilitate conquests of unknown lands. It becomes clear in the manuscript that this manipulation was also practiced after the conquest in order to convert the indigenous people to Christianity. I gave the example of Don Christóbal, who fought an evil demon, which was previously venerated by the natives as the huaca Llocllay Huancupa.

To my understanding the Huarochirí Manuscript, with its contained information as well as its creation circumstances and purposes, is a valuable source for knowledge about Andean life in the transition period in 16th and 17th century. With help of Osterhammel's theory I was able to place my work in a wider theoretical frame which supported the validity of my results.

3.1 Discussion

Overall, based on the Huarochirí Manuscript it is possible to elaborate a picture of religious cultural aspects in this Andean region. Yet, although the stories present accurate descriptions

¹⁸⁴ Osterhammel, *Colonialism*, 95.

of religious myth and rituals, this information alone is insufficient with regard to a complete understanding. Therefore it is necessary to complement the information given in the manuscript with previous research to understand the context of the manuscript's creation and native life circumstances at the time. In previous research, scholars included examinations of other sources from this period. These sources are almost all written from a Spanish or Christian point of view and a tendency within is obvious. But since the motivations behind such tendencies are clear in many cases, these texts can be examined too.

There are uncertainties in this research, which cannot be eliminated. The translation into English, although done with utmost care, contains still doubts about some words or formulations. The Quechua from today is also not the same as in the manuscript and hence presents another obstacle for scholars. Still, I find the translations valid for my very purpose. Some of the stories, whether collected by friendly asking or torturing could be purposely falsified in order to protect a huaca or place of worship. With a qualitative content analysis I did hope to compensate such faults. This, however, gives always room for misinterpretation. To minimize this effect, I incorporated other research. As other research was often conducted over years and complemented with a large number of sources, it was very helpful to establish validity, at least to some degree.

The transition period with regard to religion in Huarochirí ended probably for the most people with the missionary efforts of Avila shortly after 1608 and his lawsuit. Documents reveal his way through the Andes and his trail of destroyed huacas and tortured people. Nonetheless, with regard to traditional worship, people were differently influenced and what ended shortly after the Spanish invasion for some, might have lasted much longer for others. Furthermore, the different expressions for catholic belief recognizable in today's Andes are proof of surviving aspects of pre-Columbian traditions. It would be interesting to reconstruct Avila's way through Huarochirí and to follow this trail to find out if some of the old traditions, described in the manuscript, survived the last 400 years. Are there huacas transformed into lucky charms, or little so called superstitious rituals, which have their origins in huaca worship? Is there perhaps a deep rooted distrust towards church and government officials still recognizable in regions with high percentage of Native Americans, or maybe not? Are there political movements influenced by the idea of huaca worship revival, resembling Taki Onqoy?

One of the reasons for this essay was to collect information about the Peruvian past in preparation for my upcoming master thesis. However, it is easy to theorize about another culture from an armchair perspective, as many 18th century orientalist desktop warriors proved. Their work, highly recognized in western society, and still influential to some extent today, was describing religious phenomena based on texts which had often little to do with true religious life. But the Huarochirí Manuscript seeks to describe worship reality and not theological thoughts of religious elites. Hence, I do feel prepared to enter the Andean world and looking forward to meet the descendants of the huaca culture.

Appendix

Ayllu

As Salomon, Dedenbach-Salazar Sáenz and Prem emphasize, there is no exact scientific definition or description of an ayllu yet. So far one can assume that it was a group of people, who were connected to each other (most probably by blood relation), who owned the right to cultivate their own land or exploited other productive resources, or even were specialized in different crafts (e.g. silversmithing). They probably had their own huacas and villcas and specialists for religious rituals. More than one ayllu could exist in one village and they are also seen as the lowest form of political power in the Andean precolonial society.¹⁸⁵

Huaca

It is interpreted by Salomon as superhuman being and also used in connection with religion, as in huaca religion.¹⁸⁶ Described by Salomon: “A huaca was any material thing that manifested the superhuman: a mountain peak, a spring, a union of streams, a rock outcrop, an ancient ruin, a twinned cob of maize, a tree split by lightening.”¹⁸⁷ People sacrificed to the huacas but also created new ones by burning children and youths alive or by mummifying their dead leader or high ranked officials.¹⁸⁸

Villcas

Salomon has no clear interpretation of the word villca. It could be a human who by achievement or marriage enters the circles of the huacas. It has a similarity to a contemporary Aymara word, meaning sun or shrine. A mummified ancestor could also be a villca.¹⁸⁹

Huacsas

Huacsa was a form of huaca priesthood. The title was not hereditary and people were often appointed in a rotary system within an ayllu or kinship. They impersonate the great huacas during festivals and reenact myth.¹⁹⁰

¹⁸⁵ Salomon and Urioste, *Huarochirí Manuscript*, 21,22; Dedenbach-Salazar Saenz, “Die Stimmen von Huarochirí,” 9; Prem, *Geschichte*, 240,241.

¹⁸⁹ Salomon and Urioste, *Huarochirí Manuscript*, 46.

¹⁹⁰ Salomon and Urioste, *Huarochirí Manuscript*, 18.

Yanca

Yancas were also a kind of priesthood but with focus on calendric and technical elements in society. They could also function as oracles or mediators. Their office was often inherited and the secrets were passed on from one generation to the next one.¹⁹¹

Yunka

Yunka is a term for the coastal people, which were, according to the manuscript expelled from their territory in Huarochirí by ancient superhuman beings or folk heroes. They are mentioned in this context on several places in the manuscript.¹⁹²

Curaca

Curaca were probably some kind of lord in Andean society with authority over their territory (e.g. town, village, or valley). The manuscript mentioned several by name, but doesn't give further explanation.¹⁹³ In chapter 19 one can read about Don Juan Puypu Tamca the curaca of Llacsa Tambo, who ordered a priest, to bring the huaca Maca Uisa to his town. This reveals a great deal of authority of this curaca.¹⁹⁴

Checa

The Checa were a collective of ayllus which derived their brotherhood from a common mythology which explained their origins with the emergence of the five Paria Caca aspects; as they were the descendants of one of the Paria Caca components.¹⁹⁵

Quinti

The Quinti were also a collective of ayllus which derived their brotherhood from the same genealogical myth, which was utilized by the Checa.¹⁹⁶

PREFACE

Among the various avenues of approach to the investigation of Maya civilization, the study of the native literature of Yucatan is, next to the actual archæological exploration of the remains, one of the most promising, for it contains much of what the Indians remembered of their old culture after the Spanish Conquest.

The Books of Chilam Balam form the most important part of this native Maya literature. Written in the Maya language, they reflect more closely the thought of these Indians than any other records that have come down to us. Not only do they contain a wealth of historical and ethnological information invaluable to the student of the pre-Columbian career of the Maya, but they also furnish a record of the reactions of the native mind to the European culture and of the manner in which the latter was adapted to suit its new environment. It is hardly necessary to dwell upon the value of these old texts to the linguistic student.

The translation of the Book of Chilam Balam of Chumayel depends primarily upon the reading given to the badly punctuated and often misspelled Maya text, and such a reading is based upon an extensive comparison with other similar texts. The difficulties of translation are not to be underestimated, but they can be greatly lessened by such a comparison.

That I have been able to avail myself of the assistance afforded by the manuscripts of the Berendt Linguistic Collection, so often referred to in these pages, is due to the collaboration of the Museum of the University of Pennsylvania and to the kindness of Dr. Horace H. F. Jayne, Director, who has supplied me with the necessary photostats. Professor Alfred M. Tozzer, whose previous extensive survey of Maya literature was the indispensable preliminary to the present work, has given cordial assistance; both he and the Peabody Museum of American Archæology and Ethnology have cooperated generously with the loan of material necessary to the work. Mr. Frans Blom, Director, and the Department of Middle American Research of the Tulane University of Louisiana have kindly loaned photographs of Sixteenth Century Maya documents in their collection, which have proved most valuable in the study of the present text.

Dr. Sylvanus G. Morley has spent much time and thought in going over my manuscript and has offered many valuable suggestions as well as searching out and obtaining related material in Mexico and Yucatan. Mr. Thomas R. Johnson has undertaken the tedious task of copying the drawings in the Chumayel manuscript. Mr. Juan Martínez Hernández has again, as in the past, come to my aid in the elucidation of obscure phrases and badly written

passages in the Maya text. Linguistic data furnished by Dr. Manuel J. Andrade and ethnological analogies suggested by Dr. Robert Redfield will be found acknowledged elsewhere in this book. The manner of editing the Maya text is that suggested by Professor Otis J. Todd, who has assisted me in adapting the methods of classical scholars to this newer field of endeavor. For a number of the text-figures, Alice P. Roys has made copies from photographs and other reproductions. To Librarian John Ridington and Assistant Librarian Dorothy Jefferd, I am indebted for the many facilities afforded by the Library of the University of British Columbia. Throughout the preparation of this work, Dr. Alfred V. Kidder has given generously of his time and attention to the practical problems involved in the task. To all these I wish to make grateful acknowledgment at this time.

THE BOOK OF CHILAM BALAM OF CHUMAYEL

By RALPH L. ROYS

THE BOOK OF CHILAM BALAM OF CHUMAYEL

INTRODUCTION

The Books of Chilam Balam are the sacred books of the Maya of Yucatan and were named after their last and greatest prophet. *Chilam*, or *chilan*, was his title which means that he was the mouth-piece or interpreter of the gods. Balam means jaguar, but it is also a common family name in Yucatan, so the title of the present work could well be translated as the Book of the Prophet Balam.

During a large part of the colonial period, and even down into the Nineteenth Century, many of the towns and villages of northern Yucatan possessed Books of Chilam Balam, and this designation was supplemented by the name of the town to which the book belonged. Thus the Book of Chilam Balam of Chumayel is named for a village in the District of Tekax, a short distance northwest of the well-known town of Teabo.

This Prophet Balam lived during the last decades of the Fifteenth Century and probably the first of the Sixteenth Century¹ and foretold the coming of strangers from the east who would establish a new religion. The prompt fulfilment of this prediction so enhanced his reputation as a seer that in later times he was considered the authority for many other prophecies which had been uttered long before his time. Inasmuch as prophecies were the most prominent feature of many of the older books of this sort, it was natural to name them after the famous soothsayer.

The Books of Chilam Balam were written in the Maya language but in the European script which the early missionaries adapted to express such sounds as were not found in Spanish. Each book is a small library in itself and contains a considerable variety of subject material. Besides the prophecies we find brief chronicles, fragmentary historical narratives, rituals, native catechisms, mythological accounts of the creation of the world, almanacs and medical treatises. Many such passages were no doubt originally transcribed from older hieroglyphic manuscripts, some of which were still in existence in northern Yucatan as late as the close of the Seventeenth Century.² As time went on, more and more European material was added to the native Maya lore. In some of the books not only do we find the ritual of a religion which is a

¹ For particulars concerning Chilam Balam see Appendix D.

² Don Juan Xiu of Oxkutzcab possessed such a book in 1689, and Father Avendaño was still able to learn to read hieroglyphic writing before he went to convert the heathen Itzá in 1696. Cf. Morley 1920, p. 507; Codex Perez, p. 166; Means 1917, p. 143; Appendix D.

mixture of the old faith with Christianity, but there are also translations into Maya of Spanish religious tracts and astrological treatises, as well as notes of events which occurred during the colonial period. In two of these books we even find part of a Spanish romance translated into Maya.¹

The ability of the Maya to write their own language in European script was due to the educational policy of the Spanish missionaries. Although at first they rather admired the Maya for having a graphic system of their own, they were determined to destroy the old manuscripts and eradicate all knowledge of the glyphs from the minds of their converts. The Indians had a great reverence for their hieroglyphic writing which was permeated with the symbols of their old religion, and the friars felt that if they could wipe out this knowledge and substitute for it the European system of writing, it would be an effective means for the complete Christianization of the native population. This should be the easier, since the knowledge of hieroglyphic writing was confined to the priesthood and certain members of the nobility. Diego de Landa, afterward bishop of Yucatan, burned twenty-seven hieroglyphic manuscripts at the famous *auto de fe* in Mani in 1562, and although many of the Spaniards severely criticized him for this, there is little doubt that other missionaries followed his example whenever they had the opportunity.

The chiefs and former priests were ordered to send their sons to the schools established by the Franciscan friars, where they were taught to read and write their own language in European letters. Although some of the more promising pupils were taught Spanish, there does not seem to have been any general policy of attempting to impose the language of the conquerors upon the Indians. In the first place such a scheme was plainly impracticable owing to the comparatively small number of Spaniards in Yucatan and, besides, many of the missionaries frankly admitted that they preferred the local officials of the villages in their charge not to know Spanish.² This was probably in order that the latter should not complain too frequently of ecclesiastical discipline to the lay officials, who were sometimes at odds with the Franciscans. From a purely educational point of view the schools were a success, for after a time every village had its town clerk who could read and write, as well as many members of the more important native families; but the Spanish settlers complained in the latter part of the Sixteenth Century that many native school-masters and choir-masters were still practising idolatry in secret and that idols had even been found in the school-houses.³

If such persons as these were not completely reformed, it is hardly surprising to find the successors of the former prophets and priests, the herb-doctors and sorcerers of colonial times, making use of this new and more convenient graphic system of the white man in the pursuit of their ancient

¹ Chilam Balam of Kaua, pp. 99-117; Codex Perez, pp. 31-37.

³ Relaciones de Yucatan, II, pp. 190, 213.

professions. After Landa's famous bonfire at Mani, it is needless to say that the surviving hieroglyphic manuscripts were kept concealed, although now and then one of them came to the notice of the Franciscans. Seventy years after the Conquest, Aguilar wrote that "in these they painted in colors the count of their years, the wars, epidemics, hurricanes inundations, famines and other events."¹ It is remarkable that not a single one of these books is known to have survived in Yucatan at the present time, for as late as the close of the Seventeenth Century Avendaño was quite familiar with them. In his account of the visit he made to the heathen Itzá at Tayasal he writes: "At the instant that we landed and I saw the said column and mask,² I came to recognize it since I had already read about it in their old papers and had seen it in their *Anahtés*, which they use, which are books of barks of trees, polished and covered with lime, in which by painted figures and characters they have foretold their future events."³ This was Avendaño's first visit to any of the heathen Maya, and he could only have seen such hieroglyphic books as still survived in northern Yucatan.

A comparison of these descriptions with the existing Books of Chilam Balam shows plainly that many portions of the latter are simply transcriptions of the old hieroglyphic manuscripts into European script. Aguilar mentions one of these early transcriptions which was written in a copy-book and contained an account of the creation of the world. He confiscated this book from a choir-master of the town of Sucopo.⁴ As time went on, the transcriptions gradually took the place of the older hieroglyphic books. Fewer people were now able to read the glyphs, and much as the clergy condemned the Books of Chilam Balam, they were not considered such *prima facie* evidence of the crime of idolatry as was anything written in hieroglyphics. Aguilar also tells us how in their assemblies the Indians read the fables and histories contained in the books. Some of the contents were chanted to the accompaniment of a drum; old songs were sung;⁵ and the dramatic representations, the names of which we find listed in the Motul dictionary, were enacted.⁶ Cogolludo later wrote of such meetings that "God knows what goes on there, and at the very least many of them end up in drunkenness."⁷

None of the Books of Chilam Balam that have come down to us were compiled earlier than the last part of the Seventeenth Century, and most of them date from the Eighteenth Century. The older ones were probably worn out by constant use. Nevertheless we have Maya legal documents covering almost

⁴ Sanchez de Aguilar 1900, p. 115. Cf. p. 98, note 2 of the present work.

⁵ At least one such song will be found in Chapter XII of the Book of Chilam Balam of Chumayel.

⁶ Sanchez de Aguilar 1900, p. 98.

⁷ Cogolludo 1868, Bk. 4, Chap. 5, translated in Means 1917, p. 14.

every decade from the year 1557 down to the present time, and a comparison of the language of these with that of the Books of Chilam Balam shows that many passages of the latter were copied verbatim from Sixteenth and early Seventeenth Century originals.

At the present time we have photographic reproductions of the Books of Chilam Balam of Chumayel, Tizimin, Kaua, Ixil, Tekax and Nah as well as copious extracts copied from the Mani and Oxlutzcab manuscripts. The latter were made by Dr. Hermann Berendt and are now in the Berendt Linguistic Collection of the Museum of the University of Pennsylvania. This scholar also made copies of the Chumayel and Tizimin manuscripts about sixty years ago, when they were in better condition than when the present photographs were made. Consequently a complete transcription and translation of the texts can only be made with the aid of these copies. Tozzer gives the names of four others known by reputation only: the Books of Chilam Balam of Nabula, Tihosuco, Tixcocab and Hocabá.¹ Genet and Chelbatz give a brief description of a Book of Chilam Balam of Telchac.²

Of these books the Chumayel, Tizimin and Mani manuscripts have the greatest value for the study of Maya civilization, although the others are not lacking in interest. The Chumayel was a small quarto volume which appears to have originally consisted of fifty-eight numbered leaves. There are only 107 written pages in the University of Pennsylvania reproduction. Three leaves, numbers 1, 50 and 55, are missing, and there are breaks in the text at these places. The other pages seem to have been blank. The writer has seen only the leather cover, in which a hole had been burned; the book itself had disappeared. A number of the leaves are either torn or have crumbled away along the edges, and some of the pages are badly water-stained in places. Nevertheless the manuscript is very legible on the whole. Although it dates only from the year 1782, the language suggests the Seventeenth Century much more than it does the Eighteenth. The book contains comparatively little of the intrusive European material which predominates in other Books of Chilam Balam written at so late a date. The drawings which illustrate the volume are quite European in character, although many of the ideas which they represent are purely Maya.

Brinton was the first to make a translation of any considerable portion of the Chumayel. Using the Berendt copy of the text, he translated the three chronicles found in Chapters XIX, XX and XXI of the present work.³ Martínez Hernandez has published his own Spanish translations of these chronicles, also the story of the Last Judgment in Chapter XXIII and the first part of the creation narrative in Chapter X.⁴ Tozzer has translated the prophecy of Chilam Balam in Chapter XXIV and the chronicle in Chapter XX.⁵ The writer

⁵ Tozzer 1921, pp. 120-135.

has published translations of Chapters II, IX and XIII,¹ and the entire manuscript has been freely rendered into Spanish poetical prose by Mediz Bolio.²

We know from internal evidence that the Chilam Balam of Chumayel was compiled by Don Juan Josef Hoil of that town, as we find his name signed to a notation written in the same hand as the rest of the book and dated 1782.³ Only a few interpolations added at later dates are written in different hands. Subsequently the book passed into the possession either of a certain unnamed priest or of his secretary, Justo Balam, who inscribed two baptismal records on one of the blank pages in 1832 and 1833.⁴ In 1838 Pedro de Alcantara Briceño of San Antonio made a record on the same page that he had purchased the book "in his poverty" for the price of one peso, probably from a priest, although the writing is very indistinct. It is possible that the priest was Don Diego Hoil, the son of the writer. On another blank page⁵ the same Pedro Briceño noted that he made a loan of the book. The date here is badly written, but it is probably 1858. Some time during the next ten years it was acquired by Don Audomaro Molina, how or where, we do not know; but the latter stated to Sr. Martínez Hernandez in 1910⁶ that he had given it to Bishop Crescencio Carrillo y Ancona. It was already in the Bishop's possession when Dr. Berendt copied it in 1868, and he permitted Teobert Maler to make the first photographs of it in 1887. When Bishop Carrillo died in 1897, the book passed into the hands of Don Ricardo Figueroa, and through the efforts of Sr. Molina it was loaned in 1910 to George B. Gordon, Director of the Museum of the University of Pennsylvania, who photographed it the same year. In 1913 the Museum published the handsome facsimile reproduction from which the present translation is made. The original was returned to Figueroa, in whose house Dr. S. G. Morley saw it in 1913. After Figueroa's death the manuscript was removed in 1915 to the Cepeda Library in Merida, but when Dr. Morley visited the Library in 1918 it had disappeared and its whereabouts is still unknown. As Dr. Morley has already noted, "In view of its doubtful fate, it is nothing short of providential that two photographic copies of it exist, the one made by Maler in 1887, a copy of which is in the Gates collection, and the other made by Gordon in 1910."⁷

The attempt has been made to learn something about Don Juan Josef Hoil, the compiler of the manuscript, from the surviving members of the Hoil family of Chumayel, and although he has not been completely identified, the results of the inquiry are not without interest. The writer is indebted to Sr. Martínez Hernandez of Merida for the following information.

There appears to have been but one Hoil family in Chumayel. The present generation consists of Miguel, care-taker at Uxmal; Alejandro, a brakeman on

¹ Roys 1920, 1922 and 1923. ² Mediz Bolio 1930. ³ Cf. p. 143. ⁴ Cf. p. 144. ⁵ Cf. p. 144. ⁶ Martínez Hernandez letter, December 30, 1931. ⁷ Morley 1920, p. 475.

the Ferrocarriles Unidos de Yucatan; Transito and Valentina, all of whom were born at the village of Xul. After much consultation with the various members of the family, Miguel Hoil reported on February 28, 1928, that their father was Epitacio Hoil, who married Cristina Parra and had a brother, Maximo. The grandfather was Juan José Hoil, married to Felipa Mendoza. He could hardly be the Don Juan Josef Hoil who signed the manuscript in 1782, however. The great-grandfather was Damaso Hoil, the natural son of a Doña Guadalupe Hoil, and married to Narcisa Guemes. From his time down to that of Epitacio the family seems to have lived at Tekax. Doña Guadalupe was the sister of Don Diego Hoil, curate of San Cristóbal. This is a suburb of Merida and was an important Indian parish, which indicates that Don Diego was a man of some learning and considerable importance. This would take us back to about the time when the manuscript was written, but unfortunately our information ceases at this point. It seems likely that the Don Juan Josef Hoil who wrote the Chilam Balam of Chumayel was the father of Don Diego, the curate, and of Doña Guadalupe. A search of the records of the parish of San Cristóbal might be rewarded with the confirmation of Don Diego's parentage. If Doña Guadalupe's natural son, Damaso, was brought up in her father's home at Chumayel, it would be most natural that Damaso should give his own son the name of his maternal grandfather.

As to the manuscript itself, the most probable conclusion from the information which we have is that after Don Juan Josef Hoil's death it passed into the hands of Don Diego and that he was the priest who sold the book to Diego Briceño in 1838.

Needless to say, the Book of Chilam Balam of Chumayel is difficult to translate, although the spelling is better on the whole than that of some of the other manuscripts. As Professor Tozzer has noted, many words are separated arbitrarily into syllables, the same word sometimes being divided in several different ways on the same page.¹ Some passages are logically arranged in paragraphs, which is a great help, but many are not. There is little division of the text into sentences, and a capital letter rarely begins either a sentence or a proper name. Consequently it is necessary to establish a critical text before attempting a formal translation.

The greatest difficulty of all is found in the numerous obsolete words and phrases which occur. It has already been noted that the Chumayel is a compilation made from various earlier works, many of which were probably copied from still older books. This would account for an occasional corrupt text, which can often be rectified from parallel passages or similar stereotyped phrases occurring in the other writings. The meaning of obsolete words and phrases can be learned in three ways. They may be found in the older dictionaries which were written at a time when they were still in use; a more

¹ Tozzer 1917.

modern Maya expression or even a Spanish word is sometimes substituted in a parallel passage in another manuscript; and when other means fail, the use of the same word or expression in a number of different contexts will cast considerable light upon the meaning. Sometimes the Maya writer of a manuscript will even explain the significance of an obscure term which he thinks his readers might not understand. For an explanation of the many proper names found in the Chumayel, especially those of deities, we are obliged to rely largely on the Spanish source material such as Landa, the *Relaciones de Yucatan*, Cogolludo, Aguilar and Lizana. This information may be supplemented by the reports of such modern ethnological investigators as Tozzer, Redfield, Thompson and Gann. Many unfamiliar words not found in any Maya dictionary have turned out to be plant-names. These will be found in the Maya medical literature, and a great many of them have been identified by the botanists.¹

It has been suggested that a modern Maya Indian should be of great assistance in translating these old books, but none of the few efforts which have been made along this line of inquiry have had much success. The vocabulary of the average Indian is limited. Many words are now used with a changed meaning, and he is entirely too ready to resort to a typical *Volks-etymologie* to explain any word which has now passed out of current use. This is evident from the explanations made by natives to the botanists in the case of plant-names composed of obsolete words. The errors of such native derivations are amply demonstrated by the Sixteenth Century Motul dictionary, in which many of these old words are found. Up to the present a little has been done in this respect with the native Maya priests, or *h-menob*, some of whom can still recite a number of the old incantations. Such men would be likely to rely more on tradition than on their own improvised etymology. Dr. Redfield's elucidation of the puzzling name of Ah Muzencab, the bee-god, from the explanation of one of these native sorcerers is an example of the results which may be looked for from this line of inquiry. Needless to say, it is difficult to persuade these native priests to explain their rituals.

Doubts have been expressed in the past as to whether it was possible to translate some of the passages in the Book of Chilam Balam of Chumayel. Such scepticism was not unreasonable in view of the limited amount of related material accessible to the student at the time. In more recent years, however, additional manuscripts have been collected, and photographs or photostats have been made of nearly all the Maya writings known to be in existence. The archæological evidence uncovered in the course of the past few years and the reports of modern ethnologists have furnished explanations for a number of the obscure statements found in the Books of Chilam Balam. In view of these facts a translation of these books seems feasible at the present time; but there is little doubt that further search among the archives of Spain

¹ Roys 1931; Standley 1930.

will bring to light additional reports on the natives of Yucatan, possibly some of the lost source material known to have been written by the early Spanish missionaries. Also the discovery of more Maya manuscripts and the results of further archæological and ethnological investigations should furnish an answer to many of the problems as yet unsolved. Another source of information should be the thorough study of the more closely related languages of the Maya stock. It seems likely that at least some of the obsolete words in the Books of Chilam Balam will be more fully explained by similar terms which have survived in the other languages.

PREFATORY NOTE TO THE MAYA TEXT

Like the other Books of Chilam Balam, the Chumayel manuscript is written in the European script which the Sixteenth Century Spanish missionaries adapted to the Maya language of Yucatan. It differs only in a few particulars from ordinary Spanish script. The letters d, f, g, q and r are not employed in writing Maya words, as the sounds which they represent do not occur in Maya. Some Maya writers substituted ij for ii, but neither the Spanish nor the English sound of j appears to be indicated. C is pronounced somewhat like the English k. The other letters have approximately the same sound as in Spanish except for the following, which represent sounds which do not occur in Spanish, *viz.* pp, th, ɔ ch and k. The writer is indebted to Dr. M. J. Andrade for the following description:

"These sounds are very familiar to those who have studied the Indian languages of North America, where they are at present represented respectively by the phonetic symbols p', t', ts', tc' and k'. They are the so-called glottalized or fortis sounds. It is difficult to convey an idea of the acoustic effect of these sounds to those who have never heard them. Roughly speaking, it may be said that Maya pp and th are emphatic articulations of Maya p and t, and that a similar correspondence exists between the series ɔ, ch, k, and tz, ch, c. A careful enunciation of the k-sound, however, does not affect our ears as a mere emphatic articulation of the Maya c, but that is also the case in other Indian languages in which this sound occurs. In Maya these fortis sounds are not articulated as energetically as in many North American languages, particularly in those of the Pacific coast. On the whole they may best be compared with the corresponding sounds of the Dakota Sioux, although with many Maya speakers they are so weak that the untrained ear can not distinguish them from the unemphatic sounds."¹

In writing the double vowels, Maya writers are frequently inconsistent, although the compiler of the Chumayel is less so than most of them. They sometimes write them with a single vowel. Of these Dr. Andrade states that the sound is—

"two moras long with a fall in pitch on the second half if it is a double vowel. In current usage there is no articulation of two separate vowels, but a continuous vocalic sound. This throws light, I think, on the discrepancy found in the manuscripts. If

¹ Andrade, letter of January 12, 1932.

this phoneme was even in earlier times a single vocalic sound with double quantity, we can readily see that the use of two letters for its orthography was somewhat artificial, and in this, as in all artificial spelling, individuals are more likely to make mistakes."

We find in the use of certain letters an inconsistency that is somewhat similar to that found in many of the Spanish manuscripts of the colonial period. Since a consistent notation is desirable in the present edition of the Maya text, the writer has followed that of Pio Perez for which there is precedent among both Maya writers and the Spanish authors of Maya grammars, vocabularies and dictionaries. It is the notation of Beltran, except that he writes *p* for *pp*, and of the Motul dictionary, except for the latter's frequent use of *ç* instead of *z*. The following tabulation will explain the present writer's method of avoiding the inconsistencies which occur in most Maya manuscripts.

Present edition

i (vowel)
ii (double vowel)
y (semivowel)
u (vowel and semivowel)
c
z
pp

Variants occurring in Maya MSS.

i, y
ii, ij
y, i, ll' (rare)
u, v
c, qu (before *e* and *i*, rare)
z, ç, s
pp, p

Only one abbreviation is generally used in the Maya manuscripts: this is the character *y*, which stands for *yetel*, a word having the double meaning of "with" and "and." A few manuscripts, chiefly legal documents, substitute for this another abbreviation, *yt*, and only rarely is the word *yetel* written out in full. In the present rendition of the Maya text the writer has followed Brinton's example and transcribed this abbreviation just as it is found in the Chumayel manuscript instead of writing out the word in full.

The text of the Books of Chilam Balam is not divided into sentences, and many portions are not separated into paragraphs. Words are frequently wrongly divided into syllables, and proper names rarely begin with capital letters. Inasmuch as an excellent photographic reproduction of the original manuscript of the Book of Chilam Balam of Chumayel has been published by the Museum of the University of Pennsylvania and is accessible to the student, it has been considered advisable in the present edition to divide the Maya text into such chapters, paragraphs, sentences and words as are called for by the meaning of the subject-matter, and to begin sentences and proper names with capital letters. The method of determining which words are proper names has been discussed elsewhere. The text is often divided into short phrases by colons or dashes. Such punctuation is sometimes inconsistent and even occurs in the middle of a proper name, but it frequently corresponds somewhat to the meaning of the text. For this peculiar system of punctuation, the Maya student is referred to the published reproduction of the manuscript.

We now come to the mistakes found in the manuscript. Juan Josef Hoil was on the whole an unusually careful copyist, and the writer is inclined to

ascribe most of the errors to his sources. As Professor Tozzer has already noted,¹ these texts are probably copies of copies and have been garbled somewhat in passing from hand to hand. In the Chumayel manuscript a garbled phrase is often accompanied by a vacant space, indicating that the copyist was not able to read all the words of his source at that point. In these cases it is often possible to correct the text from a parallel passage in another manuscript. In the case of such a correction, however, the reader is referred to a foot-note in which the corrected word or phrase is given as it is actually written in the manuscript. Sometimes a passage is obscure because of the omission of a word or phrase. When the latter is supplied from another source, it is enclosed in diamond brackets and its source indicated in a foot-note. In some cases where a parallel passage radically alters the meaning of the text, the alternative reading is given in a foot-note.

In transcribing the photographic reproduction of this lost manuscript, the Berendt copy of the original has been used constantly for comparison. This has been especially helpful in deciphering badly written and faded portions of the text, and is indispensable where the edge of a page has crumbled away after the Berendt copy was made. Missing words supplied from this copy are placed in diamond brackets, and the source is indicated in a foot-note.

Misspelled words constitute another difficulty. Many errors are due to a habit of the Maya writer who often employs the letter ç for z and then occasionally omits the cedilla. Such an omission may completely change the meaning of the word. Another error sometimes found is when the Maya writer has omitted the bar from the p (pp) and ch̄. Often these mistakes in orthography can be corrected from a parallel passage, but occasionally the meaning of the context must be depended upon in the case of an obvious mistake or a slip of the pen. Corrections of orthography are referred to a foot-note in which the word is given as it stands in the manuscript.

It is needless to say that a critical text can be established with much more assurance for those portions of the Book of Chilam Balam of Chumayel for which parallel passages can be found in other manuscripts. Such corresponding passages are not absolutely the same. The phraseology differs slightly. Some contain a certain amount of material omitted by others, and an archaic word or phrase in one may be replaced in another by a more modern expression or sometimes even by a Spanish word. Nevertheless the language is sufficiently similar to indicate that they are drawn from a single original source.

Where the Chumayel narrative is not duplicated elsewhere, we are frequently aided by comparison with other texts of the same general character. This is because the Books of Chilam Balam abound in certain stereotyped phrases often employed in similar contexts. When a portion of such a phrase appears to be garbled and we find the same phrase occurring elsewhere in

¹ Tozzer 1921, p. 112.

much the same context, we can make the correction with a fair degree of certainty. In any case the garbled phrase will be found in the foot-note, and the reader is at liberty to draw his own conclusions.

As previously stated, all supplied material is enclosed in diamond brackets < >. Any words or letters believed by the writer to be intrusive are enclosed in square brackets [].

Certain abbreviations have been employed in the notes to the Maya text. These are to be explained as follows:

Ber.=Copy of the Book of Chilam Balam of Chumayel by Dr. Hermann Berendt.
 C=Photographic reproduction of the Book of Chilam Balam of Chumayel.
 K=Book of Chilam Balam of Kaua. (Gates photostat.)
 M=Book of Chilam of Mani. (Berendt copy.)
 O=Book of Chilam Balam of Oxkutzcab. (Berendt copy.)
 T=Book of Chilam Balam Tizimin. (Morley photostat; Maler photograph; Gates photostat.)
 Suppl.=Supplied from

In the present rendition of the Maya text it will be seen that marginal notations have been made showing the corresponding page numbers of the University of Pennsylvania Museum reproduction of the manuscript. Inasmuch as some of the earlier commentaries on the Book of Chilam Balam of Chumayel make references to the actual folio numbers of the manuscript, a correlation of these with the page numbers of the reproduction will be useful. Some of the folio numbers have disappeared, owing to the crumbling away of the corner of the sheet, but the sequence of the text enables us to apply them in the following table.

Manuscript	U. of Penn. reproduction	Manuscript	U. of Penn. reproduction	Manuscript	U. of Penn. reproduction
